EXECUTIVE SUMMARY

SCS Engineers (SCS) was retained by Howard Industrial Partners to prepare a Phase I Environmental Site Assessment (Phase I ESA) of the Harvest Landing project area located near the intersection of Indian Avenue and Orange Avenue (the "Property") in Perris, California. This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries, and in general conformance with ASTM E1527-21.

The Property comprises 116 contiguous land parcels situated near the intersection of Indian Avenue and Orange Avenue. It is bounded to the west by Interstate 215 and its Frontage Road, to the north by undeveloped land and West Placentia Avenue, and to the east by North Perris Boulevard and Barnett Avenue. Indian Avenue, Orange Avenue, and some dirt roads cross and border the Property. Including the area of public right-of-way roads within its outer perimeter, the Property comprises approximately 345 acres (however, the public roads are not part of the Property). The majority of the Property is agricultural land. Val Verde Elementary School (2656 Indian Avenue) is located at the northwestern portion of the Property. There are two single-family residences and associated structures to the northwest and southwest of the intersection of Orange Avenue and Indian Avenue (2304 and 2411 Indian Avenue), along with foundations and remnants of additional former residences in this area. Concrete pads associated with former farmhouse/dairy buildings are located at the northeastern corner of the intersection between Indian Avenue and Orange Avenue.

As early as 1901, the Property was agricultural land developed with a few rural structures, likely small farmhouses. Since that time, most of the Property has been cultivated farmland. Various small residential-type structures and farm outbuildings have been located on the Property. A small cluster of buildings located at the northeastern corner of Indian Avenue and Orange Avenue between the 1930s and 1990s was reportedly a small family-run dairy. Only the concrete pads from the former dairy buildings remain. In the 1960s and 1970s, parcels near the center of the Property, near the intersection between Orange Avenue and Indian Avenue, were developed with single-family residences (2411, 2364, 2381, 2334, and 2304 Indian Avenue). Between at least 1938 and the mid-1990s, a small cluster of structures also located on the eastern side of Indian Avenue, across the street to the southeast of the residences. City directories indicated that between at least 1975 and 1992, this address (21580 Indian Avenue) was occupied by Dick Evans Transportation. The Val Verde Elementary School was developed to the north in the mid-1960s. At times there were unnamed dirt roads and small irrigation ponds on parts of the Property.

The existence of past agricultural activities on the Property and in adjacent areas indicates a potential for pesticide and/or heavy metal (associated with dusting powders) contamination. In SCS's experience, it is not uncommon to find trace levels of pesticides in soils at former agricultural areas in Southern California. However, these trace concentrations are rarely cause for environmental concern. It is our opinion that, without specific evidence of pesticide storage or mismanagement on the Property, past use for agricultural purposes is a *de minimis* condition and collection and analysis of soil samples for pesticides is unwarranted.

Most of the Property is currently fallow agricultural land, with the exception of Val Verde Elementary School on the northwestern corner of the Property, and two single-family residences and associated structures to the northwest and southwest of the intersection of Orange Avenue and Indian Avenue (2304 and 2411 Indian Avenue), along with foundations and remnants of additional former residences in the area. A vacant fenced area at the northeastern portion of the Property was historically used by a nearby business to store finished modular structures (offices, portable classrooms, etc.). No hazardous materials or hazardous wastes were observed at during the site

inspection. No indications of landfilled materials were noted on the Property. No storage tanks are currently located on the Property. SCS did not access the interior of the residences or the Val Verde Elementary School portion of the Property during the site reconnaissance. These access limitations represent a data gap. However, based on observations from the perimeter of these parcels, past experience with similar sites, and the other information gathered as part of this Phase I ESA, SCS does not consider the access limitations to be a significant data gap.

There are four groundwater supply wells located on the Property, one drinking water supply well associated with the 2364 Indian Avenue parcel, and three agricultural irrigation wells (one active and two inactive).

Evans Transportation, a small business historically located at 1936 Indian Street, near the center of the Property was identified in regulatory databases and regulatory agency files as the location of two former fuel underground storage tanks (USTs), one that stored gasoline and the other diesel. The USTs were removed in 1992 and initial testing indicated the presence of total petroleum hydrocarbons (TPH) and fuel-related volatile organic compounds (VOCs) in soil samples collected from beneath the tanks. Approximately 100 tons of soil were subsequently excavated and removed from the former tank pit area to a landfill. Confirmation soil sampling showed remaining TPH concentrations from 15 to 28 milligrams per kilogram (mg/kg) and no detectable concentrations of fuel-related VOCs. The remaining TPH concentrations are far below current regulatory screening levels. On June 17, 1993, the Riverside County Department of Environmental Health (RECDEH) closed the case file related to the leaking UST. Based on the information reviewed and the case status, the past release of TPH from the USTs at the Evans Transportation facility constitutes a historical recognized environmental condition (HREC).

Val Verde Elementary School Additional appears in the California Department of Toxic Substances Control (DTSC) EnviroStor website as a school site. According to the listing, it has been a school site since 1959. Two 1,000-gallon fuel USTs were removed from this school site in 1993 (one gasoline and one diesel). Confirmation soil samples at that time did not show evidence of releases from the tanks, but did indicate that there had been releases from the piping leading to the dispensers. In 2000, additional investigation and remedial excavation activities were conducted at the piping and dispenser areas. A total of 566 cubic yards of gasoline-impacted soil was excavated to a total depth of 31 feet bgs. Confirmation samples showed remaining TPH concentrations up to 27 mg/kg, ethylbenzene up to 0.028 mg/kg, and xylenes up to 0.25 mg/kg. On October 13, 2000, DTSC issued a letter addressed to the California Department of Education. Based on the results of the remedial excavation work, DTSC concluded that no actual or potential hazardous substance release was indicated which would pose a threat to human health or the environment. Therefore, DTSC concurred that no action was necessary with respect to investigation and remediation of site.

Based on the results of the remedial excavation work and the DTSC closure letter, SCS considers the Val Verde Elementary School LUST case to be an HREC. The low concentrations of TPH-g, ethylbenzene, and xylenes in the final confirmation samples are *de minimis* in nature. This conclusion is supported by the fact that DTSC closed the case knowing that the site was a school, which implies no use limitations since schools are among the most carefully regulated facilities in California. No soil vapor data was collected in 2000, which a regulatory agency may have required if the work were done today. While the lack of soil vapor data constitutes a data gap, in SCS' opinion, it does not represent a significant data gap.

Regulatory database information identified few known and suspected contamination sites in the area surrounding the Property. Based on a review of the available information, it is unlikely that any of these sites has negatively affected the environmental condition of the Property.

Conclusions

In summary, SCS performed a Phase I ESA of the Harvest landing project area located near the intersection of Indian Avenue and Orange Avenue in Perris, California, in conformance with the scope and limitations of 40 CFR 312 and ASTM E1527-21. Any exceptions or deviations are described in Section 8 of this report.

In the opinion of the Environmental Professional, this assessment has not revealed no recognized environmental conditions. As discussed above, SCS identified an HREC and access limitations that are not considered a significant data gap. Additional investigation of the Property is not warranted or recommended at this time.

1 INTRODUCTION

SCS Engineers (SCS) was retained by Howard Industrial Partners (the "User") to prepare a Phase I Environmental Site Assessment (Phase I ESA) of the Harvest Landing Project area located near the intersection of Indian Avenue and Orange Avenue, in Perris, California (the "Property"). A location map for the Property is presented as **Figure 1** in **Appendix A**. This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries (AAI), and in general conformance with ASTM International (ASTM) E1527-21.

PURPOSE

This Phase I ESA is intended to constitute appropriate inquiry into the previous ownership and uses of the Property, as required to support the assertion of the innocent landowner, contiguous property owner, and/or bona fide prospective purchaser defenses to liability (collectively, the landowner liability protections, or LLPs) under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA, a.k.a. Superfund), as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA), and the Small Business Liability Relief and Brownfields Revitalization Act of 2002.

The purpose of this investigation was to identify conditions indicative of the presence of hazardous substances as defined in CERCLA Section 101, and petroleum products, in, on, or at the Subject Property due to a release, likely release, or material threat of a future release to the environment.

If known or suspected contamination is identified, a User seeking to maintain LLPs has responsibilities in addition to completion of an AAI-compliant Phase I ESA. These "continuing obligations" include taking "appropriate care" and "reasonable steps" with respect to known or suspected releases of hazardous substances or petroleum products during the term of property ownership. In addition to these requirements under federal law, there are different requirements under state law with respect to liability protections. If warranted, SCS can provide support for clients with continuing obligations, as appropriate.

SCOPE OF SERVICES

This Phase I ESA is based on:

- Interviews with past and/or present owners, operators, and/or occupants of the Property.
- Reviews of federal, tribal, state, and local government records.
- Visual inspection of the Subject Property and adjoining sites performed on November 4, 2024.
- Review of historical Property use information (topographic maps, aerial photographs, fire insurance maps, previous environmental reports, etc.).
- Commonly known or reasonably ascertainable information about the Property (e.g., interviews with appropriate regulatory agency personnel, review of readily available agency files and documents, interviews with other knowledgeable persons, etc.).
- Degree of obviousness of the presence or likely presence of releases or threatened releases of hazardous substances or petroleum products at the Subject Property and the ability to detect releases or threatened releases by appropriate investigation.
- Information provided as a result of the additional inquiries conducted by the User.

- Review of environmental liens, if provided or authorized to obtain by the User.

SPECIAL TERMS AND CONDITIONS

This Phase I ESA for the Harvest Landing project area, located in Perris, California, has been prepared specifically for Howard Industrial Partners. The report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, express or implied, is made as to the professional opinions presented herein.

No other party, known or unknown to SCS, is intended as a beneficiary of this report. Third parties use this report at their own risk. SCS assumes no liability of any kind with respect to such use. Third party reliance letters may be issued on request to SCS subject to approval of Howard Industrial Partners and payment to SCS of a fee for such letters.

LIMITATIONS AND ASSUMPTIONS

The assessment focuses on releases and threatened releases of hazardous substances or petroleum products that could be considered a recognized environmental condition (REC) and/or a liability due to their possible presence in significant concentrations (e.g., above acceptable limits set by applicable regulatory authorities) or due to the potential for contaminant migration through exposure pathways (e.g., soil vapor migration or groundwater ingestion). Materials that may contain substances not currently deemed hazardous by the U.S. Environmental Protection Agency (U.S. EPA) or the California Environmental Protection Agency (CalEPA) were not considered as part of this study.

Unless specifically included in our scope of services, formal surveys for asbestos-containing materials (ACMs), lead-based paint (LBP), water supply plumbing, mold, indoor air quality, and similar matters are not part of this assessment. SCS did not evaluate the Subject Property for compliance with land use, zoning, wetlands, or similar laws. This report is not intended to be an environmental compliance audit.

Hazardous substances naturally occurring in plants, soils, and rocks (e.g., heavy metals, naturally occurring asbestos, radon, etc.) are not typically considered in a Phase I ESA. Similarly, construction debris (e.g., discarded concrete, asphalt, etc.) is not considered a concern unless observations suggest that hazardous substances are likely to be present in significant concentrations.

Unless otherwise noted, sampling and laboratory analyses of soil, water, air, building materials, or other media, were not performed as part of this investigation. Positive identification of hazardous substances can only be accomplished through sampling and appropriate laboratory analysis.

SCS assumes no responsibility for the accuracy of information obtained from, compiled by, or provided by third-party sources, including regulatory agency listings. SCS assumes that information collected during this Phase I ESA is accurate and correct, unless SCS determines that reliable information exists to the contrary or the information is obviously inaccurate. Additional information subsequently provided, discovered, or produced may alter findings or conclusions made in this Phase I ESA report. Unless warranted, information collected has not been independently validated as part of this assessment. SCS is not responsible for consequences or conditions arising from facts that were not fully disclosed to SCS during the assessment.

PHASE I ESA VIABILITY

This Phase I ESA is based on conditions at the time the individual elements of the report were completed. A Phase I ESA that meets or exceeds the requirements of ASTM E1527-21 and 40 CFR 312 is presumed to be viable when it is conducted within 180 days of the date of the intended transaction (acquisition, lease, refinance, etc.). The completion dates for the Phase I ESA components with a 180-day shelf life are identified below.

Component of Phase I ESA with Shelf Life Requirement	Completion Date
Interviews	Not conducted.
Review of Governmental and Historical Records	November 13, 2024
Visual Inspection	November 4, 2024
Declaration of Environmental Professional	November 15, 2024
Environmental Lien Search	Not provided by User

2 GENERAL SITE CHARACTERISTICS

SUBJECT PROPERTY LOCATION

The Property comprises 116 contiguous land parcels situated near the intersection of Indian Avenue and Orange Avenue. It is bounded to the west by Interstate 215 and its Frontage Road, to the north by undeveloped land and West Placentia Avenue, and to the east by North Perris Boulevard and Barnett Avenue. Indian Avenue, Orange Avenue, and some dirt roads cross and border the Property. A list of the assessor's parcel numbers (APNs) and associated areas in acres is provided in **Appendix A.** A tax assessor parcel map showing the Property area is provided as **Figure 2** in **Appendix A.** A Google Earth aerial image showing the Property area is provided as **Figure 3** in **Appendix A.**

GENERAL SUBJECT PROPERTY DESCRIPTION

Including the area of public right-of-way roads within its outer perimeter, the Property comprises approximately 345 acres (however, the public roads are not part of the Property). The majority of the Property is agricultural land. Val Verde Elementary School (2656 Indian Avenue) is located at the northwestern portion of the Property. There are two single-family residences and associated structures to the northwest and southwest of the intersection of Orange Avenue and Indian Avenue (2304 and 2411 Indian Avenue), along with foundations and remnants of additional former residences in this area. Concrete pads associated with former farmhouse/dairy buildings are located at the northeastern corner of the intersection between Indian Avenue and Orange Avenue.

ADJOINING SITE USE

- North – A large vacant lot (2756 and 2726 Indian Avenue) is located to the north of the northwestern portion of the Property. West Placentia Avenue adjoins the northern end of the Property to the north. Silver Creek Industries, Inc. occupies a complex of industrial buildings across the street to the north (2830 Barrett Avenue). This company manufactures modular buildings.

- South – Commercial businesses including Planet Fitness (1690 North Perris Boulevard), Walmart Supercenter (1800 North Perris Boulevard), Aldi (80 Citrus Avenue), and Quick Quack Car Wash (2000 North Perris Boulevard) adjoin the Property to the south.
- East – Barrett Avenue adjoins the northern half of the Property to the east. Scrap metal and equipment are stored across the street from the northern end of the Property. A newly constructed residential subdivision is located to the south of the scrap metal storage yard. Undeveloped land and the Spectrum commercial shopping center (2560 North Perris Boulevard) are also located to the east of the northern half of the Property. North Perris Boulevard adjoins the southern half of the Property to the east. Undeveloped land, a carwash and auto service center (2252 through 2309 North Perris Boulevard), a retirement home (2225 North Perris Boulevard), another carwash (2131 North Perris Boulevard), and a medical clinic (2055 North Perris Boulevard) are located across the street to the east of the southern half of the Property. Undeveloped land and a Walmart Supercenter (1800 North Perris Boulevard) are located to the east of the southern end of the Property.
- West – Interstate 215 and the I-215 Frontage Road adjoin the Property immediately to the west. Undeveloped land is located across the frontage road to the west of the northern end of the Property (still on the eastern side of the freeway). A railroad right-of-way and commercial business buildings are located across the freeway to the west. The businesses include Cramer Farms, Westlake Royal Stone Solutions, The Salvation Army, Daytona Business Park, and self-storage buildings.

PHYSICAL SETTING

Physiographic Setting

According to the U.S. Geological Survey (USGS), Perris, California 7.5-minute topographic maps, the Property is located at an elevation of approximately 1,460 feet above mean sea level in Rancho las Perris. Site topography is generally flat with a slight regional slope to the east-southeast. The Property is situated approximately 3.25 miles northeast of the foothills of the Santa Ana Mountains and approximately 3.5 miles southwest of the Perris Lake reservoir.

Geologic Characteristics

The Property is situated within the Peninsular Ranges geomorphic province of southern California, which is primarily characterized by northwest trending mountain ranges. Surficial sediments in the Property area have been mapped as alluvial/fluvial deposits consisting of sand, silt, and clay (California Groundwater Bulletin 118).

Hydrogeologic Characteristics

The Property is located within the Perris South Groundwater Management Zone (GMZ) of the San Jacinto Groundwater Basin. There are four groundwater wells located on the Property. According to the site contact, the water supply well located at 2364 Indian Avenue is drilled to a depth of 240 feet below ground surface (bgs). Based on a review of information on the State Water Resources Control Board (SWRCB) GeoTracker website for the Nuevo AM/PM Arco service station site located approximately 0.35 miles south of the Property, first groundwater is estimated to occur approximately 75 feet bgs (GeoTracker ID: T0606568183). The anticipated flow direction is to the east-southeast, following the natural surface topography, however, regional groundwater pumping and the Perris Lake reservoir are known to affect groundwater flow direction in the valley.

Groundwater flow direction at the Nuevo AM/PM Arco site has been determined to be towards the south-southwest.

3 SITE RECONNAISSANCE

Maddie Peterson of SCS conducted a reconnaissance of the Property and surrounding area on November 4, 2024. An aerial image showing the Property is provided as **Figure 3** in **Appendix A**. Photographs taken during the site reconnaissance are included in **Appendix B**.

GENERAL SITE INFORMATION

At the time of the site inspection, residences previously located at 2381 and 2334 Indian Avenue had been demolished and removed from the Property. There are two single-family residences and associated structures to the northwest and southwest of the intersection of Orange Avenue and Indian Avenue (2304 and 2411 Indian Avenue), along with foundations and remnants of additional former residences in this area. The Property is mainly vacant, undeveloped agricultural land. Val Verde Elementary school (2656 Indian Avenue) is located in the northwestern corner of the Property. SCS did not access the interior of the residences or the Val Verde Elementary School portion of the Property during the site reconnaissance. These access limitations represent a data gap. However, based on observations from the perimeter of these parcels, past experience with similar sites, and the other information gathered as part of this Phase I ESA, SCS does not consider the access limitations to be a significant data gap.

POTABLE WATER SUPPLY

Val Verde Elementary School is likely supplied potable water from the municipal water system. As noted below, a private drinking water supply well is located on the 2364 Indian Avenue residential parcel.

SEWAGE DISPOSAL SYSTEM

Sanitary wastewater is directed to the septic tanks found at the current residences on the Property. The septic systems associated with former structures are also likely still present onsite.

PROCESS WASTEWATER

Industrial wastewater is not generated at the Property.

HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

No hazardous materials or hazardous wastes were observed on the Property.

STORAGE TANKS

No evidence (fill ports, vent lines, or dispensers) of underground storage tanks (USTs) was observed on the Property. No aboveground storage tanks (ASTs) were observed on the Property.

A discussion of two fuel USTs removed from a historical address located on the Property is presented in Section 6.

ELECTRICAL EQUIPMENT (POLYCHLORINATED BIPHENYLS)

Multiple pole-mounted Southern California Edison (SCE) electrical transformers are located Indian Avenue, adjacent to Val Verde Elementary school (four) and between the 2334 and 2364 Indian Avenue residential parcels. One pole-mounted transformer and a small dry-type transformer was observed on the southwest portion of the Property, west of Indian Avenue. SCE has stated that they have never specified the purchase of distribution transformers utilizing PCBs as the insulating/cooling fluid. SCE transformers utilize mineral oil exclusively. In a statistically valid test of over 20,000 SCE distribution transformers, SCE determined that the concentrations of PCBs in the mineral oils was less than 50 parts per million (ppm) in over 96 percent of the units. Based on the available information, no significant environmental impact to the Property is anticipated from these transformers.

ELEVATORS AND OTHER HYDRAULIC EQUIPMENT

No elevators or other hydraulic equipment were observed at the Property.

PITS, PONDS, OR LAGOONS

No pits, ponds, or lagoons were observed at the Property.

WELLS

There are four groundwater supply wells located on the Property. One active well is located on the southeastern portion of the 2364 Indian Avenue residential parcel. This well is drilled to a depth of 240 feet bgs and provides drinking water to the residence. Three irrigation wells (one active and two inactive) are located on the central-eastern portion of the Property. One is located on the eastern side of a dirt road extending south from Barrett Avenue. The other two irrigation wells are located to the west of North Perris Boulevard, south of Orange Avenue. SCS did not access the interior of the 2411 Indian Avenue portion of the Property. It is possible that an additional groundwater supply well is located on this parcel.

NATURAL DRAINAGE

Natural waterways are not currently located on the Property. Stormwater at the Property infiltrates into the ground or flows overland to the adjoining streets, ultimately joining the municipal storm sewer.

SOLID WASTE DUMPING, LANDFILLING, OR SUSPECTED FILL MATERIAL

SCS observed general surface litter (windblown trash) and some junk materials associated with a homeless encampment on the Property. No indication of solid waste dumping, landfilling or buried material was observed during the site reconnaissance.

VISUAL INSPECTION OF ADJOINING SITES

No obvious evidence of a REC or indications of contamination (e.g. remediation equipment, staining, USTs, etc.), were observed on adjoining sites during the site inspection.

4 INTERVIEWS

SCS interviewed Mr. Chris Franco during the 2023 SCS Phase I ESA site reconnaissance. Interviews were not conducted during the current site reconnaissance, which represents a data gap. However, based on the results of the previous investigation that included interviews, SCS does not consider the lack of interviews in this report a significant data gap.

5 HISTORICAL RESEARCH

Site history was evaluated from the following sources:

- Historical aerial photographs provided by Environmental Data Resources (EDR; October 31, 2023). SCS reviewed these images and included a current Google Earth aerial image of the Property, and no significant changes were noted from the 2023 Google Earth aerial image.
- Historical U.S. Geological Survey (USGS) topographic maps provided by EDR (October 30, 2023).
- A search was made of EDR-Sanborn fire insurance map collection and no maps of the Property were found (October 30, 2023).
- A city directory review report provided by EDR (November 1, 2023).

Copies of aerial photographs, topographic maps, and city directories are included in **Appendix C**.

Year	Description	Source
1901	The Property was largely undeveloped land located in Rancho las Perris. A few rural structures were located on the central portions of the Property, near the intersection of dirt roads that would become Indian and Orange Avenues. Indian Avenue, Orange Avenue, and a former road (crossing the northern end) were present within the exterior boundary of the Property. A few rural structures were also depicted on adjoining sites. Other rural roads were also developed in the immediately surrounding area. A railroad right-of-way adjoined the Property to the west.	Topographic map
1938	The Property was mostly cultivated agricultural land covered with row crops. Dirt roads corresponding to Orange and Indian Avenues, as well as smaller dirt pathways, were located within the exterior boundary of the Property. Two small, rural residential-type structures were located near the center of the Property, to the north of Orange Avenue west of Indian Avenue and on the eastern side of Indian Avenue, south of Orange Avenue. A cluster of farmhouse buildings was located at the northeastern corner of	Aerial photo

	Orange and Indian Avenues. Another farm-related structure was located on the central-eastern portion of the Property. Irrigation ponds were noted on the northern and central portions of the Property. The railroad right-of-way adjoined the Property to the west. The rest of the surrounding area was developed with agricultural land and sporadic rural structures (residences and small farm buildings).	
1942/1943	Most of the Property was depicted as undeveloped land, likely agricultural. Two irrigation ponds and three structures (to the north of Orange Avenue west and east of Indian Avenue) were depicted on the Property. A dirt road was located on the southeastern portion of the Property. Highway 395 and the Atchison, Topeka, and Santa Fe railroad right-of-way adjoined the Property to the west. A few additional structures, dirt roads, and irrigation ponds were developed on adjoining sites.	Aerial photo and Topographic map
1949	No significant changes from the 1938 aerial photos was noted on the Property. A few farm-related equipment storage areas (with small structures) were added offsite to the south-southwest of the Property.	Aerial photo
1953	No significant changes from the 1949 aerial photo were noted on the Property or adjoining sites. A few residential structures were removed from on the Property. The topographic map showed one irrigation pond on the north-central portion of the Property, a few structures near the intersection of Orange and Indian Avenues, and a few structures on the southern portion of the Property. A few additional structures and water tanks were depicted on adjoining sites. Otherwise, no significant changes from the 1943 topographic map were noted in the immediately surrounding area.	Aerial photo
1961	No significant changes from the 1953 aerial photo were noted on the Property or adjoining sites. Mr. Smith indicated that the cluster of buildings at the northeastern corner of the intersection between Orange and Indian Avenues was a small dairy.	Aerial photo
1967	A few more structures on the Property were removed and a few new dirt roads and farm-related structures were added. The residence at 2364 Indian Avenue was developed. A well was depicted on the eastern side of the Property. Two residences were developed at the	Aerial photo and Topographic map

	northwestern corner of Indian and Orange Avenues and immediately to the south of 2364 Indian Avenue (2334 and 2411 Indian Avenue). The Val Verde School was constructed to the north of the Property. Some of the dairy buildings were removed. The rest of the surrounding area remained agricultural land with a few structures, water wells, and a water tank.	
1973	With the exception of the addition of a few small structures, no significant changes from the 1967 topographic map were noted on the Property or adjoining sites.	Topographic map
1974	A few new, small, farm-related buildings were added on or near the southern portion of the Property. Otherwise no significant changes were noted on the Property. A new residence was added, located to the south of 2364 Indian Avenue (2304 Indian Avenue).	Aerial photo
1975	John Coudures was listed at 21011 Indian Avenue on the Property. Dick Evans Diesel & Trucking was located at 21580 Indian Avenue, a historical address located on the eastern side of Indian Avenue, to the south of Orange Avenue. Private individuals were listed at addresses possibly associated with the residential parcels (20890, 21020, 21031, and 21101 Indian Avenue). Val Verde School District and Val Verde School were listed at 20751 Indian Avenue. Harvill Machine Inc. was listed at 24201 Orange Avenue, across the freeway to the west of the Property.	City directory
1979	No significant changes from the 1973 topographic map were noted on the Property or adjoining sites.	Topographic map
1980	John Coudures was listed at 21011 Indian Avenue, a historical address associated with the residence on the Property. Dick Evans Transportation was still located at 21580 Indian Avenue. Harvill Machine Inc. and Lomas Industries were listed across the freeway to the west of the Property (24201 Orange Avenue). Val Verde School District and Val Verde School were listed at 20751 Indian Avenue, north of the Property.	City directory
1985	No significant changes from the 1974 aerial photo were noted on the Property. Navajo Trailer Sales was listed at 21555 Indian Avenue, which may have been associated with the Property. Dick Evans Transportation was still located at 21580 Indian Avenue.	Aerial photo and City directory

	A residential neighborhood was developed across the street to the southeast of the Property.	
1989	No significant changes from the 1985 aerial photo were noted on the Property. An industrial building was developed to the north of the Property (2830 Barrett Avenue). An outdoor storage yard associated with some industrial-type buildings was located to the east of the northern end of the Property. Otherwise, much of the surrounding area remained agricultural with limited residential development.	Aerial photo
1992	John Coudures was listed at 2364 Indian Street (*sic*), the current address associated with the single-family residence on the Property. Dick Evans Transportation was still located at 21580 Indian Avenue. Private individuals were listed at the residential parcel addresses (2304, 2334, and 2411 Indian Street). A private individual was also listed at 2416 Indian Street, which may have been an address associated with the former dairy at the northeastern corner of Orange and Indian Avenues.	City directory
1995	John Coudures was listed at 2364 Indian Street (*sic*). Private individuals were still listed at the residential addresses. Modtech Inc. was listed at 2830 Barrett Avenue, to the north of the Property.	City directory
1997	No significant changes from the 1989 aerial photo were noted on the Property. The freeway was expanded to the west of the Property. Commercial buildings were developed to the northeast of the Property (2560 North Perris Boulevard). A retirement home, carwash, and medical building were developed to the east of the Property (2225, 2131, and 2055 North Perris Boulevard). A movie theater was developed to the south-southeast of the Property (1688 North Perris Boulevard).	Aerial photo
2000	John Coudures was listed at 2364 Indian Street (*sic*). Val Verde Unified School District was listed at 2656 Indian Street. Modtech Hodlings Inc. was listed at 2830 Barrett Avenue.	City directory
2002	The northeastern portion of the Property was being used to store modular buildings. According to Mr. Smith, no manufacturing activities were done on this portion of the Property, only finished product storage.	Aerial photo

	Some of the former dairy structures located at the northeastern portion of Indian and Orange Avenues were demolished, leaving behind only concrete pads. Otherwise no significant changes were noted on the Property or immediately adjoining sites.	
2005	There was no listing for 2364 Indian Avenue. Arizona Millwork Inc., Pacific Continental Modulars, QED Industries, and Modtech Holdings Inc. were listed at 2830 Barrett Avenue.	City directory
2006	The rest of the former dairy structures were demolished, leaving behind only the concrete pads. No significant changes from the 2002 aerial photo were noted on the Property or adjoining sites.	Aerial photo
2009	No significant changes from the 2009 aerial photo were noted on the Property or adjoining sites.	Aerial photo
2010	John Coudures was again listed at 2364 Indian Avenue. Private individuals were still listed at the residential parcels and the school was listed at 2656 Indian Avenue. Ecocore LLC, Pacific Continental Modulars, and Southern Modular Industries were listed at 2830 Barrett Avenue.	City directory
2012	No significant changes from the 2009 aerial photo were noted on the Property or adjoining sites. The 2012 topographic map does not include site-specific details. A few named dirt roads are depicted on the Property, including Arnold Avenue and Barrett Avenue.	Topographic map
2014	John Coudures was listed at the Property address. Silver Creek Construction, Silver Creek Industries, Inc., and Southern Modular Industries were listed at 2830 Barrett Avenue, to the north of the Property.	City directory
2015	The 2015 topographic map does not include site-specific details.	Topographic map
2016	The modular buildings were no longer being stored on the northeastern portion of the Property. A Walmart Supercenter was constructed to the east of the southern end of the Property (1800 North Perris Boulevard).	Aerial photo
2018	The 2018 topographic map does not include site-specific details.	Topographic map
2020	No significant changes from the 2016 aerial photo were noted on the Property or adjoining sites.	Aerial photo

2021	No significant changes from the 2020 aerial photo were noted on the Property. An Aldi grocery store and car wash were constructed on the adjoining site to the southeast.	Google Earth aerial image
2023	No significant changes from the 2021 Google Earth aerial image were noted on the Property or surrounding sites.	Google Earth aerial image
2024	No significant changes from the 2023 Google Earth aerial image were noted on the Property or surrounding sites.	Google Earth aerial image

SUBJECT PROPERTY HISTORICAL USE SUMMARY

As early as 1901, the Property was agricultural land developed with a few rural structures, likely small farmhouses. Since that time, most of the Property has been cultivated farmland. Various small residential-type structures and farm outbuildings have been located on the Property. A small cluster of buildings located at the northeastern corner of Indian Avenue and Orange Avenue between the 1930s and 1990s was reportedly a small family-run dairy. Only the concrete pads from the former dairy buildings remain. In the 1960s and 1970s, parcels near the center of the Property, near the intersection between Orange Avenue and Indian Avenue, were developed with single-family residences (2411, 2364, 2381, 2334, and 2304 Indian Avenue). Between at least 1938 and the mid-1990s, a small cluster of structures also located on the eastern side of Indian Avenue, across the street to the southeast of the residences. City directories indicated that between at least 1975 and 1992, this address (21580 Indian Avenue) was occupied by Dick Evans Transportation. The Val Verde Elementary School was developed to the north in the mid-1960s. At times there were unnamed dirt roads and small irrigation ponds on parts of the Property.

The existence of past agricultural activities on the Property and in adjacent areas indicates a potential for pesticide and/or heavy metal (associated with dusting powders) contamination. In SCS's experience, it is not uncommon to find trace levels of pesticides in soils at former agricultural areas in Southern California. However, these trace concentrations are rarely cause for environmental concern. It is our opinion that, without specific evidence of pesticide storage or mismanagement on the Property, past use for agricultural purposes is considered a *de minimis* condition and collection and analysis of soil samples for pesticides is unwarranted.

HISTORICAL USE OF ADJOINING SITES

As early as 1901 most of the immediately surrounding area was also undeveloped or agricultural land, with sparse residential/farmhouse development. A frontage road, a highway (later expanded to Interstate 215), and a railroad right-of-way have adjoined the Property to the west since the early 1900s. Commercial/industrial buildings were developed across the highway to the west beginning in the 1970s. A modular building construction company has occupied the site to the north (2830 Barrett Avenue) since at least 1989. A commercial shopping center and other commercial buildings were developed to the east of the Property in the 1990s and 2000s. A Walmart Supercenter was constructed to the southeast in 2016. An Aldi grocery store and Quick Quack Car Qash were constructed on the adjoining site to the southeast in 2021.

6 RECORD REVIEW

PREVIOUS ENVIRONMENTAL REPORTS

SCS conducted previous Phase I ESAs at the Property in 2019 and 2023. Those reports did not include the Val Verde Elementary School or some of the privately-owned residential parcels near the center of the Property.

REGULATORY AGENCY RECORDS

Local regulatory agencies and other sources were reviewed in an effort to identify any known or suspected contamination sites or incidents of hazardous waste storage or disposal, which might have resulted in soil and/or groundwater contamination, or volatile organic compound (VOC) vapor migration to the Subject Property. Generally, this includes records for the Property and adjacent parcels, although relevant information for other sites of possible interest in the area (up to one mile) may also be included. Within the City of Perris, the Riverside County Department of Environmental Health generally acts as the lead enforcement agency for UST compliance. If a tank has leaked and groundwater contamination is suspected, the Santa Ana Regional Water Quality Control Board (SARWQCB) generally becomes the lead agency in supervising contaminant characterization and cleanup.

California Environmental Protection Agency

Two addresses associated with the Property appear as listed sites on the California Environmental Protection Agency (CalEPA) Regulated Site Portal website (**Appendix D**). Evans Transport (1936 Indian Street [*sic*]) is listed as a Leaking Underground Storage Tank (LUST) site. This listing is discussed in greater detail below. Val Verde Elementary (2656 Indian Avenue) is listed as a School Investigation site, which is discussed further below.

Santa Ana Regional Water Quality Control Board

Evans Transport (1936 Indian Street) appears in the SWRCB's GeoTracker website. The listing contains copies of RCDEH files that are included in **Appendix D**. According to the information in the file, the RCDEH was notified of an unauthorized release from USTs at the Evans Transport site in October 1992. Environmental Profiles, Inc. (EPI) prepared a site remediation work plan in November 1992, which showed that a 2,000-gallon gasoline UST and 8,000-gallon diesel UST were removed from an area to the north of the Evans Transportation maintenance area in August 1992. At the time the tanks were removed, soil samples were collected 2 and 6 feet below the bottoms of both tanks. Laboratory analytical results showed total petroleum hydrocarbons (TPH; EPA Method 8015M) in four of six soil samples at concentrations ranging from 1.2 to 131 milligrams per kilogram (mg/kg), equivalent to parts per million (ppm). Using EPA Method 418.1, the TPH concentrations ranged from 72 to 21,700 mg/kg in four of six samples. Benzene was not detected in any of the soil samples analyzed using EPA Method 8020. Toluene, ethylbenzene, and/or total xylenes were detected in four of six soil samples at concentrations ranging from 18 to 3,110 micrograms per kilogram (µg/kg), equivalent to parts per billion (ppb).

In March 1993, EPI implemented the work plan, excavating approximately 100 tons of soil at the Property. TPH was detected in five of six confirmation soil samples at concentrations ranging from 15 to 28 mg/kg. Fuel-related VOCs were not detected in any of the confirmation soil samples. Composite soil samples of the excavated stockpile of soil had TPH concentrations of 81 and 426

mg/kg and total xylenes detected at 1,790 mg/kg. The excavated soil was reportedly transported to the Lamb Canyon Sanitary Landfill for disposal. On June 17, 1993, the RCDEH closed the case file related to this LUST investigation/remediation. The analytical results meet current regulatory screening levels for soil. Based on the information reviewed and the case status, the past release of TPH from the USTs at the Evans Transportation facility constitutes a historical recognized environmental condition (HREC).

Department of Toxic Substances Control

Val Verde Elementary School Additional (EnviroStor ID: 33820012) appears in the California Department of Toxic Substances Control (DTSC) EnviroStor website as a school site. According to the listing, it has been a school site since 1959. Advanced Environmental Concepts Inc. (AEC) conducted a Phase I Preliminary Environmental Site Assessment (Phase I PSA) at the Val Verde Elementary School site on behalf of the Val Verde Unified School District. AEC noted that the school had operated two USTs from the early-1970s until they were removed in 1993. One was a 1,000-gallon diesel UST and the second was a 1,000-gallon gasoline UST. There were two dispensers. When removed in 1993, the USTs were reported to be in good shape, but associated piping exhibited rust and pitting. Two confirmation soil samples collected from beneath the gasoline tank were non-detect for gasoline-range total petroleum hydrocarbons (TPH-g), benzene, and ethylbenzene. Toluene was detected at concentrations up to 11 micrograms per kilogram (equivalent to parts per billion [ppb]) and total xylenes were detected concentrations up to 7.3 ppb. At the two confirmation soil samples collected beneath the diesel UST, diesel-range TPH (TPH-d) was detected at concentrations up to 19 mg/kg (equivalent to parts per million [ppm]). No samples were collected along the pipe run, but the removal contractor, Elmer Wood, Inc., noted "soil contamination discovered in pipe trench. Removed during UST removal process." No further details about the pipe trench soil removal or confirmation testing was reported.

The Phase I PSA report also includes copies of a Former Dispenser Excavation Remediation Workplan (AEC, July 2000) and an Excavation Remediation Report (AEC, July 2000). In June 2000, AEC supervised a re-excavation and resampling at the tank pit and dispenser areas. Exploratory trenches were opened at the former UST area to depths of approximately 9 feet bgs. No visual evidence of contaminated soil was reported and a photoionization detector (PID) did not register elevated VOC concentrations. Since the concrete drive slab appeared to have never been cut to remove the piping run, AEC opened the concrete and performed exploratory excavation at the area between the former USTs and former dispenser island. AEC observed visual staining and strong gasoline odors along the pipe run, along with PID readings that exceeded 2,000 ppm. At the former dispenser location, a large leach line (crushed rock and clay pipe) was encountered. This leach line was directly beneath the former dispenser location at a depth of 7 feet bgs. Four soil samples were collected along the exploratory trenching. The stockpiled soil excavated from the trench had detections of TPH-g at 2,900 ppm, benzene at 0.43 ppm, toluene at 5.1 ppm, ethylbenzene at 11 ppm, and total xylenes at 150 ppm. Methyl tert-butyl ether (MTBE) was not detected.

AEC then returned to the site and excavated a total of 566 cubic yards of gasoline-impacted soil to a maximum depth of 31 feet bgs. The final excavation was 30 feet long, 30 feet wide, and 31 feet deep. Confirmation soil samples were collected in the sidewalls and floor of the excavation. Confirmation soil samples were analyzed for TPH-g and fuel VOCs (benzene, toluene, ethylbenzene, and xylenes [BTEX] and MTBE) using EPA Method 8020. In three of 11 confirmation samples, TPH-g was detected at concentrations up to 27 ppm, ethylbenzene at concentrations up to 0.028 ppm, and xylenes at concentrations up to 0.25 ppm. Following completion of the remedial excavation, the area was backfilled with clean "import" crushed rock and sand, and clean overburden soil segregated from the excavation. Based on the results of the excavation work, AEC concluded that an

unauthorized release of gasoline at the former dispenser area had occurred. The vertical and lateral migration of the gasoline release had been facilitated by the hydrostatic action of the effluent wastewater emanating from the two leach lines located beneath and adjacent to the former dispenser. AEC concluded that there was approximately 30 feet of unimpacted soil between the bottom of the excavation and first groundwater. AEC recommended no further action and requested that DTSC close the leaking UST (LUST) case for the site.

On October 13, 2000, DTSC issued a letter addressed to the California Department of Education. Based on the results of the AEC work, DTSC concluded that "no actual or potential hazardous substance release was indicated which would pose a threat to human health or the environment. Therefore, DTSC concurs that no action is necessary with respect to investigation and remediation of site." Copies of the AEC reports and the DTSC closure letter are included in **Appendix D**.

Based on the results of the remedial excavation work and the DTSC closure letter, SCS considers the Val Verde Elementary School LUST case to be an HREC. The low concentrations of TPH-g, ethylbenzene, and xylenes in the final confirmation samples are *de minimis* in nature. This conclusion is supported by the fact that DTSC closed the case knowing that the site was a school, which implies no use limitations since schools are among the most carefully regulated facilities in California. No soil vapor data was collected in 2000, which a regulatory agency may have required if the work were done today. While the lack of soil vapor data constitutes a data gap, in SCS' opinion, it does not represent a significant data gap.

South Coast Air Quality Management District

The Property appears as a listed facility on the South Coast Air Quality Management District (AQMD) online Facility INformation Detail (FIND) website as Dick Evans Transportation, Inc. (21580 Indian Street). This facility is listed as "out of business". In 1990, Dick Evans Transportation was issued a permit for service station storage and for dispensing gasoline. Based on the available information, no environmental impact to the Property is anticipated.

The Property also appears in the AQMD FIND database under the name Val Verde School (2656 Indian Avenue). This facility is listed as "out of business". This facility was issued permits for gasoline storage and dispensing and "control ETO sterilization hospital). Both permits are inactive and no compliance issues were reported. Based on the available information, and the tank removal discussion above, these listings do not represent an environmental concern for the Property.

California Department of Conservation, Geologic Energy Management Division

A map showing the location of the Property relative to nearby oil and gas wells is provided in **Appendix D**. No oil and gas wells are located on the Property or within one mile of the Property.

National Pipeline Mapping System

SCS reviewed the National Pipeline Mapping System (NPMS) website for the Property and surrounding area to identify any hazardous materials pipelines. The NPMS is a geographic information system (GIS) created by the U.S. Department of Transportation, Pipeline and Hazardous Materials Safety Administration (PHMSA), and Office of Pipeline Safety (OPS) in cooperation with other federal and state governmental agencies and the pipeline industry. The NPMS consists of geospatial data, attribute data, public contact information, and metadata pertaining to the interstate

and intrastate hazardous liquid trunklines and hazardous liquid low-stress lines, as well as gas transmission pipelines, liquefied natural gas (LNG) plants, and hazardous liquid breakout tanks (tanks that receive and store liquids transported by pipeline) jurisdictional to PHMSA. The nominal accuracy of geospatial data in the NPMS is +/-500 feet. The NPMS does not contain information on interconnects, pump and compressor stations, valves, direction of flow, capacity, throughput, or operating pressure. In addition, distribution and gathering pipelines are not included in the NPMS.

The NPMS is built from data submitted by pipeline, LNG plant, and breakout tank facility operators. Since 2002, transmission pipeline and LNG plant facility operators are required to submit mapping information to the NPMS and to update their submissions annually. Breakout tank operators are able to submit data to the NPMS on a voluntary basis.

Based on review of the NPMS website, there are no hazardous materials pipelines within 1 mile of the Property (**Appendix D**).

DATABASE SEARCH

A database search for sites listed on various federal, state, tribal, and local databases in the area around the Property was obtained from EDR (November 14, 2024). A description of each of the databases searched is included in the report, which is attached as **Appendix E**. Among the databases included in the EDR report are NPL (federal, tribal, and state-equivalent), proposed and delisted NPL, CORRACTS (RCRA facilities subject to corrective actions), hazardous waste sites identified for investigation or remediation (SEMS [Superfund Enterprise Management System, formerly known as CERCLIS], State CERCLIS, VCP, Brownfields, etc.), LUST, sites with engineering controls, former CERCLIS (NFRAP), RCRA and state hazardous waste generators, ERNS, SWLF, USTs, and Toxic Pits.

Review of these records satisfies all requirements as set forth in 40 CFR Section 312.26 (b) and (c) with regard to the review of federal, tribal, and state government records of databases of such government records and local government records and databases of such records pertaining to both the Property and the nearby or adjoining properties. Further, the search distances for each particular database are as specified in 40 CFR 312.26 and ASTM E1527-21.

Any known or suspected contaminated sites included on these lists within 0.25 miles of the Property are discussed in the following text. As a general rule, sites beyond 0.25 miles are not anticipated to impact a site significantly. Any sites beyond 0.25 miles with a high potential to impact the Property are also discussed. Please note: the distances and directions listed in this report have been field verified and might not always match those in the EDR report.

Sites such as TSD facilities, hazardous waste generators, HAZNET, FINDS, SQGs, LQGs, USTs, HIST UST, RCRA violations, and TRIS facilities with toxic chemical releases (generally in accordance with permitting requirements - into the air, water, or land as reported under SARA Title III) use or store hazardous materials and thus may pose a potential problem in the event of a spill or leak. However, unless these sites also appear in an agency list of contaminated sites, there is no evidence of any problems at this time. Therefore, sites on these lists will not be discussed unless on or in close proximity to the Property.

Please refer to **Appendix E** for further information on these sites.

Property Listings

John Coudures Company, 2364 Indian Avenue – SWEEPS UST and CA FID UST – The Property is listed in the SWEEPS UST and CA FID UST databases. The UST database listings refer to one 550-gallon gasoline UST and two 10,000-gallon diesel USTs that were active in 1992. Information obtained from a previous Phase I ESA for the Property conducted by SCS stated that Mr. Smith, the former resident at 2364 Indian Avenue, indicated that these listings pertained to USTs stored at a ranch on Morgan Street. Morgan Street is three miles from the Property, but were identified with the Property because the mailing address for the ranch was the residence located on the Property. Based on the available information, these listings are not indicative of a REC.

Evans Transport/1X EVANS, AUDREY, 1936 Indian Street – CA RGA LUST, LUST, HWTS, HAZNET, and HIST CORTESE – As discussed above, this case was closed on June 17, 1993. Based on the case status, fall under the category of HREC.

Val Verde Elementary/VVUSD/Val Verde Elem, 2656 Indian Avenue (adjacent to the north) – ENVIROSTOR, SCH, HWTS, HAZNET, CERS, RCRA NonGen/NLR, FINDS, FTTS, and HIST FTTS – This school site has operated since 1959. Two 1,000-gallon fuel USTs (one gasoline and one diesel) were removed from this site in 1993. Following excavation and remediation activities conducted in 2000, RCDEH and DTSC concurred that no further action was necessary at the site. The HAZNET listings are related to asbestos-containing waste, waste oil and mixed oil, empty containers, inorganic solid waste, PCB-containing waste, and other unspecified hazardous wastes removed from the school site between 1993 and 2013. As discussed earlier, the historical USTs at this school site constitute an HREC.

Adjoining Site Listings

The following adjoining sites appear in the EDR database report:

Econo Lube N' Tune #97/MEQ T5 RLA LLC DBA TAKE 5/My Auto Care Center/Meineke Econo Lube #4097, 2309 Perris Boulevard (adjacent to the east) – CERS HAZ WASTE, CA SWEEPS UST, CA CERS TANKS, HWTS, CERS, RCRA NonGen/NLR, RCRA-SQG, FINDS, ECHO, and UST – This facility is listed as a current UST site with one 500-gallon waste oil UST. There are no indications of known past releases from the UST. The facility also generates small quantities of ignitable hazardous waste. Based on the available information, it is unlikely that this site has negatively affected the environmental condition of the Property.

Golden Star Dry Cleaners, 2131 North Perris Boulevard (adjacent to the east) – EDR Hist Cleaner – This facility was listed as dry cleaners between 2006 and 2013. It is situated downgradient of the Property and there are no reported releases from the facility. Based on the available information, SCS considers it unlikely that this site has negatively affected the environmental condition of the Property.

Modtech, Inc./Silver Creek Ind. Inc., 2830 Barrett Avenue (adjacent to the north) – CERS HA WASTE, HAZNET, RCRA- LQG, RCRA-SQG, EMI, NPDES, WDS, and CIWQS – These facilities have manifested various hazardous wastes including: ignitable wastes, aqueous solutions with organic residues, waste oil and mixed oil, oil/water separation sludge, acidic waste, and mercury. Silver Creek has also reported generating air emissions and has an active stormwater permit. None of these listings are indicative of a chemical release and, based on the available information, this site is not considered an environmental risk to the Property.

Harvill Machine Inc./The Salvation Army, 24201 Orange Avenue (adjacent to the west) – HIST UST, RCRA-LQG, RCRA NonGen/NLR, CERS HAZ WASTE, FINDS, ECHO, EMI, HWTS, and HAZNET -- Harvill is listed as the historical location of two USTs installed in 1966. No information about their status is reported, but there was no report of a release from these tanks. Based on the absence of a reported release and distance, SCS considers it unlikely that this site poses an environmental risk to the Property. The Salvation Army has reported generating ignitable and mercury wastes and is also not considered an environmental risk to the Property.

Speedy Lube LLC/Dollar Tree #02980/Spectrum Cleaners/Harbor Freight Tools/Walmart Store #1747/Spectrum Cleaners/Dryclean Express/Cardenas Markets #4/Jason Radwan, 2560 North Perris Boulevard (adjacent to the east) – RCRA NonGen/NLR, FINDS, ECHO, HWTS, HAZNET, RCRA-VSQG, CERS HAZ WASTE, NPDES, CERS, AST, SWEEPS UST, CA FID UST, and DRYCLEANERS – The Walmart listing is associated with a 2,400-gallon AST of unspecified contents. It contains no indications of a past release. The Spectrum Cleaners and Cardenas Markets listings are associated with a drycleaner facility with active permits to use perchloroethylene (PCE) as part of its dry cleaning process. These facilities are listed downgradient, approximately 250 feet across Barrett Avenue to the east of the northern portion of the Property. There are no reported releases of dry cleaning solvent from these facilities. Based on the available information, SCS considers it unlikely that this site has negatively affected the environmental condition of the Property. Its distance and location relatively downgradient imply the risk of vapor intrusion at the Property, in the event of a solvent release, is low.

Walmart Supercenter #1747, 1800 North Perris Boulevard (adjacent to the south) – RCRA-SQG – This facility has generated numerous hazardous wastes, including chlorinated solvents like PCE. However, this listing contains no information about documented chemical releases and this business is not anticipated to affect the environmental condition of the Property.

AL California LLC DBA ALDI Inc., 80 Citrus Avenue (adjacent to the south) – CA CERS HAZ WASTE, CA HWTS, CA CERS – This facility is a grocery store that generates retail hazardous waste such as off-spec, aged, or surplus organics. The facility received numerous administrative violations in 2021 and 2022 such as failure to maintain Safety Data Sheets for each hazardous material stored on site and failure to provide initial and annual training to all employees in safety procedures in the event of a release, all of which have returned to compliance. No other information of releases were noted. Based on the available information, this site is not anticipated to affect the environmental condition of the Property.

Other Database Sites

The EDR report provides a summary table of regulatory database sites within specified distances of the Property, including standard environmental records, additional environmental records, high risk historical records, and recovered governmental records. This summary table is provided beginning on Page 4 of the EDR report (**Appendix E**).

Other sites located within 0.25 miles of the Property with known releases of hazardous substances such as LUST and ENVIROSTOR sites are located cross- or downgradient, or based on case status and/or distance, are not anticipated to negatively affect the environmental condition of the Property. Several sites located within 0.25 miles appear in databases not typically associated with documented releases, such as RCRA-SQG, RCRA-LQG, CERS HAZ WASTE, E MANIFEST, CA EMI, CA CERS, CA AST, CA CERS TANKS, RCRA NonGen/NLR, CA AST, CA HIST UST, CA SWEEPS UST, CA FID UST, FINDS, ECHO, CA HWTS, CA HAZNET,CA Cortese, CA DRYCLEANERS, CA NPDES, RCRA-VSQG, and UST FINDER. Based on a review of the database information, none of these sites are known to

have any contamination at this time; therefore, none are anticipated to have negatively affected the environmental condition of the Property. Similarly, none of the sites situated beyond 0.25 miles are anticipated to have impacted the Property.

Unmappable or Orphan Sites

Two unmappable sites were identified in the EDR report. Unmappable sites cannot be plotted due to inaccurate or incomplete addresses. Based on review of the provided data, including the estimated locations of the unmappable sites in relation to the Property, it appears unlikely that the unmappable sites have adversely affected the environmental condition of the Property.

7 USER PROVIDED INFORMATION

The following information is the responsibility of the User (40 CFR 312.22) and is not included in this Phase I ESA:

- Identification of environmental cleanup liens against the Subject Property.
- Specialized knowledge or experience of the User.
- The relationship of the purchase price to the fair market value of the Subject Property.

A User Questionnaire was not returned to SCS for inclusion in the report. The User provided no information beyond what is discussed above.

TITLE RECORDS

No title report was provided to SCS for review.

ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

No information regarding environmental liens or activity and use limitations was provided to SCS. No environmental liens or activity/use limitations were identified by SCS during the course of this assessment.

SPECIALIZED KNOWLEDGE OR EXPERIENCE

No specialized knowledge regarding the Property was provided to SCS by the User.

VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

No property valuation information was provided to SCS.

8 DATA GAPS AND DEVIATIONS

Certain other limitations could affect the accuracy and completeness of this report, as follows:

- Site Access Limitations – SCS did not access the interior of the residences or the Val Verde Elementary School portions of the Property during the site reconnaissance. These access limitations represent a data gap. However, based on observations from the perimeter of these parcels, past experience with similar sites, and the other information gathered as part of this Phase I ESA, SCS does not consider the access limitations to be a significant data gap.

- Physical Obstructions to Observations – None.
- Outstanding Information Requests – None.
- Historical Data Sources Failure – None.
- Other Limitations – None.

As noted earlier, a User Questionnaire was not returned to SCS for inclusion in the report. Based on the other information gathered during the course of this Phase I ESA, this is not considered a significant data gap.

9 FINDINGS AND OPINIONS

Based on the scope of work performed, SCS finds the following:

The Property comprises 116 contiguous land parcels situated near the intersection of Indian Avenue and Orange Avenue. It is bounded to the west by Interstate 215 and its Frontage Road, to the north by undeveloped land and West Placentia Avenue, and to the east by North Perris Boulevard and Barnett Avenue. Indian Avenue, Orange Avenue, and some dirt roads cross and border the Property. Including the area of public right-of-way roads within its outer perimeter, the Property comprises approximately 345 acres (however, the public roads are not part of the Property). The majority of the Property is agricultural land. Val Verde Elementary School (2656 Indian Avenue) is located at the northwestern portion of the Property. There are two single-family residences and associated structures to the northwest and southwest of the intersection of Orange Avenue and Indian Avenue (2304 and 2411 Indian Avenue), along with foundations and remnants of additional former residences in this area. Concrete pads associated with former farmhouse/dairy buildings are located at the northeastern corner of the intersection between Indian Avenue and Orange Avenue.

As early as 1901, the Property was agricultural land developed with a few rural structures, likely small farmhouses. Since that time, most of the Property has been cultivated farmland. Various small residential-type structures and farm outbuildings have been located on the Property. A small cluster of buildings located at the northeastern corner of Indian Avenue and Orange Avenue between the 1930s and 1990s was reportedly a small family-run dairy. Only the concrete pads from the former dairy buildings remain. In the 1960s and 1970s, parcels near the center of the Property, near the intersection between Orange Avenue and Indian Avenue, were developed with single-family residences (2411, 2364, 2381, 2334, and 2304 Indian Avenue). Between at least 1938 and the mid-1990s, a small cluster of structures also located on the eastern side of Indian Avenue, across the street to the southeast of the residences. City directories indicated that between at least 1975 and 1992, this address (21580 Indian Avenue) was occupied by Dick Evans Transportation. The Val Verde Elementary School was developed to the north in the mid-1960s. At times there were unnamed dirt roads and small irrigation ponds on parts of the Property.

The existence of past agricultural activities on the Property and in adjacent areas indicates a potential for pesticide and/or heavy metal (associated with dusting powders) contamination. In SCS's experience, it is not uncommon to find trace levels of pesticides in soils at former agricultural areas in Southern California. However, these trace concentrations are rarely cause for environmental concern. It is our opinion that, without specific evidence of pesticide storage or mismanagement on the Property, past use for agricultural purposes is a *de minimis* condition and collection and analysis of soil samples for pesticides is unwarranted.

Most of the Property is currently fallow agricultural land, with the exception of Val Verde Elementary School on the northwestern corner of the Property, and two single-family residences and associated structures to the northwest and southwest of the intersection of Orange Avenue and Indian Avenue (2304 and 2411 Indian Avenue), along with foundations and remnants of additional former residences in the area. A vacant fenced area at the northeastern portion of the Property was historically used by a nearby business to store finished modular structures (offices, portable classrooms, etc.). No hazardous materials or hazardous wastes were observed at during the site inspection. No indications of landfilled materials were noted on the Property. No storage tanks are currently located on the Property. SCS did not access the interior of the residences or the Val Verde Elementary School portion of the Property during the site reconnaissance. These access limitations represent a data gap. However, based on observations from the perimeter of these parcels, past

experience with similar sites, and the other information gathered as part of this Phase I ESA, SCS does not consider the access limitations to be a significant data gap.

Evans Transportation, a small business historically located at 1936 Indian Street, near the center of the Property was identified in regulatory databases and regulatory agency files as the location of two former fuel underground storage tanks (USTs), one that stored gasoline and the other diesel. The USTs were removed in 1992 and initial testing indicated the presence of total petroleum hydrocarbons (TPH) and fuel-related volatile organic compounds (VOCs) in soil samples collected from beneath the tanks. Approximately 100 tons of soil were subsequently excavated and removed from the former tank pit area to a landfill. Confirmation soil sampling showed remaining TPH concentrations from 15 to 28 milligrams per kilogram (mg/kg) and no detectable concentrations of fuel-related VOCs. The remaining TPH concentrations are far below current regulatory screening levels. On June 17, 1993, the Riverside County Department of Environmental Health closed the case file related to the leaking UST. Based on the information reviewed and the case status, the past release of TPH from the USTs at the Evans Transportation facility constitutes a historical recognized environmental condition (HREC).

Val Verde Elementary School Additional appears in the DTSC EnviroStor website as a school site. According to the listing, it has been a school site since 1959. Two 1,000-gallon fuel USTs were removed from this school site in 1993 (one gasoline and one diesel). Confirmation soil samples at that time did not show evidence of releases from the tanks, but did indicate that there had been releases from the piping leading to the dispensers. In 2000, additional investigation and remedial excavation activities were conducted at the piping and dispenser areas. A total of 566 cubic yards of gasoline-impacted soil was excavated to a total depth of 31 feet bgs. Confirmation samples showed remaining TPH-g concentrations up to 27 mg/kg, ethylbenzene up to 0.028 mg/kg, and xylenes up to 0.25 mg/kg. On October 13, 2000, DTSC issued a letter addressed to the California Department of Education. Based on the results of the remedial excavation work, DTSC concluded that no actual or potential hazardous substance release was indicated which would pose a threat to human health or the environment. Therefore, DTSC concurred that no action was necessary with respect to investigation and remediation of site.

Based on the results of the remedial excavation work and the DTSC closure letter, SCS considers the Val Verde Elementary School LUST case to be an HREC. The low concentrations of TPH-g, ethylbenzene, and xylenes in the final confirmation samples are *de minimis* in nature. This conclusion is supported by the fact that DTSC closed the case knowing that the site was a school, which implies no use limitations since schools are among the most carefully regulated facilities in California. No soil vapor data was collected in 2000, which a regulatory agency may have required if the work were done today. While the lack of soil vapor data constitutes a data gap, in SCS' opinion, it does not represent a significant data gap.

Regulatory database information identified few known and suspected contamination sites in the area surrounding the Property. Based on a review of the available information, it is unlikely that any of these sites has negatively affected the environmental condition of the Property.

10 CONCLUSIONS

In summary, SCS performed a Phase I ESA of the Harvest landing project area located near the intersection of Indian Avenue and Orange Avenue in Perris, California, in conformance with the scope and limitations of 40 CFR 312 and ASTM E1527-21. Any exceptions or deviations are described in Section 8 of this report.

In the opinion of the Environmental Professional, this assessment has not revealed no recognized environmental conditions. As discussed above, SCS identified a HRECs and access limitations that are not considered a significant data gap. Additional investigation of the Property is not warranted or recommended at this time.

11 DECLARATION OF ENVIRONMENTAL PROFESSIONAL

This Phase I ESA report for the Harvest Landing Project area located at near the intersection of Indian Avenue and Orange Avenue, in Perris, California dated November 15, 2024, was prepared by Maddie Peterson and reviewed by Justin Rauzon.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. The resume for the individual below is included in **Appendix G**.

13 GLOSSARY

AAI – All Appropriate Inquiry

AUL – Activity and Use Limitations

BER – Business environmental risk. As defined in ASTM E1527-21, a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in the ASTM E1527-21 practice.

BTEX – Benzene, toluene, ethylbenzene, and total xylenes

CERCLA – Comprehensive, Environmental Response, Compensation, and Liability Act

CERCLIS – Comprehensive Environmental Response, Compensation, and Liability Information System

CFR – Code of Federal Regulations

CORRACTS – Corrective Action Against Responsible Parties at a RCRA site

CREC – Controlled Recognized Environmental Condition. As defined in ASTM E1527-21, a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority, or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity use limitations, or other property use limitations).

De Minimis Condition – A condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a *de minimis condition* is not a recognized environmental condition nor a controlled recognized environmental condition.

DTSC – California EPA Department of Toxic Substances Control

EDR – Environmental Data Resources, Inc.

ERNS – Emergency Response Notification System

ESA – Environmental Site Assessment

FINDS – Facility Index System

HAZNET – California EPA Hazardous Waste Facility and Manifest Data

HREC – Historical Recognized Environmental Condition. As defined in ASTM E1527-21, a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or

authorities without subjecting the subject property to any controls (for example, activity use limitations or other property use limitations).

LQG – Large Quantity Hazardous Waste Generator

LUST – Leaking Underground Storage Tank

MCL – Maximum contaminant level

MTBE – Methyl-tert-butyl-ether

NFA – No Further Action determination

NFRAP – No Further Remedial Action Planned

NPL – National Priority List (Superfund)

PAHs – Polynuclear aromatic hydrocarbons

PCBs – Polychlorinated biphenyls

RCRA – Resource Conservation and Recovery Act

RCRIS – Resource Conservation and Recovery Information System

REC – Recognized environmental condition. As defined by ASTM E1527-21, a REC means (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. A *de minimis condition* is not a recognized environmental condition.

ROD – Record of Decision

RBSLs – Risk-based Screening Levels

RSLs – Regional Screening Levels

RWQCB -- Regional Water Quality Control Board

SARA – Superfund Amendments and Reauthorization Act

SLIC -- Spills, Leaks, Investigations, and Cleanups database

SQG – Small Quantity Hazardous Waste Generator

SWIS – Solid Waste Information System

SWLF – Solid Waste Facility/Landfills

TPH – Total Petroleum Hydrocarbons

TRIS – Toxic Release Inventory System

TSD – Treatment, Storage, and/or Disposal Facility

User – As defined in ASTM E1527-21, the party seeking to use Practice E1527 to complete an environmental site assessment of the subject property.

U.S. EPA – United States Environmental Protection Agency

USGS – United States Geologic Survey

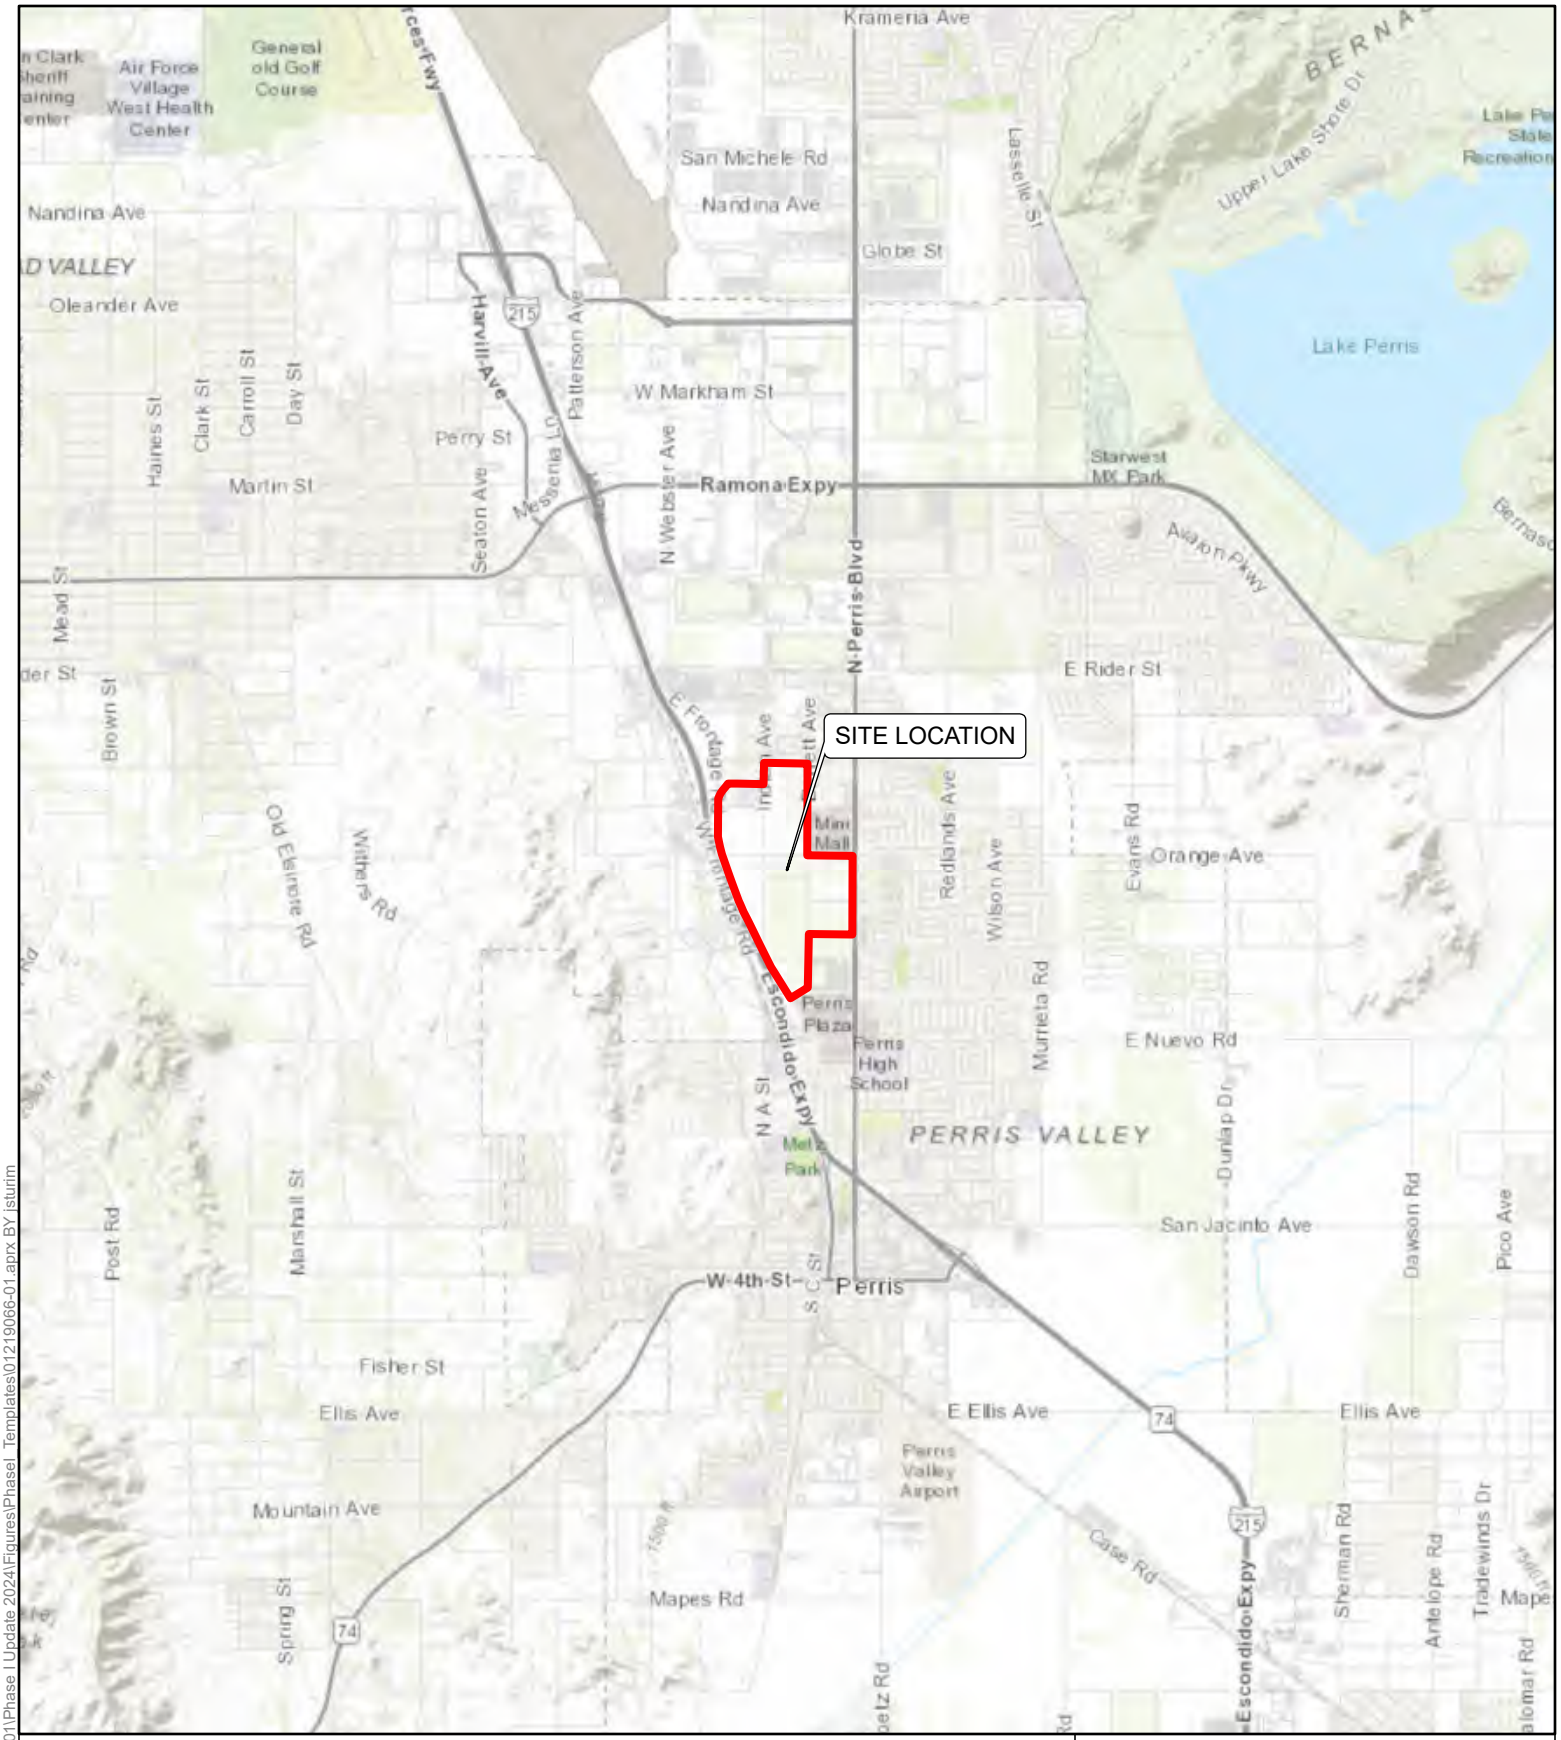

UST – Underground Storage Tank

VCP – Voluntary Cleanup Program

VOCs – Volatile organic compounds

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by SCS Engineers were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by SCS Engineers were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 76FB-4207-9FB6

PO # NA

Project 01219066.01

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 76FB-4207-9FB6

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

SCS Engineers (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT

PERMIT to CONSTRUCT/OPERATE

9150 FLAIR DRIVE, EL MONTE, CALIFORNIA 91731

PERMIT NO. M93576
A/N 173220
PAGE 1

THIS INITIAL PERMIT MUST BE RENEWED BY 8/16 ANNUALLY UNLESS THE EQUIPMENT IS MOVED, OR CHANGES OWNERSHIP. IF THE BILLING FOR ANNUAL RENEWAL FEE (RULE 301.F) IS NOT RECEIVED BY THE EXPIRATION DATE, CONTACT THE DISTRICT.

LEGAL OWNER OR OPERATOR: DICK EVANS TRANSPORTATION, INC

CO. ID.: 030359 SECTOR: SB

EQUIPMENT LOCATED AT: 21580 INDIAN ST
PERRIS, CA

EQUIPMENT DESCRIPTION:
FUEL STORAGE AND DISPENSING FACILITY CONSISTING OF:

1. ONE — UNDERGROUND DIESEL STORAGE TANK(S), (EACH) 5,000 GALLON CAPACITY, N/A

2. ONE — DIESEL DISPENSING NOZZLES.

PERMIT CONDITIONS:

1. OPERATION OF THIS EQUIPMENT MUST BE CONDUCTED IN COMPLIANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT IS ISSUED UNLESS OTHERWISE NOTED BELOW.

2. THIS EQUIPMENT MUST BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES.

3. (EXCEPT FOR DIESEL TRANSFERS) PHASE I AND PHASE II VAPOR RECOVERY SYSTEMS MUST BE IN FULL OPERATION WHENEVER THIS FACILITY IS IN USE. SUCH SYSTEMS MUST BE INSTALLED, OPERATED AND MAINTAINED TO MEET ALL CARB CERTIFICATION REQUIREMENTS.

THIS PERMIT CONCLUDES ON THE NEXT PAGE.

CONTINUATION OF PERMIT TO CONSTRUCT/OPERATE

NOTICE

IN ACCORDANCE WITH RULE 206, THIS PERMIT TO CONSTRUCT/OPERATE OR COPY MUST BE POSTED ON OR WITHIN 8 METERS OF THE EQUIPMENT.

THIS PERMIT DOES NOT AUTHORIZE THE EMISSION OF AIR CONTAMINANTS IN EXCESS OF THOSE ALLOWED BY DIVISION 26 OF THE HEALTH AND SAFETY CODE OF THE STATE OF CALIFORNIA OR THE RULES OF THE AIR QUALITY MANAGEMENT DISTRICT. THIS PERMIT CANNOT BE CONSIDERED AS PERMISSION TO VIOLATE EXISTING LAWS, ORDINANCES, REGULATIONS OR STATUTES OF OTHER GOVERNMENT AGENCIES.

APPROVAL OF THE DEPARTMENT OF PUBLIC WORKS, THE DEPARTMENT OF BUILDING AND SAFETY, THE LOCAL FIRE DEPARTMENT AND/OR THE LOCAL TANK LAW IMPLEMENTING AGENCY IS REQUIRED BEFORE CONSTRUCTION IS STARTED.

THIS PERMIT TO CONSTRUCT/OPERATE IS BASED ON THE PLANS, SPECIFICATIONS, AND DATA SUBMITTED AS IT PERTAINS TO THE RELEASE OF AIR CONTAMINANTS AND CONTROL MEASURES TO REDUCE AIR CONTAMINANTS. NO APPROVAL OR OPINION CONCERNING SAFETY AND OTHER FACTORS IN DESIGN, CONSTRUCTION OR OPERATION OF THE EQUIPMENT IS EXPRESSED OR IMPLIED.

RE: Request to Dispose of 100 tons of contaminated soil from Evans Transportation, Perris, CA to the Lamb Canyon Landfill

I have received the proper documentation from the California Regional Water Quality Control Board – Santa Ana Region (CRWQCB) and Riverside County Hazardous Materials Management (HMM) for the disposal of 100 tons of contaminated soil from Evans Transportation, 1936 Indian Ave., Perris, CA to the Lamb Canyon Sanitary Landfill.

Based on CRWQCB and HMM input and the additional information you have provided, the LEA clears the one time disposal of the 100 tons of contaminated soil at the Lamb Canyon Sanitary Landfill.

The Riverside County Department of Waste Management has the ultimate authority to accept or deny entry of any waste to the Lamb Canyon Sanitary Landfill. Please contact Rog Tengco at (909) 275-1370 before attempting to deliver any materials to the landfill.

If you have any questions regarding this letter, please call Michael Kuninobu at (909) 275-8980.

Sincerely,

Michael Kuninobu, M.P.H., R.E.H.S.

RE: Former site of Evans Transportation at 1936 Indian Ave. Perris

Dear Mr. Evans,

The County of Riverside, Department of Environmental Health, Hazardous Materials Management Division has reviewed the analytical results from Environmental Profiles, Inc. dated March 30, 1993. There is currently approximately 100 tons of petroleum contaminated soil at the above referenced sight. The analytical results submitted to this office indicate the petroleum contaminated soil to be non-hazardous per Title 22 of the California Code of Regulations.

Based on the assumption that the information provided to this agency was both accurate and representative of existing conditions, it is the position of this office not to oppose the disposal of waste soil to the landfill.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present, or future operations at the site, which threaten to cause pollution or nuisance to water quality or public health.

If you have any questions regarding this matter, contact this office at (909)654-3878.

Sincerely,

Marc K. Brown

RE: Underground Storage Tank Cleanup.

Dear Responsible Party:

The Hazardous Materials Management Division has recently developed guidelines to aid responsible parties in meeting County requirements for underground storage tank cleanups. Enclosed, please find a copy of the Local Oversight Program Corrective Action Guidelines for your use. If you have any questions, please do not hesitate to contact me at (909) 654-3878.

Sincerely,

Marc K Brown

Re: Remedial Sampling; Evans Transportation, 1936 Indian Avenue, Perris

This transmittal present the results of the site sampling program conducted on March 11, 1993 at the subject site. Please note that the laboratory reported the samples as US not VS as agreed upon at the site.

Spoils piles CS1 and CS2 were composited 4:1 and pile CS3 was composited 2:1. Results in all analysis are consistent with successful removal of the most highly contaminated soils at the site.

The levels of soil contamination are quite low in the spoils piles and it is our plan to landfill the soil as top cover. We would appreciate any assistance you can provide in gaining clearance to a local landfill for the approximately 100 tons of soil at the site.

We would like to obtain verbal permission to backfill the site. Should you have any further questions or requirements regarding this transmittal please call at 310-493-2190 between the hours of 8:00 a.m and 5:00 p.m.

Verbal Backfill Auth. @ 4/12/93

RE: Former site of Evans Transportation at 1936 Indian Ave. Perris

Dear Mr. Evans,

The County of Riverside, Department of Environmental Health has recently received the laboratory results for soil samples taken from the above referenced site on March 11, 1993. The results were submitted by Mathew Walker of Environmental Profiles, Inc. on April 6, 1993.

The results of the samples taken at the floor and sidewalls of the tank excavation showed contamination levels that warrant no additional remedial action. In a March 30, 1993 letter that accompanied these results, Mr. Walker proposed that the stockpiled soil (approx. 100 tons) with these low levels of contamination be allowed to go to a local landfill to be incorporated as top cover. I advised Mr. Walker to contact the Land Use section of this Department to receive approval for this proposal.

In addition to the stockpiled soil with low level contamination, there were two stockpiles showing elevated levels of petroleum contaminants. This soil must be handled differenly than previously mentioned. The County is currently awaiting a proposed method of treatment/disposal for these stockpiles labeled CS1 and CS2. Please submit this proposal to the County **on or before May 21, 1993.**

If you have any questions regarding the County's role in the clean up of this site, Please feel free to contact me at (909)654-3878.

Sincerely,

Marc K. Brown
Hazardous Materials Specialist

RE: Remediation proposal for 1936 Indian Ave., Perris, CA

Dear Mr. Evans,

The County of Riverside Hazardous Materials Branch has received and reviewed the site remediation workplan submitted by Brennan Mahoney and Matthew Walker of Environmental Profiles,Inc. The workplan will be accepted providing the following information is added to the plan:

* Include the contract statement from TPS describing the final destination of this soil to be treated at their facility.

* Clarify the methods that will be used to segregate the contaminated soil from that which is considered clean.

* In place of the proposed use of "Blue Ice" for chilling confirmation field samples, regular ice shall be used in the cooler.

After speaking with Matthew Walker on the telephone,the above requested information was send via facsimile to this office. Therefore, the plan has been accepted for the scope of work it has explained.

Please notify this office at least five (5) days prior to performing any work at this site. If you have any questions regarding the County's involvement with this site, please feel free to contact this office at (909)654-3878.

Sincerely,

Marc K. Brown

DICK G EVANS (OWNER)
DICK G EVANS TRANSPORT
1936 INDIAN AVE
PERRIS CA 92571

Dear Owner:

RE: Evans Transportation 1936 Indian Ave, Perris CA

It has come to the attention of the Riverside County Department of Environmental Health, Hazardous Materials Branch that an unauthorized release has occurred from the underground storage tank system under your control. The resulting soil and/or groundwater contamination must be handled accordingly.

It is your responsibility under the California Code of Regulations Title 23 Waters, Division 3, Chapter 16, Article 11 to take corrective action for the unauthorized release at the above referenced site. At this time, a subsurface investigation must be conducted to delineate the lateral and vertical extent of soil contamination and determine the impact on groundwater, if applicable. Based on the results of this investigation, it is your responsibility to remediate the adverse effects of the unauthorized release.

Please be certain that you and your contractor(s) have all appropriate licenses and permits necessary to perform this work, such as a C-57 for well drilling, County of Riverside well permits, South Coast Air Quality Management District permits, etc. Copies of these documents should be available for inspection by County personnel on request. Results of all investigations must be submitted to this office in the form of technical reports prepared by a qualified professional who is registered as an engineer or geologist in the State of California.

Prior to conducting any work at the site, a detailed workplan must be submitted and accepted by this office. The workplan must be received on or before November 5, 1992.

It is also your responsibility under California Code of Regulations Title 23 Water Section 2652(d) to provide at a minimum, a quarterly status report to this office every three (3) months until site investigation and cleanup are complete. The status report should detail any investigative, remedial, or other action taken regarding the site. The status report should include, at a minimum, information listed on the sample quarterly status report form enclosed with this letter. We suggest that you make copies of the report form for use each quarter. The quarterly status report shall be submitted within 15 days of the end of each quarter.

Quarter 1 - January thru March.... Submit by April 15
Quarter 2 - April thru June..... Submit by July 15
Quarter 3 - July thru September... Submit by October 15
Quarter 4 - October thru December. Submit by January 15

Failure to provide quarterly status reports in a timely manner may cause the responsible party to be placed in a recalcitrant status due to non-compliance. Recalcitrant responsible parties are not eligible for California Leaking Underground Fuel Tank Clean-Up Funds and may be subject to enforcement action.

Should you have any questions concerning this matter, please contact me at (714) 654-3878.

Sincerely,

Marc Brown
Hazardous Materials Specialist

1936 INDIAN AVE
PERRIS CA 92571

Dear Owner:

RE: Evans Transportaion 1936 Indian Ave, Perris CA

The purpose of this letter is to inform you that County of Riverside, Department of Health, Environmental Health Services Division, Hazardous Materials Branch has entered into an agreement with the State of California Water Resources Control Board to oversee the cleanup and mitigation of contaminated sites resulting from the unauthorized release of hazardous substances from underground storage tanks. The cleanup of these sites is necessary to protect the groundwaters of the state from contamination and to protect the public from exposure from hazardous chemicals.

The oversight program developed by the State and administered by the County is funded by State and Federal monies and is subject to reimbursement by the responsible parties for each specific site. The County will account for time and materials expended at each cleanup site. On a routine basis, the State will be provided with the amounts detailing the time and expenses. The State will then invoice the responsible party for all direct and indirect cost associated with the cleanup of the site.

Enclosed you will find the Notice of Reimbursement. This is the formal notification concerning the reimbursement requirements for the responsible party. If any of the information is incorrect or if you should have any questions, contact this office as soon as possible at (714) 654-3878.

Sincerely,

Marc Brown
Hazardous Materials Specialist

The Federal Petroleum Leaking Underground Storage Tank Trust Fund (Federal Trust Fund) provides funding to pay the local and state agency administrative and oversight costs associated with the cleanup of releases from underground storage tanks. The Legislature has authorized funds to pay the local and state agency administrative and oversight costs associated with the cleanup of releases from underground storage tanks. The direct and indirect costs of overseeing removal or remedial action at the above site are funded, in whole or in part, from the Federal Trust Fund. The above individual(s) or entity(ies) have been identified as the party or parties responsible for investigation and cleanup of the above site. YOU ARE HEARBY NOTIFIED that pursuant to Title 42 of the United States Code, Section 6991b(h)(6) and Sections 25297.1 and 25360 of the California Health and Safety Code, the above Responsible Party or Parties must reimburse the State Water Resources Control Board not more than 150 percent of the total amount of site specific oversight costs actually incurred while overseeing the cleanup of the above underground storage tank site, and the above Responsible Party or Parties must make full payment of such costs within 30 days of receipt of a detailed invoice from the State Water Resources Control Board.

1.0 INTRODUCTION

This assessment workplan is being proposed in response to the October 5, 1992 County of Riverside Department of Environmental Health (CRDEH) directive for a site assessment and presents the proposed site remediation activities to be conducted by Environmental Profiles Incorporated (EPI) at Evans Transportation (ET).

2.0 BACKGROUND

ET is located at 1936 Indian Avenue, Perris, California (Figure 1). ET had one 8,000 gallon diesel tank and one 2,000 gallon gasoline tank located at the northern portion of the site (Figure 2). On August 10, 1992 both underground storage tanks were removed by D.L. Wiest General Construction. At the time of tank removal soil samples were taken at 2 feet and 6 feet below the bottoms of both tanks.

Results from laboratory chemical analysis of those samples indicated that attenuation of soil contamination appears to occur at approximately 7 feet below the previous location of the bottom of the tanks. Laboratory chemical analysis results and chain of custody records are presented in Appendix B.

3.0 SCOPE

3.1 General

The October 5, 1992 CRDEH directive requested that a subsurface investigation be conducted to delineate the lateral and vertical extent of soil contamination and determine the impact on ground water, if applicable. Results from soil samples taken at the time of tank removal indicate that the extent of vertical and lateral soil contamination may be minimal and can be identified during over-excavation activities.

Depth to groundwater is estimated to be 40 feet below grade surface (bgs) and will be verified at time of overexcavation by information from local off site wells.

EPI will provide environmental professional support for the following scope of work:

- Health and Safety Plan
- Excavation
- Soil Treatment
- Verification Sampling
- Report of Findings

3.2 Health and Safety Plan

This section presents the health and safety procedures that are intended to guide field activities at the ET property. The provisions of this plan apply to EPI employees and

subcontractors. Employees of federal, state and local agencies are expected to observe the safety rules and regulations established by their respective organizations in addition to the requirements of this document. A complete health and safety plan is presented in Appendix C.

3.3 Excavation

Site excavation activities will be directed by an EPI engineer or soil scientist. EPI anticipates that an estimated 50 cubic yards (approximately 75 tons) of contaminated native soil will have to be excavated from the former underground storage tank area to sufficiently remove the diesel and gasoline contaminated soil. The approximate area of soil to be excavated is shown on the site diagram (Figure 2) and the total depth of the excavation is expected to be less than ten feet (bgs).

CLARIFY HOW?

Contaminated soil will be removed by a backhoe and segregated based to contaminant concentration. Excavation activities will include the following:

- emissions monitoring in accordance with Air Quality Management Rule 1166.
- site verification sampling
- regulatory interface
- stockpiling and covering of soil at pre-determined locations

3.4 Soil Treatment

Contaminated soil will be transported upon removal by truck to Thermal Process Systems (TPS) as a non hazardous material for recycling as roadbase. TPS is a fully permitted resource recovery facility able to treat and recycle hydrocarbon contaminated soils. Based on all previous laboratory data the estimated amount of soil to be removed is considered acceptable for treatment under the provisions of the TPS permit for re-cycling activities.

3.5 Verification Sampling

During the assessment excavation approximately six (6) confirmation end point soil samples will be collected from selected locations on the excavation bottom and sidewalls. Laboratory chemical analysis of these soil samples will be utilized to confirm contaminate concentration end points in the excavation.

Soil samples will be retrieved from the backhoe bucket utilized for the excavation. Undisturbed soil samples will be retrieved from the backhoe bucket utilizing a drive tube push sampler. At least one sample will be taken at a depth of five feet below the deepest contamination to verify that all contamination is removed. Contaminated soil will be removed until total petroleum hydrocarbon (TPH) clean up levels of 100 ppm are reached.

NOT?

HOW WILL THIS BE DETERMINED PRIOR TO EXCAVATION?

Soil samples for potential chemical analysis will be monitored for hydrocarbon odors and volatile organic vapors using a photoionization detector (PID) equipped with a 10.2-electron-volt lamp and calibrated to an isobutylene standard. Typically, the soil samples with the highest PID readings will be submitted for chemical analysis. PID readings and hydrocarbon odors detected will be recorded and pertinent geologic and hydrogeologic aspects of the soils will be described by an EPI engineer of geologist.

Following the collection, description, and monitoring of the soils, the soil samples selected for laboratory chemical analysis will be removed from the drive tube sampler, sealed at both ends with Teflon lined plastic end caps, labeled, and immediately placed in a chilled field cooler with blue ice. This procedure will be followed to preserve the soil sample integrity and to minimize potential volatilization of the samples selected for possible chemical analysis.

Use Ice -

3.6 Laboratory Chemical Analysis

All soil samples will be transported and submitted in a chilled state and under chain of custody protocol to a State of California Department of Health Services certified analytical laboratory for chemical analysis of total petroleum hydrocarbons (TPH), as gasoline and diesel, utilizing EPA Method 8015 Modified and benzene, toluene, ethylbenzene, and xylenes (BTEX) utilizing EPA Method 8020.

Laboratory detection limits for TPH using modified EPA Method 8015 as gasoline will be 1 mg/kg, and 10.0 mg/kg for TPH as diesel. Detection limits for BTEX using EPA Method 8020 will be 0.05 mg/kg. Results of the chemical analysis will appear in table form and a copy of the lab results and chain of custody will be presented in an Appendix.

3.7 Report

After verbal approval to close the site a report of findings will be generated for CRDEH. This report will be inclusive of all graphics, sample results, scrap receipts and certificate of destruction for the soil. A draft will be submitted for review prior to final submittal.

4.0 CLOSURE

Should you have any further questions or requirements regarding this transmittal please call at 310-493-2190 between the hours of 8:00 a.m and 5:00 p.m.

Sincerely,

Brennan Mahoney
Soil Scientist

PERRIS CA 92571

Dear Owner:

RE: Evans Transportation 1936 Indian Ave, Perris CA

It has come to the attention of the Riverside County Department of Environmental Health, Hazardous Materials Branch that an unauthorized release has occurred from the underground storage tank system under your control. The resulting soil and/or groundwater contamination must be handled accordingly.

It is your responsibility under the California Code of Regulations Title 23 Waters, Division 3, Chapter 16, Article 11 to take corrective action for the unauthorized release at the above referenced site. At this time, a subsurface investigation must be conducted to delineate the lateral and vertical extent of soil contamination and determine the impact on groundwater, if applicable. Based on the results of this investigation, it is your responsibility to remediate the adverse effects of the unauthorized release.

Please be certain that you and your contractor(s) have all appropriate licenses and permits necessary to perform this work, such as a C-57 for well drilling, County of Riverside well permits, South Coast Air Quality Management District permits, etc. Copies of these documents should be available for inspection by County personnel on request. Results of all investigations must be submitted to this office in the form of technical reports prepared by a qualified professional who is registered as an engineer or geologist in the State of California.

Prior to conducting any work at the site, a detailed workplan must be submitted and accepted by this office. The workplan must be received on or before November 5, 1992.

DICK G EVANS (OWNER)
DICK G EVANS TRANSPORT
1936 INDIAN AVE
PERRIS CA 92571

Dear Owner:

RE: Evans Transportaion 1936 Indian Ave, Perris CA

The purpose of this letter is to inform you that County of Riverside, Department of Health, Environmental Health Services Division, Hazardous Materials Branch has entered into an agreement with the State of California Water Resources Control Board to oversee the cleanup and mitigation of contaminated sites resulting from the unauthorized release of hazardous substances from underground storage tanks. The cleanup of these sites is necessary to protect the groundwaters of the state from contamination and to protect the public from exposure from hazardous chemicals.

The oversight program developed by the State and administered by the County is funded by State and Federal monies and is subject to reimbursement by the responsible parties for each specific site. The County will account for time and materials expended at each cleanup site. On a routine basis, the State will be provided with the amounts detailing the time and expenses. The State will then invoice the responsible party for all direct and indirect cost associated with the cleanup of the site.

Enclosed you will find the Notice of Reimbursement. This is the formal notification concerning the reimbursement requirements for the responsible party. If any of the information is incorrect or if you should have any questions, contact this office as soon as possible at (714) 654-3878.

Sincerely,

Marc Brown
Hazardous Materials Specialist

cc:SWRCB
RWQCB

It is also your responsibility under California Code of Regulations Title 23 Water Section 2652(d) to provide at a minimum, a quarterly status report to this office every three (3) months until site investigation and cleanup are complete. The status report should detail any investigative, remedial, or other action taken regarding the site. The status report should include, at a minimum, information listed on the sample quarterly status report form enclosed with this letter. We suggest that you make copies of the report form for use each quarter. The quarterly status report shall be submitted within 15 days of the end of each quarter.

Quarter 1 - January thru March.... Submit by April 15
Quarter 2 - April thru June..... Submit by July 15
Quarter 3 - July thru September... Submit by October 15
Quarter 4 - October thru December. Submit by January 15

Failure to provide quarterly status reports in a timely manner may cause the responsible party to be placed in a recalcitrant status due to non-compliance. Recalcitrant responsible parties are not eligible for California Leaking Underground Fuel Tank Clean-Up Funds and may be subject to enforcement action.

Should you have any questions concerning this matter, please contact me at (714) 654-3878.

Sincerely,

Marc Brown
Hazardous Materials Specialist

APPENDIX C
HEALTH AND SAFETY PLAN

HEALTH AND SAFETY PLAN

This section presents the health and safety procedures that are intended to guide field activities at the Evans Transportation (ET) property located at 1936 Indian St., Perris, California. The provisions of this plan apply to employees of ET and it's subcontractors. Employees of federal, state and local agencies are expected to observe the safety rules and regulations established by their respective organizations in addition to the requirements of this document. This Health and Safety Plan (H&SP) is intended to provide health and safety procedures for work conducted by EPI.

Project Personnel

Personnel responsible for project safety are the Project Safety Officer (PSO), the Project Manager (PM), and the Site Safety Officer (SSO).

The PSO is responsible for delivering this Plan and any addenda to the PM, and for advising the PM and SSO on health and safety matters. The PSO has the authority to audit compliance with the provisions of this Plan, suspend work or modify work practices for safety reasons, and to dismiss individuals whose conduct on-site endangers the health and safety of others.

The PM is responsible for distributing this Plan to RE field personnel and to an authorized representative of each firm contracted to assist with on-site work. The PM is also responsible for delegation of responsibility to the SSO to implement the provisions of this H&SP and its addenda. Implementation includes review of field personnel's compliance with RE medical examination requirements, training of field personnel involved with the project, provision for the specified safety equipment, and submittal of the health and safety documents to the PSO. The authority of the PM is the same as that of the PSO.

The SSO is responsible for the on-site implementation of this site H&SP. The SSO's responsibilities include:

1) Maintaining safety equipment supplies
2) performing air quality measurements as required
3) directing decontamination operations and emergency response operations
4) setting up work zone markers and signs if such zones are specified in the site safety plan
5) reporting all accidents, incidents, and infractions of safety rules and requirements to the PM and the PSO.

The SSO has the authority to suspend work any time that he/she considers the provisions of the site safety plan inadequate to provide a working environment conducive to worker safety. The SSO is to inform the PM of individuals whose on-site presence jeopardizes their health and safety or the health and safety of others.

Project Description

The description of work to be conducted is described in the workplan prepared by EPI. The workplan includes the following types of activities:

- Excavation and loading of hydrocarbon contaminated soil into hazardous waste hauling registered end dump trucks.

Job Hazard Analysis

1) Hazardous Chemicals Reported at the Site

Based on prior experience and the laboratory results of chemical analysis of samples taken at the site the following potential hazardous materials may be encountered during the field work at the site:

1. Gasoline
2. Diesel
3. Cyclohexane
4. Hexane
5. Benzene
6. Toluene
7. Ethylbenzene
8. Xylenes

Table C-1 lists these chemicals along with exposure limits and exposure routes.

2) Dermal Exposure Hazard

Contact of sufficient duration to cause significant absorption of toxic components is judged to be highly unlikely. Repeated daily or prolonged contact with excavation spoils, however, could result in defattening of the skin and can, over a long period of time, lead to irritation and dermatitis. For this reason direct skin contact with spoils shall be avoided by wearing protective gloves. However, if contact does occur, the exposed area shall be washed and rinsed thoroughly.

3) Explosion Hazard

Elevated vapor concentrations may be present which could be sources for explosion. Caution must be taken to prevent sources of ignition such as cigarettes, open flames and electrical motors and related items which may not be explosion proof, within the restricted zone, and around the sampling ports, and the air outlets.

Activity Hazard

1) Excavating Procedures

A large backhoe will be in motion on site. Potential for being struck by moving machinery is present.

2) Noise Hazard

During start-up and operation of excavating and loading operations, the potential exists for exposure to excessive noise. Permanent hearing loss is due to the intensity and frequency distribution of the noise, the time pattern and duration of exposure, and individual

susceptibility. Sound level (noise) is measured in decibels (DBAS). The Threshold Limit Values for noise exposure is 85 DBAS for an 8-hour duration and 90 DBAS for a 4-hour duration.

3) Heat Stress Hazard
When temperatures exceed 70°F, take frequent breaks in a shaded area. Unzip or remove coveralls during breaks. Have cool water or electrolyte replenishment solution available. Drink small amounts frequently to avoid dehydration. Count the pulse rate for 30 seconds as early as possible in the rest period. If the pulse rate exceeds 110 beats per minute at the beginning of the rest period, shorten the work cycle by one-third.

General Health and Safety Requirements

1) Medical Clearance and Monitoring
All project personnel who may be required to wear respirators must provide evidence that they have been cleared by a physician to do so. All full-time employees of EPI are to be active participants in the EPI Medical Surveillance Program.

2) Safety Orientation Meeting
All field personnel (from EPI and its subcontractors) must attend a safety orientation meeting before commencing the field work. The meeting will be scheduled and conducted by the PM or the SSO. The meeting will include distribution of the H&SP to each field person covered by this Plan, presentation of the H&SP, and signature of the waiver by each person covered by this Plan.

3) Safety Training
Under 29CFR 1910.120(e), all field personnel are to have passed 40-hours of health and safety training course and, if necessary, 8-hours of supervisory training.

4) Work Zone
A restricted access work zone will be maintained to a distance of approximately 25-feet from each work area. Protective clothing and equipment, as described below in Subsection 5.4, are to be worn by all personnel working within the restricted zone. The restricted zone is to be delineated by fence barriers and/or caution tape. A designated decontamination zone will be established for clothing change and disposable clothing storage.

Protective Equipment and Clothing - Level C

1) Levels of Protection
This proposal is based upon Level D personnel protection measures. Should the consultant decide site conditions warrant more cautious or stringent safety precautions, he/she will automatically implement a higher degree of safety (Level C). If the outlined scope of work cannot be completed in Level D conditions, the consultant will notify the client in writing of the more stringent safety conditions.

LEVEL D -Coveralls, safety vests, hard hats, eye protection, gloves, boots
LEVEL C -TYVEK coveralls, gloves, air purifying respirator
LEVEL B -TYVEK coveralls, double gloves, self-contained air

2) Equipment Required for Field Personnel

- Hard hat;
- Safety goggles or glasses;
- Hooded coveralls (disposable);
- Disposable over-boots (waterproof with steel toes);
- Gloves (latex and/or nitryl).

3) Equipment Required to be Available On Site During Excavation/Loading Operations

- One respirator per person (half-mask with disposable organic vapor-dust/mist cartridges);
- Earplugs for each field person;
- First-aid kit with eye wash;
- Construction tape and barriers to delineate work zone;
- A vehicle, with keys in the ignition, must be kept on-site when personnel are working for the transport of slightly injured personnel to the hospital. Severely injured personnel MUST ONLY be transported by paramedics;
- Fire extinguisher(s) in site vehicle(s) and in work zone(s).

4) Supplied Air Respirator Usage
Supplied air respirator use is not applicable at this site.

5) Earplug Usage
The PSO and/or the PM is responsible for deciding if earplug use should be routine or based on noise monitoring measurements. Consistent noise level readings in excess of 85 DBAS will be used to implement hearing protection controls. The subcontractor is responsible for providing earplugs for their employees.

6) Buddy System
All field personnel are to work with another person at the site. The subcontractor's representative can serve as the second person while the work is being conducted in the field. Under no circumstances are field personnel to work alone at the site while conducting field activities.

VOC Monitoring
The VOC concentration (as measured by the PID) in the breathing zone of the individual working closest to the vapor source must be monitored. Respirators must be donned if the concentration averages 10 ppm above background levels. Work must stop if the concentration averages 10 ppm above background levels and the procedures described in Subsection 5.4.3 are to be followed prior to restarting the job operations.

Noise Level Monitoring
Noise will be monitored during operations to assess if levels are below recommended exposure limits. This will be accomplished by using a noise level meter or similar instruments. A monitor will be placed in an area where the potential for noise exposure may be greatest. The monitor may be placed on personnel directly exposed or in an environment of high potential exposure.

Emergency Response Procedures

1) Physical Injury

In the event of an accident resulting in physical injury, apply emergency first aid only and call paramedics. Severely injured personnel are to be transported only by paramedics and/or by ambulance personnel. At the hospital, a physician's attention is mandatory regardless of how serious the injury appears. The PSO and the PM are to be notified by the SSO as soon after the injury as practical regarding the nature of the accident. A written report is also to be prepared by the SSO.

attn: Tank Removal Lab Results

Re: Evans Transportation, 1936 Indian Avenue, Perris

On August 10, 1992, the subject site had an 8,000 gallon diesel tank and a 2,000 gallon gasoline tank removed under permit number 92-216. Six soils samples were taken for analysis at two and six feet under the tank invert as directed by the County of Riverside inspector present at the site.

Attached are pertinent documentation for the removal and the laboratory analysis results for the subject site. Samples TA1-2, TA1-6, TB1-2, and TB1-6 were taken under the diesel tank and samples T2-2 and T2-6 were taken under the gasoline tank.

UNDERGROUND STORAGE TANK PERMIT FOR CLOSURE

TYPE OF PERMIT

Removal	(X)
Abandonment in Place	( )
Temporary Closure	( )

This permit shall not be construed as to allow the violation of any law, nor does it prevent further corrections of errors found on the application, plans, or at the site. Plans must be resubmitted for approval if any additional changes are made by the applicant.

In addition to this permit, all applicable permits required by the local fire department, building department, and the air quality management district must be obtained and should be available for review at the closure site.

All tank closures must, at a minimum, comply with the California Underground Storage Tank Regulations and the appropriate section of the California Health & Safety Code.

D.L. WIEST has applied for and is granted a permit to
(Owner/Contractor/Applicant)

REMOVE (Remove/Abandon/Temp. Close) 2 (No.) underground storage tank(s) at

EVANS TRUCKING (Facility Name) located at

1936 INDIAN (Street Address) in PERRIS (City/Town), California.

Underground tank closure inspections **must be scheduled five (5) business days in advance.** Telephone (714) 358-5055.

INSTRUCTIONS

EMERGENCY
Indicate whether emergency response personnel and equipment were involved at any time. If so, a Hazardous Material Incident Report should be filed with the State Office of Emergency Services (OES) at 2800 Meadowview Road, Sacramento, CA 95832. Copies of the OES report form may be obtained at your local underground storage tank permitting agency. Indicate whether the OES report has been filed as of the date of this report.

LOCAL AGENCY ONLY
To avoid duplicate notification pursuant to Health and Safety code Section 25180.7, a designated government employee should sign and date the form in this block. A signature here does not mean that the leak has been determined to pose a significant threat to human health or safety, only that notification procedures have been followed if required.

REPORTED BY
Enter your name, telephone number, and address. Indicate which party you represent and provide company or agency name.

RESPONSIBLE PARTY
Enter name, telephone number, contact person, and address of the party responsible for the leak. The responsible party would normally be the tank owner.

SITE LOCATION
Enter information regarding the tank facility. At a minimum, you must provide the facility name and full address.

IMPLEMENTING AGENCIES
Enter names of the local agency and Regional Water Quality Control Board involved.

SUBSTANCES INVOLVED
Enter the name and quantity lost of the hazardous substance involved. Room is provided for information on two substances if appropriate. If more than two substances leaked, list the two of most concern for cleanup.

DISCOVERY/ABATEMENT
Provide information regarding the discovery and abatement of the leak.

SOURCE/CAUSE
Indicate source(s) of leak. Check box(es) indicating cause of leak.

CASE TYPE
Indicate the case type category for this leak. Check one box only. Case type is based on the most sensitive resource affected. For example, if both soil and ground water have been affected, case type will be "Ground Water". Indicate "Drinking Water" only if one or more municipal or domestic water wells have actually been affected. A "Ground Water" designation does not imply that the affected water cannot be, or is not, used for drinking water, but only that water wells have not yet been affected. It is understood that case type may change upon further investigation.

CURRENT STATUS
Indicate the category which best describes the current status of the case. Check one box only. The response should be relative to the case type. For example, if case type is "Ground Water", then "Current Status" should refer to the status of the ground water investigation or cleanup, as opposed to that of soil. Descriptions of options follow:

No Action Taken - No action has been taken by responsible party beyond initial report of leak.
Leak Being Confirmed - Leak suspected at site, but has not been confirmed.
Preliminary Site Assessment Workplan Submitted - workplan/proposal requested of/submitted by responsible party to determine whether ground water has been, or will be, impacted as a result of the release.
Preliminary Site Assessment Underway - implementation of workplan.
Pollution Characterization - responsible party is in the process of fully defining the extent of contamination in soil and ground water and assessing impacts on surface and/or ground water.
Remediation Plan - remediation plan submitted evaluating long term remediation options. Proposal and implementation schedule for appropriate remediation options also submitted.
Cleanup Underway - implementation of remediation plan.
Post Cleanup Monitoring in Progress - periodic ground water or other monitoring at site, as necessary, to verify and/or evaluate effectiveness of remedial activities.
Case Closed - regional board and local agency in concurrence that no further work is necessary at the site.

IMPORTANT: THE INFORMATION PROVIDED ON THIS FORM IS INTENDED FOR GENERAL STATISTICAL PURPOSES ONLY AND IS NOT TO BE CONSTRUED AS REPRESENTING THE OFFICIAL POSITION OF ANY GOVERNMENTAL AGENCY

REMEDIAL ACTION
Indicate which action have been used to cleanup or remediate the leak. Descriptions of options follow:

Cap Site - install horizontal impermeable layer to reduce rainfall infiltration.
Containment Barrier - install vertical dike to block horizontal movement of contaminant.
Excavate and Dispose - remove contaminated soil and dispose in approved site.
Excavate and Treat - remove contaminated soil and treat (includes spreading or land farming).
Remove Free Product - remove floating product from water table.
Pump and Treat Groundwater - generally employed to remove dissolved contaminants.
Enhanced Biodegradation - use of any available technology to promote bacterial decomposition of contaminants.
Replace Supply - provide alternative water supply to affected parties.
Treatment at Hookup - install water treatment devices at each dwelling or other place of use.
Vacuum Extract - use pumps or blowers to draw air through soil.
Vent Soil - bore holes in soil to allow volatilization of contaminants.
No Action Required - incident is minor, requiring no remedial action.

COMMENTS - Use this space to elaborate on any aspects of the incident.

SIGNATURE - Sign the form in the space provided.

DISTRIBUTION
If the form is completed by the tank owner or his agent, retain the last copy and forward the remaining copies intact to your local tank permitting agency for distribution.
1. Original - Local Tank Permitting Agency
2. State Water Resources Control Board, Division of Loans and Grants, Underground Storage Tank Program, P.O. Box 944212, Sacramento, CA 94244-2120
3. Regional Water Quality Control Board
4. County Board of Supervisors or designee to receive Proposition 65 notifications.

subcontractors. Employees of federal, state and local agencies are expected to observe the safety rules and regulations established by their respective organizations in addition to the requirements of this document. A complete health and safety plan is presented in Appendix C.

3.3 Excavation

Site excavation activities will be directed by an EPI engineer or soil scientist. EPI anticipates that an estimated 50 cubic yards (approximately 75 tons) of contaminated native soil will have to be excavated from the former underground storage tank area to sufficiently remove the diesel and gasoline contaminated soil. The approximate area of soil to be excavated is shown on the site diagram (Figure 2) and the total depth of the excavation is expected to be less than ten feet (bgs).

Contaminated soil will be removed by a backhoe and segregated based on contaminant concentration. Filed measurements will be made with an Hnu PID and spoils will be segregated in to apparently clean and apparently contaminated spoils piles. Both spoils piles will have one sample per 25 cubic yards of soil taken for lab analysis. Analysis for TPH and BTEX will be performed on each sample taken.

Excavation activities will include the following:

- emissions monitoring in accordance with Air Quality Management Rule 1166.
- site verification sampling
- regulatory interface
- stockpiling and covering of soil at pre-determined locations

3.4 Soil Treatment

Contaminated soil will be transported upon removal by truck to Thermal Process Systems (TPS) as a non hazardous material for recycling as roadbase. TPS will stipulate in a contract that material from the site will be used as roadbase upon completion of treatment. TPS is a fully permitted resource recovery facility able to treat and recycle hydrocarbon contaminated soils. Based on all previous laboratory data the estimated amount of soil to be removed is considered acceptable for treatment under the provisions of the TPS permit for re-cycling activities.

3.5 Verification Sampling

During the assessment excavation approximately six (6) confirmation end point soil samples will be collected from selected locations on the excavation bottom and sidewalls. Laboratory chemical analysis of these soil samples will be utilized to confirm contaminate concentration end points in the excavation.

Soil samples will be retrieved from the backhoe bucket utilized for the excavation. Undisturbed soil samples will be retrieved from the backhoe bucket utilizing a drive tube push sampler. At least one sample will be taken at a depth of five feet below the deepest contamination to verify that all contamination is removed. Contaminated soil will be removed until total petroleum hydrocarbon (TPH) clean up levels of 100 ppm are reached.

Soil samples for potential chemical analysis will be monitored for hydrocarbon odors and volatile organic vapors using a photoionization detector (PID) equipped with a 10.2-electron-volt lamp and calibrated to an isobutylene standard. Typically, the soil samples with the highest PID readings will be submitted for chemical analysis. PID readings and hydrocarbon odors detected will be recorded and pertinent geologic and hydrogeologic aspects of the soils will be described by an EPI engineer of geologist.

Following the collection, description, and monitoring of the soils, the soil samples selected for laboratory chemical analysis will be removed from the drive tube sampler, sealed at both ends with Teflon lined plastic end caps, labeled, and immediately placed in a field cooler with approximately 20% of the cooler volume occupied by ice. This procedure will be followed to preserve the soil sample integrity and to minimize potential volatilization of the samples selected for possible chemical analysis.

3.6 Laboratory Chemical Analysis

All soil samples will be transported and submitted in a chilled state and under chain of custody protocol to a State of California Department of Health Services certified analytical laboratory for chemical analysis of total petroleum hydrocarbons (TPH), as gasoline and diesel, utilizing EPA Method 8015 Modified and benzene, toluene, ethylbenzene, and xylenes (BTEX) utilizing EPA Method 8020.

Laboratory detection limits for TPH using modified EPA Method 8015 as gasoline will be 1 mg/kg, and 10.0 mg/kg for TPH as diesel. Detection limits for BTEX using EPA Method 8020 will be 0.05 mg/kg. Results of the chemical analysis will appear in table form and a copy of the lab results and chain of custody will be presented in an Appendix.

3.7 Report

After verbal approval to close the site a report of findings will be generated for CRDEH. This report will be inclusive of all graphics, sample results, scrap receipts and certificate of destruction for the soil. A draft will be submitted for review prior to final submittal.

1.0 EXECUTIVE SUMMARY

On behalf of Ms. Sandee Hackett and the Val Verde Unified School District, Advanced Environmental Concepts, Inc. (AEC) performed a Phase-I Preliminary Site Assessment (PSA) on property known as Val Verde Elementary School in Perris, California. This PSA was performed during April 2000 and includes land presently developed as a public elementary school. This PSA has identified the following recognized environmental conditions at the subject property:

- The school operated two underground storage tanks (USTs) from the early 1970's until their removal in 1993. The capacity of the USTs were 1,000 gallons each and one was diesel, and one was gasoline. The two dispensers were sited on a concrete pad offset from the USTs to the south. The USTs were reported to be in good shape, however, the piping exhibited rust and pitting. Soil contamination was discovered in the pipe trench, and trace hydrocarbon concentrations were detected beneath the USTs.

  AEC recommended re-excavation of the tank and piping area and collection of soil samples from the floor and sidewalls. Samples were analyzed for TPH-gasoline, volatile aromatics, and MTBE. (See attached Workplan and Final Excavation Remediation Report.)

- Waste paint, roofing sealant, used batteries, and a 55 gallon drum of PCB laden ballast are stored on wooden pallets in a chain-linked fenced area proximal to the old transportation building.

  AEC recommends removal of the waste paints and sealants on a Riverside County approved waste-reduction day. The PCB ballasts were disposed of at Earth Protection Services Inc. (ESPI) on June 28, 2000. (See attached disposal documentation.)

- The Val Verde Elementary School is on an Asbestos Surveillance Program. The past inspections have indicated asbestos containing floor tile in classrooms 43 through 52, and portable classrooms 22 through 27, asbestos containing TSI elbow, pipes, and valves in the boiler room, and tile in the administration hall entry, multi-purpose kitchen, and multi-purpose room.

  AEC recommends continued inspection of the property at 6 month intervals and full re-inspection every three years.

- There were no records indicating that the exterior/interiors of the buildings have been tested for lead based paint.

  AEC recommends testing for lead-based paint and the installation of a surveillance and maintenance program.

- Small containers of a variety of chemicals including various cleansers, waxes, gasoline, and paints are located in the custodial closet areas of the school. All of these various cleansers used in cleaning of the windows, floors, and interiors of the buildings are stored on wooden shelves over cement floors, or in placarded metal locked cabinets. All of the "hazardous classified" substances are locked in the custodial closets.

  AEC recommends the continued storage of all chemicals in locked cabinets. Also, in case of fire, and to prevent fire department personnel from inhaling hazardous concentrations of burning chemicals, AEC recommends a more thorough documentation of quantity and location of the maintenance materials.

  If above started recommendations are completed, AEC then respectfully requests a "no further action" site designation.

2.0 INTRODUCTION

2.1 Purpose

The purpose of this assessment is to identify recognized environmental conditions located at the subject site or adjacent properties which could present material risk of harm to public health or to the environment. Recognized environmental conditions are defined within ASTM Designation E-1527 as the presence or likely presence of any hazardous wastes and/or substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property.

2.2 Special Terms and Conditions

The information included in this report is intended for use exclusively as a preliminary assessment of potential environmental and human health concerns at the project site. Data was obtained through telephone conversations, personal interviews, public records, public information, general maps and aerial photographs. These services have been rendered by **Advanced Environmental Concepts, Inc.** (**AEC**) in accordance with generally accepted practices by professional hydrogeologists and environmental specialists. Because of the limited nature of this investigation, the firm is precluded from providing a warranty, expressed or implied, regarding the presence of hazardous materials that could potentially adversely affect the subject site.

This report is provided with the understanding that it is the responsibility of the owner to convey the information and recommendations contained herein, to the appropriate regulatory agencies, as required. The services performed in the scope of this project are for the sole use of our client. Others who seek to rely on the findings contained within this report have a duty to determine the adequacy of the information presented herein, for their time, location, and intended use.

This assessment has been conducted in accordance with ASTM E 1527 guidelines for scope of work to be contained within Environmental Site Assessments.

2.3 Limitation and Exceptions of Assessment

This report presents the results of a Phase-I Environmental Site Assessment conducted by **Advanced Environmental Concepts, Inc.** (**AEC**) for Ms. Sandee Hackett on behalf of Val Verde Unified School District (client), on the following property:

Val Verde Elementary School
2656 Indian Avenue
County of Riverside • Perris, California

No other properties were included within the scope of this assessment except as required for the off-site reconnaissance and for the regulatory agency database and file review pertaining to potential sources of offsite recognized environmental concerns. Historical information regarding the subject parcels is limited to review of public documents, interviews with persons knowledgeable with the past and present uses and conditions of the property, and historic mapping and aerial photography review.

2.4 Limiting Conditions and Methodology

To evaluate the potential presence of recognized environmental conditions, this preliminary investigation was conducted in accordance with ASTM Designation E-1527 and consisted of the following:

- Contacting appropriate regulatory agencies for hazardous materials information concerning the subject site and surrounding areas located within an approximate ¼-mile radius of the site boundaries. Inquiries were made regarding documentation of: (a) toxic spills; (b) underground storage tanks; (c) the use, storage, generation, and/or disposal of hazardous materials; (d) the presence of disposal wells and/or leach fields, drain fields, and septic systems; and, (e) violations of applicable environmental control standards;
- Conducting interviews and researching historical site usage for information regarding past or present recognized environmental conditions;
- Reviewing selected reports, maps, and aerial photographs for information pertaining to potential sources or visual indications of soil and groundwater contamination;
- Conducting an on-site inspection and off-site reconnaissance to identify visible evidence of the generation, use, storage, release, or disposal of hazardous materials;
- Evaluating investigational findings and the preparation of a detailed report inclusive of findings and recommendations.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The subject property consists of an older vintage existing grade school facility complete with classrooms, a small gymnasium, administrative offices, cafeteria, grass fields, sandy swing and jungle jim play area, paved basketball courts, paved parking areas, modular classroom units, and associated grounds. The site is located at 2656 Indian Avenue in Perris. The elementary school is on the west side of Indian Avenue on a level grade of the valley floor. The school is in a rural setting and is surrounded by farm property to the east, south, and west, and residences to the north. The farm property is planted to commercial sod and is operated by A-G Sod Farms.

3.2 Site and Vicinity Characteristics

3.2.1 Physiographic Setting[1]

The Val Verde Elementary School lies in the central portion of the Perris Plain, within the Santa Ana basin, which covers an area of approximately 2,000 square miles and is part of the Peninsular Ranges Province. Other major features in the area are the Pacific Coastal Plain to the west, the Transverse Ranges (including the San Bernardino and San Gabriel Mountains) and the Mojave Desert to the north, and the San Jacinto Mountains and Colorado Desert to the east.

The Perris Plain is a semi-arid, north-south trending alluvial valley bounded by low-lying granitic bedrock on the west and a series of tributary valleys and granitic mountains to the east. The valley floor has a gentle slope of approximately 20 feet per mile in a south-southeasterly direction. Ground surface elevations range from 1,400 to 1800 feet above mean sea level[2].

The Perris Plain is a broad, nearly flat plain where alluvium is found at the surface. The numerous bedrock hills that interrupt this flat surface are described as erosional remnants of the underlying crystalline basement rocks. The surface of low relief was developed on the crystalline basement material and drainage was typically to the east along the San Jacinto River. Development of this channelized surface was followed by periods of sedimentation. Drainage shifted toward the west and deposition of recent alluvium buried the Perris Surface, forming the relatively flat Perris Plain.

The Perris Plain alluvial deposits are composed of alternating layers of varying amounts of gravel, sand, silt, and clay. Thickness of the alluvium varies between a few feet to over 800 feet.

Groundwater in the Perris Valley is found in the coarse-grained alluvial deposits. These deposits are highly permeable and capable of yielding large quantities of water under unconfined conditions. The groundwater system in the Perris and Moreno valleys is almost completely surrounded by non water-bearing rocks such that the amount of water flowing into, or out of the basin is considered negligible. Natural recharge to the aquifer results primarily from infiltration and precipitation. Artificial recharge occurs near the housing area and Heacock Storm Drain which cause localized groundwater highs which locally affect the groundwater flow direction. Regional groundwater flow generally mimics the topographic gradient, which is to the south-southeast. First unconfined groundwater is generally identified between 50 to 75 feet below ground surface (bgs), however, "perched" water may be found in the valley floor at depths ranging from 10 to 50 feet bgs.

The elementary school site lies between two major fault zones: the Elsinore-Whittier, 13 miles to the southwest; and the San Jacinto, 7 miles to the northeast. The area between the two faults is known as the perris Block, or Perris Plain. These northwest trending fault zones are considered active faults by the California Division of Mines and Geology. Movement along these fault zones is predominately right lateral strike-slip. The area is classified in Seismic Hazard Zone IV and is characterized by areas likely to sustain major damage from earthquakes.

Two major soil associations are present in the area: the Cieneba-Rocky Fallbrook association, and the Monserate-Arlington-Exeter association. The Cieneba-Rocky Fallbrook association is derived from granitic rock, are typically 1 to 3 feet in thickness, have a surface layer of sandy loam to fine sandy loam, are well-drained, and have slopes ranging from 2 to 50 percent. These soils occur on undulating to steep terrain, such as granitic rock uplands and low mountains. The Monserate-Arlington-Exeter association is derived from granitic alluvium, have a surface layer of sandy loam to fine sandy loam, are well drained, and are gently sloping[3].

3.3 Description of Structures, Roads, & Other Site Improvements

Val Verde Elementary School was originally constructed in 1959 and consists of three main structures which house classrooms, administrative offices, cafeteria, kitchen, and library. The original main buildings are surrounded by temporary modular classrooms to the south and east. The western portion of the property is developed with the grass and sand playgrounds. The area of the former UST locations is a chain-linked fenced, gravel packed area to the north of the cafeteria building. An old wooden building that used to be transportation, then maintenance and operation headquarters, is within the compound. Also included in this area is waste paint, roofing sealant, old batteries, and an unmarked 55-gallon drum full of fluorescent light ballasts. Paved parking, and drive-through areas are located along the eastern area of the property at the front of the buildings.

3.4 Environmental Liens

No indication of current environmental liens was provided to **AEC** by the user or obtained from any other informational source during this assessment.

3.5 Onsite Water Supply

Val Verde Elementary School is located within the East Municipal Water District. Water for onsite use is supplied to the site by the municipal water system. No onsite domestic or agricultural wells were identified during the site reconnaissance portion of this assessment.

3.6 Current Uses of the Property

The subject property is developed as a public elementary school, and includes an administrative building, classrooms, basketball courts, and grass and sand playing fields.

3.7 Past Uses of the Property

Based on reviews of historical USGS maps and reviews of aerial photographs beginning in 1947, the subject property consisted of undeveloped range and farm land prior to the construction of the present school campus in 1959. No previous industrial development was identified within the limits of the property.

3.8 Current and Past Uses of Adjoining Properties

The site and surrounding areas were principally undeveloped, with sparse rural residential housing. The surrounding area consists of a level valley floor and the area has been used for farming. The adjacent to property to the east, west, and south is planted to commercial grade sod, and to the north are two residences.

4.0 RECORDS REVIEW

4.1 Standard Federal and State Environmental Record Sources

AEC contracted **EDR Environmental Information, Inc.**[4] to perform searches of readily available Federal, State, and Local database information systems for the purpose of identifying known recognized environmental conditions present on nearby properties which have the potential to adversely impact the site being assessed in this study. Information provided by EDR identified one site that is within 1/8 to 1/4 mile from the property that has had a release of gasoline in 1993. The site was signed off on June 17, 1993 and remedial action was not required. AEC attempted to drive to the listed address; however, it was over one mile in distance from the school.

The elementary school was also listed as disposing of 1 ton of empty containers having capacity of 30 gallons, or greater. The Val Verde School District has no record of this disposal.

4.2 Historical Use Information

4.2.1 Aerial Photograph and Historical USGS Map Review[4]

Historical aerial photograph coverage and USGS Map coverage of the site were reviewed in order to evaluate past site usage. No Sanborn Fire Insurance Map coverage is available for this area of Riverside County. Visual observations noted within these photographs and maps are described chronologically as follows:

Map Date: 1947 **Quadrangle: Perris** **Scale: 1:50,000**

By 1947, the Atchison, Topeka, and Santa Fe Railroad, State Highway Route 395, Riverside Street, Orange Avenue, Perris Boulevard, and Rider Street were all in place. There were no indications of onsite structures or developments at the time of this map survey. An irrigation water storage reservoir was present on the east side of Riverside Street, across from the east edge of the school property.

Flight Date: 1953 **Flyer: Pacific Air** **Scale: 1"=1,111'**

Striated mowing patterns visible on the surface of the subject property at the time of the 1953 aerial survey indicate that the property was under cultivation of alfalfa or dryfarmed grain at this time. An irrigation water storage reservoir and farming compound were present on nearby property along the east side of Riverside Street at this time. No indications of structures or other onsite developments were observed. Adjoining lands on all sides appeared to be cultivated with similar hay or dryfarmed grain at this time. Resolution of visual detail in this photograph is good.

Flight Date: 1967 **Flyer: Western** **Scale: 1"=1,200'**

By the time of the 1967 aerial survey, the subject property had been developed as a school with multiple buildings. Adjacent parcels north, east, south, and west remained under agricultural and single-family residential development. Except for the construction of the school facility, no other significant developments or land usage changes were noted. Resolution of visual detail in this photograph is good.

Flight Date: 1989 **Flyer: USGS** **Scale: 1"=666'**

By 1989, nearby property located approximately 1/4 mile northeast of the school site was developed with what appears to be a large commercial warehouse. Adjoining properties east, south, and west remained under agricultural cultivation at this time. A small residential development occupied adjoining property due north of the site at the time of the 1989 aerial survey. Resolution of visual detail in this photograph is moderate.

Flight Date: 1994 **Flyer: USGS** **Scale: 1"=666'**

The subject property and surrounding parcels were under similar development as depicted in previous map and aerial surveys. State Highway Route 395 present a short distance to the west of the site was under construction to widen the roadway and provide additional access roads. An additional complex that appears to be a commercial business plaza had been constructed at the northeast corner of Perris Boulevard and Nuevo Road, approximately ½ mile southeast of the school property between 1989 and 1994. No other significant land usage changes or developments were noted. Resolution of visual detail in this photograph is good.

4.2.2 Riverside County Planning and Development Department[5]

The Riverside County Planning and Development Department maintains records of building permits issued for construction undertaken within the Moreno and Perris valleys. These records were researched and contained no information pertaining to the construction of the Val Verde Elementary School, or construction on the property prior to the development of the high school. Review of historic aerial photograph coverage of the site supports the original construction date in the 1959.

4.3 Additional Record Sources

4.3.1 Riverside County Agricultural Commissioner[6]

The Riverside County Agricultural Commissioner's Office maintains records pertaining to restricted chemical pesticides and/or herbicides registered for application to properties within Riverside County. These files contained no current or past information regarding restricted agricultural chemicals use or storage at the Val Verde Elementary School facility.

4.3.2 Riverside County Department of Environmental Health[7]

The Riverside County Department of Environmental Health (RCDEH) maintains records of underground storage tanks (UST's) and incidents of unauthorized releases of hazardous materials from underground storage tanks at the subject site and surrounding areas. RCDEH records contained no reference to past or present aboveground storage tanks, unauthorized releases of hazardous materials, disposal wells or leach fields pertaining to the site being assessed in this study. RCDEH records contained limited and incomplete information regarding the removal of two 1,000 gallon gasoline and diesel USTs at the subject property. There was hydrocarbon staining in the piping trench, however, the tank emplacements tested "clean". No analytical results were found for the piping trench; however, the analytical results for the samples collected beneath the USTs are included in

Appendix 10.3. AEC re-opened the UST case in July, 2000 (see attached Workplan and Excavation Remediation Report, Appendix 10.4 and 10.5).

Riverside County Department of Environmental Health also keeps records of Inventory of Hazardous Substances. The review indicates minor quantities of copier toner, duplicating fluid, and household cleansers are used in the daily operation of the school.

4.3.3 California Department of Conservation - Division of Oil & Gas[9]

No onsite oil or gas wells were identified during the site reconnaissance or within D.O.G. maps reviewed during this assessment.

5.0 INFORMATION FROM SITE RECONNAISSANCE AND INTERVIEWS

5.1 Hazardous Substances in Connection with Identified Uses

Hazardous substances identified at the property during the site reconnaissance include the bulk storage of hazardous materials stored in individual custodial lockers containing small vessels of a wide variety of miscellaneous cleansers, waxes, and paints used during the daily operation and maintenance of the school. These small custodial lockers remain locked at all time.

Also, waste paint and roofing sealant, old batteries, and a 55 gallon drum full of fluorescent light ballasts are stored on wooden pallets in a fenced compound area. There are no provisions for secondary containment for the waste paint and sealant.

5.2 Unidentified Substance Containers

There were no unidentified substance containers observed at the site during the site reconnaissance portion of this assessment.

5.3 Storage Tanks

No visual indications of existing above or below ground storage tanks used for past or present hazardous materials storage were identified during the course of this preliminary site assessment.

In 1993 Val Verde removed two USTs from the north side of the school, by the old transportation building. The USTs tested "clean", however, there was visible contamination in the piping trench. The area has been assessed and remediated during July 2000, and a "no further action" letter has been received from the County in August 2000.

5.4 Indications of PCB(s)

Pole-mounted electric transformers were observed on the border of the subject property during the site reconnaissance portion of this assessment. These transformers appeared

to be in good operational condition with no leakage or staining noted. Regional electric transformers are owned and operated by Southern California Edison (SCE)[10]. According to information obtained from SCE, all transformers within the SCE power distribution network suspected of containing PCB's in concentrations exceeding 50 parts per million were removed and replaced by 1987. Manufacture of PCB-containing electric power transformers was discontinued in 1984.

Polychlorinated Biphenol sampling and laboratory analyses is beyond the scope of this preliminary site assessment.

PCB light ballasts were stored in a 55 gallon drum in the former maintenance yard. The drum of light ballasts were removed and disposed for recycling at EPSI's facility on June 28, 2000. (See attached documentation.)

5.5 Indications of Solid Waste Disposal

Solid waste generated at the site is staged in metal bins and transported offsite for disposal by a private rubbish contractor. No indications of illegal dumping were observed within the limits of the property during the site reconnaissance portion of this assessment

5.6 Indications of Waste Water Disposal

Waste waters generated in the sanitary facilities, kitchen facility, and classrooms are discharged into the municipal sewer system.

5.7 Physical Setting Analysis

5.7.1 Designated Wetlands[11]

Under U.S. Army Corps of Engineers (USACE) regulations, wetlands are defined as "those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions." Wetlands generally include swamps, marshes, bogs and similar areas such as sloughs, prairie potholes, wet meadows, river overflows, mud flats, and natural ponds.

Based on visual observations made during the site reconnaissance, review of USGS topographic maps, and aerial photography review, the subject property would not be classified as Designated Wetlands Areas. However, in the surrounding the area vernal pools have been identified as well as willow-dominated riparian corridors.

5.8 Any Other Conditions of Concern

5.8.1 Radon[12]

Radon is a colorless, odorless, tasteless, naturally occurring radioactive gas formed by the

decay of uranium in soil and bedrock. Because uranium and radon occur naturally in varying amounts within rocks and soils found throughout the United States, radon is present in all the air that we breathe. Long-term exposure to elevated concentrations of radon in confined areas has been associated with an increased risk of lung cancer. The present action levels require exposure to concentrations of at least four picocuries/liter (4 pCi/L) of radon over an extended period of time. The State of California Department of Health Services conducted radon surveys across portions of Riverside County, during 1990. These surveys indicate the presence of radon in concentrations between 2 pCi/L to 4 pCi/L within Riverside County.

5.8.2 Asbestos Containing Materials (ACM's)

Asbestos containing materials (AMC's) were commonly used in a wide variety of building products such as roofing shingles, composite siding, linoleum flooring, acoustic ceiling tiles, furnace and water heater exhaust piping and insulation, glues and mastics, stucco, joint compounds, and composite wallboards prior to 1980. ACM's can be divided into material considered friable (easily crumbled or reduced to powder) and nonfriable. Friable ACM's are regulated as hazardous materials due to the elevated long-term risk of developing lung cancer upon respiratory exposure and must be properly removed prior to renovation or demolition of any structure containing these materials. In addition to structures, ACM's have been historically used as "Transite" irrigation piping within many agricultural parcels throughout California. No Transite piping was visually identified during the site reconnaissance portion of this assessment.

The Val Verde Elementary School is on an Asbestos Surveillance Program. The past inspections have indicated asbestos containing floor tile in classrooms 43 through 52, and portable classrooms 22 through 27, asbestos containing TSI elbow, pipes, and valves in the boiler room, and tile in the administration hall entry, multi-purpose kitchen, and multi-purpose room.

AEC recommends continued inspection of the property at 6 month intervals and full re-inspection every three years.

Asbestos sampling and laboratory analyses is beyond the scope of this preliminary site assessment.

5.8.3 Lead

According to information published by the United States Department of Housing and Urban Development (HUD), approximately three out of every four pre-1978 buildings contain lead-based paint[13]. Based on the age of construction of the school structures (1959), there is a potential presence of lead-based paint and plumbing components within the onsite buildings.

Lead sampling and laboratory analyses is beyond the scope of this preliminary site assessment.

6.0 FINDINGS AND CONCLUSION

AEC has performed a Phase-I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527 of: **"Property identified as: Val Verde Unified School District, Val Verde**

Elementary School; 2656 Indian Avenue; Perris; Riverside County, California." Any exceptions to, or deletions from this practice are described in Sections 2.2-2.4 of this report. This assessment has revealed the following recognized environmental conditions in connection with the property:

- The school operated two underground storage tanks (USTs) from the early 1970's until their removal in 1993. The capacity of the USTs were 1,000 gallons each and one was diesel, and one was gasoline. The two dispensers were sited on a concrete pad offset from the USTs to the south. The USTs were reported to be in good shape, however, the piping exhibited rust and pitting. Soil contamination was discovered in the pipe trench, and trace hydrocarbon concentrations were detected beneath the USTs.

  AEC recommended re-excavation of the tank and piping area and collection of soil samples from the floor and sidewalls. Samples were analyzed for TPH-gasoline, volatile aromatics, and MTBE. (See attached Workplan and Final Excavation Remediation Report.)

- Waste paint, roofing sealant, used batteries, and a 55 gallon drum of PCB laden ballast are stored on wooden pallets in a chain-linked fenced area proximal to the old transportation building.

  AEC recommends removal of the waste paints and sealants on a Riverside County approved waste-reduction day. The PCB ballasts were disposed of at Earth Protection Services Inc. (ESPI) on June 28, 2000. (See attached disposal documentation.)

- The Val Verde Elementary School is on an Asbestos Surveillance Program. The past inspections have indicated asbestos containing floor tile in classrooms 43 through 52, and portable classrooms 22 through 27, asbestos containing TSI elbow, pipes, and valves in the boiler room, and tile in the administration hall entry, multi-purpose kitchen, and multi-purpose room.

  AEC recommends continued inspection of the property at 6 month intervals and full re-inspection every three years.

- There were no records indicating that the exterior/interiors of the buildings have been tested for lead based paint.

  AEC recommends testing for lead-based paint and the installation of a surveillance and maintenance program.

- Small containers of a variety of chemicals including various cleansers, waxes, gasoline, and paints are located in the custodial closet areas of the school. All of these various cleansers used in cleaning of the windows, floors, and interiors of the buildings are stored on wooden shelves over cement floors, or in placarded metal locked cabinets. All of the "hazardous classified" substances are locked in the custodial closets.

  AEC recommends the continued storage of all chemicals in locked cabinets. Also, in case of fire, and to prevent fire department personnel from inhaling hazardous concentrations of burning chemicals, AEC recommends a more thorough documentation of quantity and location of the maintenance materials.

  If above stated recommendations are completed, AEC then respectfully requests "no further action" site designation.

8.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Advanced Environmental Concepts, Inc. appreciates the opportunity to provide our professional assistance to Ms. Sandee Hackett and the Val Verde Unified School District on this project. If you have any questions regarding our report or if AEC can be of further service, please call us at (661) 831-1646.

Sincerely,

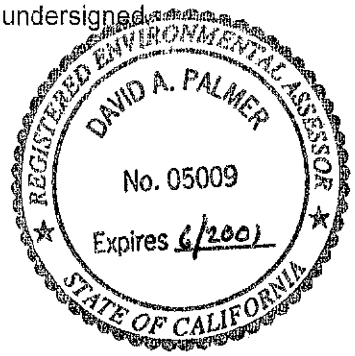

Advanced Environmental Concepts, Inc.

Jonathan L. Buck
Registered Environmental Assessor II #22017

This report has been technically reviewed by the undersigned.

David A. Palmer
Registered Environmental Assessor #5009

DOC11OJ

9.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

AEC staff are composed of three primary environmental professionals who perform Preliminary Site Assessments on a routine basis. Qualifications profiles for each of these individuals are provided in the following sections.

Jonathan L. Buck

Mr. Buck received a Bachelor of Science degree in Geology from the University of California, Santa Barbara, in 1981 and was professionally engaged in the petroleum industry in various capacities through 1985. Mr. Buck joined the environmental industry in 1985 and formed **Advanced Environmental Concepts Inc.** in 1989. Since it's inception, **AEC** has been a full service environmental consulting firm specializing in Preliminary Site Assessments, UST programs, and soil and groundwater assessment and cleanup programs. Mr. Buck is a State of California Registered Environmental Assessor, Class II (#20017) and has performed numerous PSA's on diverse properties throughout California, Arizona, Oregon, and Washington.

Jennifer K. Chesterfield

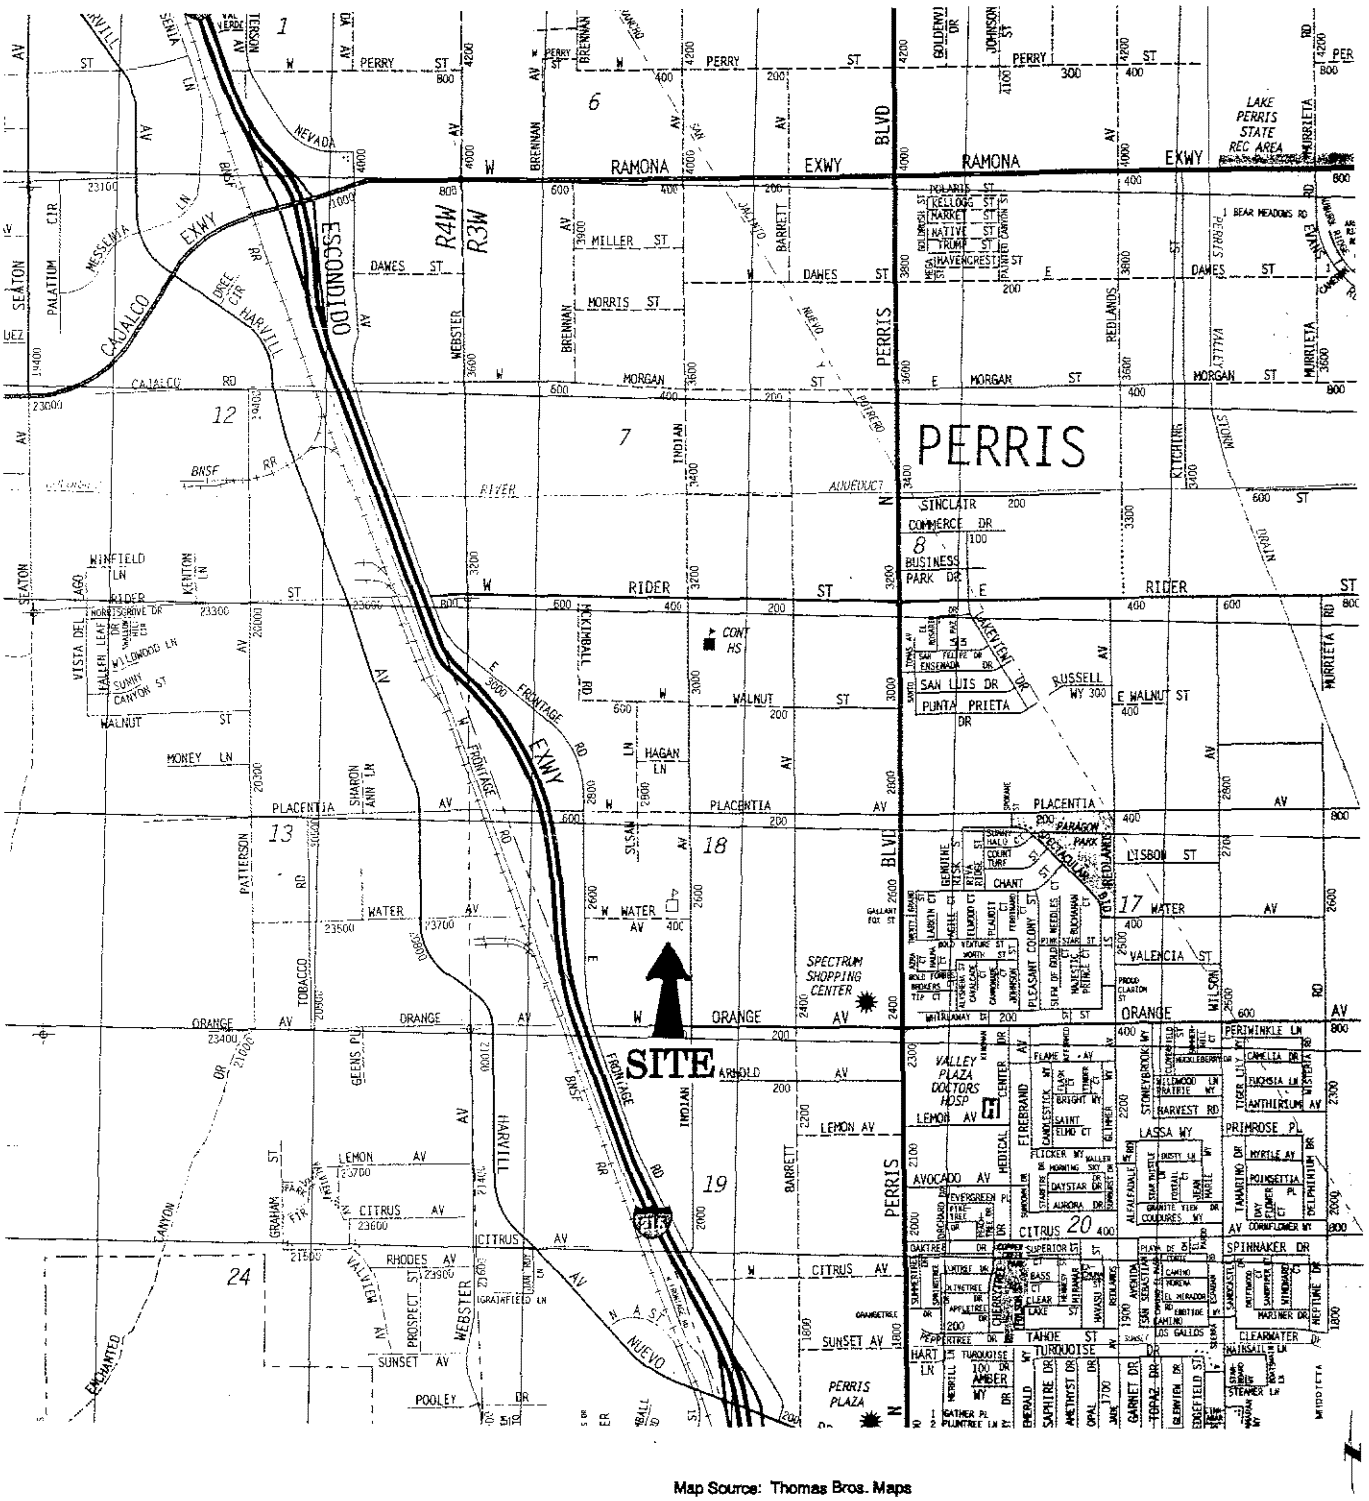

Ms. Chesterfield received a Bachelor of Science in Geoscience and Geology from the State University of New York College at Buffalo in December 1992 and has been professionally employed in the environmental consulting industry performing diverse services including Phase I and Phase II assessments since January 1993. She has conducted in excess of 300 PSA's and has experience in 32 states, including extensive experience in California covering a wide range of properties. Ms. Chesterfield is knowledgeable in State and Federal environmental regulatory law and has a wide range of experience in evaluating Superfund sites, UST, LUST, and RCRIS sites. Ms. Chesterfield is AHERA certified for asbestos inspection, sampling, and abatement procedures and is experienced in soil, groundwater, drinking water, lead, and radon sampling procedures and laboratory analyses interpretation. Ms. Chesterfield has been a Consulting Geologist performing Phase I and Phase II assessments for **AEC** since June 1999.

David A. Palmer

Mr. Palmer received a Bachelor of Arts degree in Geology from the University of Tennessee in 1979 and was professionally engaged in the geophysical industry from 1980 through 1991. Since December, 1991, Mr. Palmer has conducted in excess of 200 PSA's, covering a wide variety of properties located in Arizona, California, Nevada, Oregon, and Washington. Mr. Palmer has conducted PSA's on properties ranging from large acreage agricultural parcels to urban commercial and heavy industrial sites. Mr. Palmer is a State of California Registered Environmental Assessor (#5009) and has been a Project Geologist responsible for PSA's and a variety of other environmental services at **AEC** since 1993.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-97. Search distances are per ASTM standard or custom distances requested by the user.

EDR PROPRIETARY DATABASES

Coal Gas: Former Manufactured gas (Coal Gas) Sites.

SURROUNDING SITES: DATABASES WITH MAPPED SITES

Unmapped (orphan) sites are not considered in the foregoing analysis.

Elevations have been determined from the USGS 1 degree Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. EDR's definition of a site with an elevation equal to the target property includes a tolerance of +/- 10 feet. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property (by more than 10 feet). Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

STATE ASTM STANDARD

CHMIRS: The California Hazardous Material Incident Report System contains information on reported hazardous material incidents, i.e., accidental releases or spills. The source is the California Office of Emergency Services.

A review of the CHMIRS list, as provided by EDR, and dated 12/31/1994 has revealed that there is 1 CHMIRS site within approximately 1 mile of the target property.

Lower Elevation	Address	Dist / Dir	Map ID	Page
Not reported	2545 MAJESTIC PRINCE CO	1/2 - 1 E	3	10

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 01/03/2000 has revealed that there is 1 LUST site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Dist / Dir	Map ID	Page
1X EVANS, AUDREY	*1936 INDIAN ST*	*1/8 - 1/4 NE*	*2*	*9*

STATE OR LOCAL ASTM SUPPLEMENTAL

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, has revealed that there is 1 HAZNET site within approximately 0.25 miles of the target property.

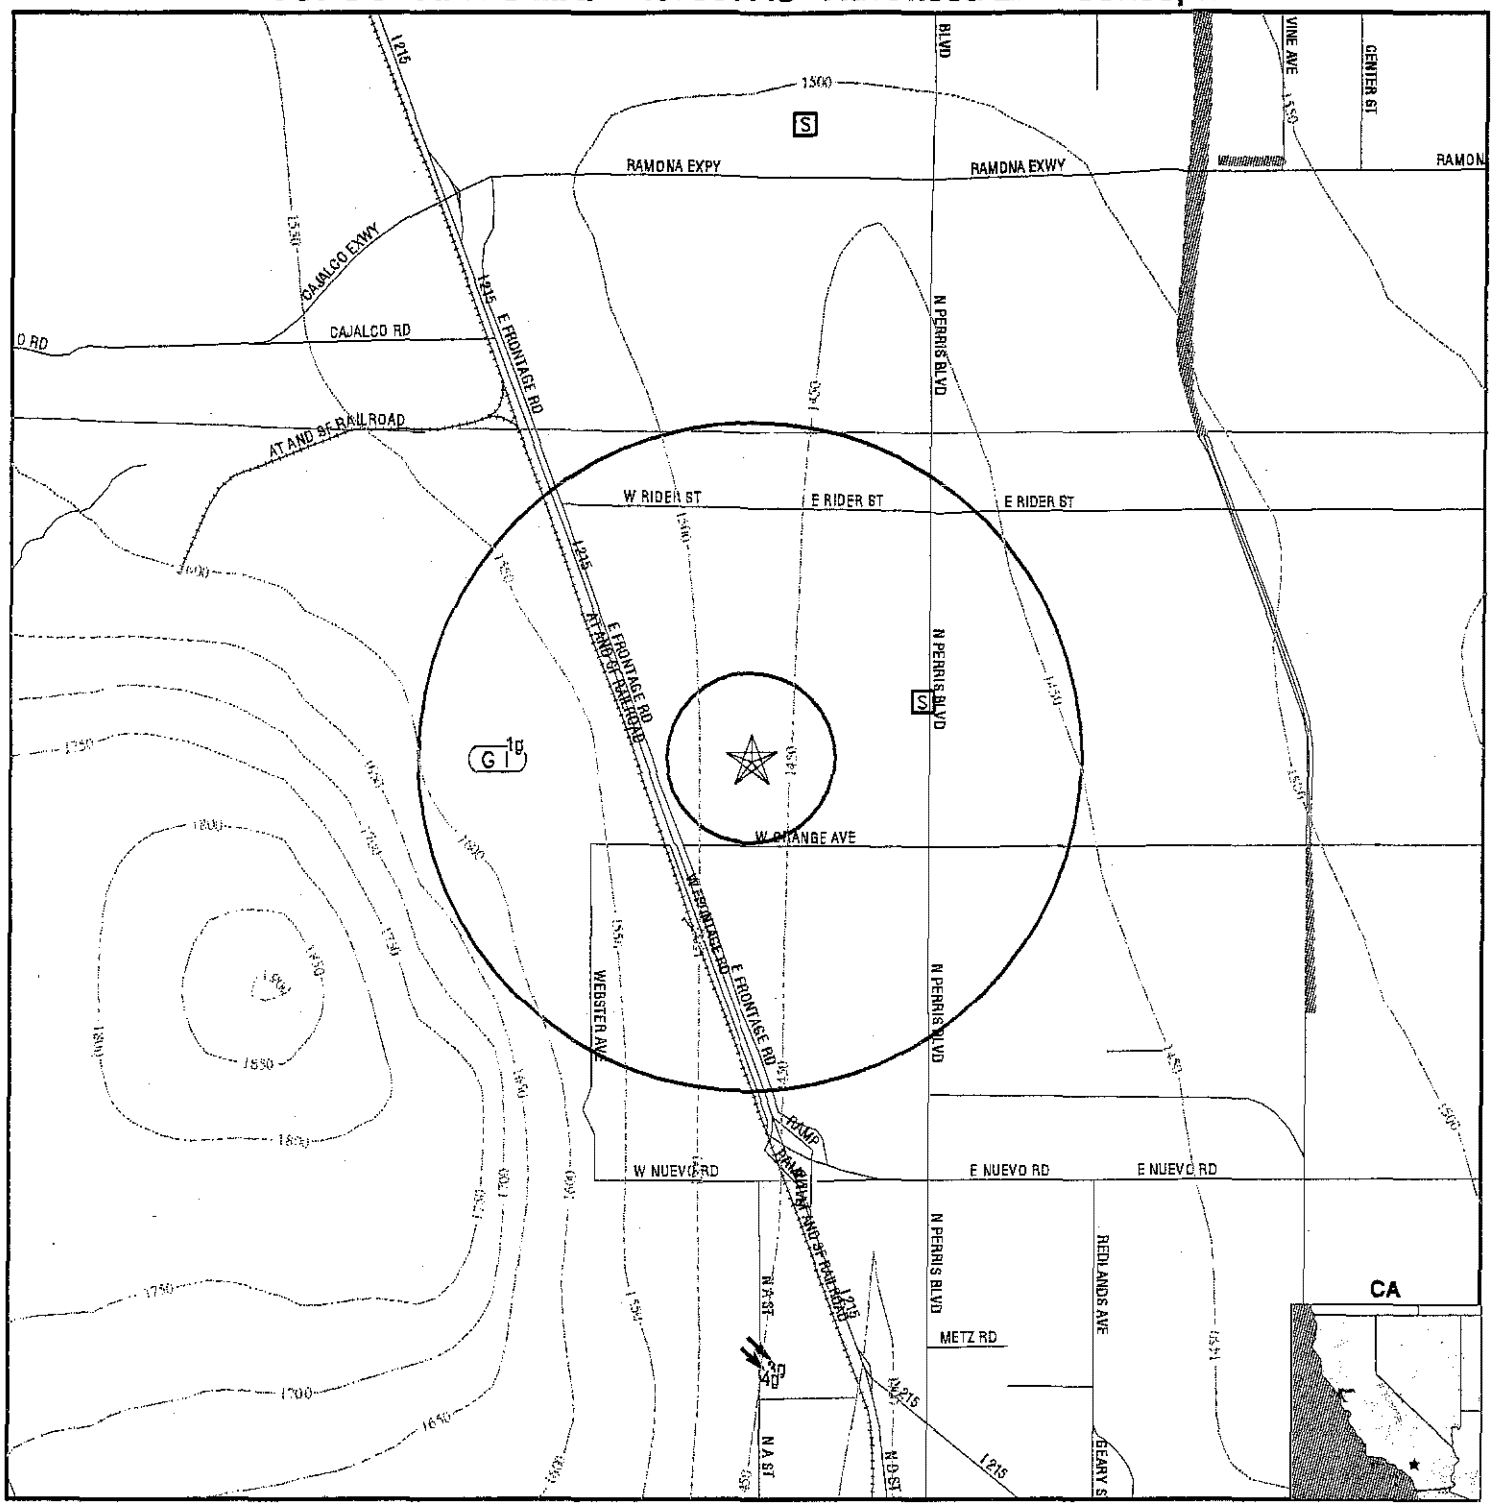

Lower Elevation	Address	Dist / Dir	Map ID	Page
1X EVANS, AUDREY	*1936 INDIAN ST*	*1/8 - 1/4 NE*	*2*	*9*

EXECUTIVE SUMMARY

GROUNDWATER FLOW INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, including well data collected on nearby properties, regional groundwater flow information (from deep aquifers), or surface topography.‡

AQUIFLOW™** Search Radius: 2.000 Miles. The following table shows sites where groundwater flow and depth information was reported. Additional AQUIFLOW™ site information may be available in the GeoCheck® section at the end of this report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List
Source: EPA
Telephone: N/A
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC).

Date of Government Version: 07/22/99
Date Made Active at EDR: 09/10/99
Database Release Frequency: Semi-Annually
Date of Data Arrival at EDR: 08/05/99
Elapsed ASTM days: 36
Date of Last EDR Contact: 11/08/99

DELISTED NPL: NPL Deletions
Source: EPA
Telephone: N/A
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 06/24/99
Date Made Active at EDR: 09/10/99
Database Release Frequency: Semi-Annually
Date of Data Arrival at EDR: 08/10/99
Elapsed ASTM days: 31
Date of Last EDR Contact: 11/08/99

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
Source: EPA
Telephone: 703-413-0223
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 08/26/99
Date Made Active at EDR: 11/11/99
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 08/30/99
Elapsed ASTM days: 73
Date of Last EDR Contact: 11/29/99

CERCLIS-NFRAP: No Further Remedial Action Planned
Source: EPA
Telephone: 703-413-0223
As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

Date of Government Version: 08/26/99
Date Made Active at EDR: 11/11/99
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 08/30/99
Elapsed ASTM days: 73
Date of Last EDR Contact: 11/29/99

CORRACTS: Corrective Action Report
Source: EPA
Telephone: 800-424-9346
CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 09/07/99
Date Made Active at EDR: 10/28/99
Database Release Frequency: Semi-Annually
Date of Data Arrival at EDR: 09/13/99
Elapsed ASTM days: 45
Date of Last EDR Contact: 12/13/99

RCRIS: Resource Conservation and Recovery Information System
Source: EPA/NTIS
Telephone: 800-424-9346
Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Date of Government Version: 09/01/99
Date Made Active at EDR: 11/17/99
Database Release Frequency: Semi-Annually
Date of Data Arrival at EDR: 10/06/99
Elapsed ASTM days: 42
Date of Last EDR Contact: 01/03/00

ERNS: Emergency Response Notification System
Source: EPA/NTIS
Telephone: 202-260-2342
Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 01/06/00
Date Made Active at EDR: 02/08/00
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 01/31/00
Elapsed ASTM days: 8
Date of Last EDR Contact: 11/01/99

FEDERAL ASTM SUPPLEMENTAL RECORDS

BRS: Biennial Reporting System
Source: EPA/NTIS
Telephone: 800-424-9346
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/97
Database Release Frequency: Biennially
Date of Last EDR Contact: 12/20/99
Date of Next Scheduled EDR Contact: 03/20/00

CONSENT: Superfund (CERCLA) Consent Decrees
Source: EPA Regional Offices
Telephone: Varies
Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: Varies
Database Release Frequency: Varies
Date of Last EDR Contact: Varies
Date of Next Scheduled EDR Contact: N/A

ROD: Records Of Decision
Source: NTIS
Telephone: 703-416-0223
Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 01/31/99
Database Release Frequency: Annually
Date of Last EDR Contact: 01/10/00
Date of Next Scheduled EDR Contact: 04/10/00

FINDS: Facility Index System/Facility Identification Initiative Program Summary Report
Source: EPA
Telephone: N/A
Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 10/13/99
Database Release Frequency: Quarterly
Date of Last EDR Contact: 01/12/00
Date of Next Scheduled EDR Contact: 04/10/00

HMIRS: Hazardous Materials Information Reporting System
Source: U.S. Department of Transportation
Telephone: 202-366-4526
Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 06/30/99
Database Release Frequency: Annually
Date of Last EDR Contact: 10/28/99
Date of Next Scheduled EDR Contact: 01/24/00

MLTS: Material Licensing Tracking System
Source: Nuclear Regulatory Commission
Telephone: 301-415-7169
MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 10/29/99
Database Release Frequency: Quarterly
Date of Last EDR Contact: 01/10/00
Date of Next Scheduled EDR Contact: 04/10/00

MINES: Mines Master Index File
Source: Department of Labor, Mine Safety and Health Administration
Telephone: 303-231-5959

Date of Government Version: 08/01/98
Database Release Frequency: Semi-Annually
Date of Last EDR Contact: 01/03/00
Date of Next Scheduled EDR Contact: 04/03/00

NPL LIENS: Federal Superfund Liens
Source: EPA
Telephone: 205-564-4267
Federal Superfund Liens. Under the authority granted the USEPA by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/91
Database Release Frequency: No Update Planned
Date of Last EDR Contact: 11/24/99
Date of Next Scheduled EDR Contact: 02/21/00

PADS: PCB Activity Database System
Source: EPA
Telephone: 202-260-3936
PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 09/22/97
Database Release Frequency: No Update Planned
Date of Last EDR Contact: 11/09/99
Date of Next Scheduled EDR Contact: 02/14/00

RAATS: RCRA Administrative Action Tracking System
Source: EPA
Telephone: 202-564-4104
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/95
Database Release Frequency: No Update Planned
Date of Last EDR Contact: 12/13/99
Date of Next Scheduled EDR Contact: 03/13/00

TRIS: Toxic Chemical Release Inventory System
Source: EPA
Telephone: 202-260-1531
Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/97
Database Release Frequency: Annually

Date of Last EDR Contact: 12/27/99
Date of Next Scheduled EDR Contact: 03/27/00

TSCA: Toxic Substances Control Act
Source: EPA
Telephone: 202-260-1444
Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/94
Database Release Frequency: Every 4 Years

Date of Last EDR Contact: 01/03/00
Date of Next Scheduled EDR Contact: 04/24/00

STATE OF CALIFORNIA ASTM STANDARD RECORDS

CAL-SITES (AWP): Annual Workplan
Source: California Environmental Protection Agency
Telephone: 916-323-3400
Known Hazardous Waste Sites. California DTSC's Annual Workplan (AWP), formerly BEP, identifies known hazardous substance sites targeted for cleanup.

Date of Government Version: 03/02/99
Date Made Active at EDR: 06/29/99
Database Release Frequency: Annually

Date of Data Arrival at EDR: 06/01/99
Elapsed ASTM days: 28
Date of Last EDR Contact: 01/31/00

CAL-SITES (ASPIS): Calsites
Source: Department of Toxic Substance Control
Telephone: 916-323-3400
The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database.

Date of Government Version: 10/01/99
Date Made Active at EDR: 11/23/99
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 11/01/99
Elapsed ASTM days: 22
Date of Last EDR Contact: 12/16/99

CHMIRS: California Hazardous Material Incident Report System
Source: Office of Emergency Services
Telephone: 916-464-3283
California Hazardous Material Incident Reporting System. CHMIRS contains information on reported hazardous material incidents (accidental releases or spills).

Date of Government Version: 12/31/94
Date Made Active at EDR: 04/24/95
Database Release Frequency: No Update Planned

Date of Data Arrival at EDR: 03/13/95
Elapsed ASTM days: 42
Date of Last EDR Contact: 11/30/99

CORTESE: Cortese
Source: CAL EPA/Office of Emergency Information
Telephone: 916-327-1848
The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).

Date of Government Version: 04/01/98
Date Made Active at EDR: 09/23/98
Database Release Frequency: Annually

Date of Data Arrival at EDR: 08/26/98
Elapsed ASTM days: 28
Date of Last EDR Contact: 11/01/99

NOTIFY 65: Proposition 65
Source: State Water Resources Control Board
Telephone: 916-657-0696
Proposition 65 Notification Records. NOTIFY 65 contains facility notifications about any release which could impact drinking water and thereby expose the public to a potential health risk.

Date of Government Version: 10/21/93
Date Made Active at EDR: 11/19/93
Database Release Frequency: No Update Planned
Date of Data Arrival at EDR: 11/01/93
Elapsed ASTM days: 18
Date of Last EDR Contact: 01/24/00

TOXIC PITS: Toxic Pits
Source: State Water Resources Control Board
Telephone: 916-227-4364
Toxic PITS Cleanup Act Sites. TOXIC PITS identifies sites suspected of containing hazardous substances where cleanup has not yet been completed.

Date of Government Version: 07/01/95
Date Made Active at EDR: 09/26/95
Database Release Frequency: No Update Planned
Date of Data Arrival at EDR: 08/30/95
Elapsed ASTM days: 27
Date of Last EDR Contact: 02/07/00

SWF/LF (SWIS): Solid Waste Information System
Source: Integrated Waste Management Board
Telephone: 916-255-4035
Active, Closed and Inactive Landfills. SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 12/20/99
Date Made Active at EDR: 02/01/00
Database Release Frequency: Quarterly

WMUDS/SWAT: Waste Management Unit Database
Source: State Water Resources Control Board
Telephone: 916-227-4448
Waste Management Unit Database System. WMUDS is used by the State Water Resources Control Board staff and the Regional Water Quality Control Boards for program tracking and inventory of waste management units. WMUDS is composed of the following databases: Facility Information, Scheduled Inspections Information, Waste Management Unit Information, SWAT Program Information, SWAT Report Summary Information, SWAT Report Summary Data, Chapter 15 (formerly Subchapter 15) Information, Chapter 15 Monitoring Parameters, TPCA Program Information, RCRA Program Information, Closure Information, and Interested Parties Information.

Date of Government Version: 10/01/99
Date Made Active at EDR: 11/23/99
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 10/26/99
Elapsed ASTM days: 28
Date of Last EDR Contact: 12/13/99

LUST: Leaking Underground Storage Tank Information System
Source: State Water Resources Control Board
Telephone: 916-445-6532
Leaking Underground Storage Tank Incident Reports. LUST records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state.

Date of Government Version: 01/03/00
Date Made Active at EDR: 02/07/00
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 01/10/00
Elapsed ASTM days: 28
Date of Last EDR Contact: 01/10/00

CA UST:

UST: Hazardous Substance Storage Container Database
Source: State Water Resources Control Board
Telephone: 916-227-4408
The Hazardous Substance Storage Container Database is a historical listing of UST sites. Refer to local/county source for current data.

Date of Government Version: 10/15/90
Date Made Active at EDR: 02/12/91
Database Release Frequency: No Update Planned
Date of Data Arrival at EDR: 01/25/91
Elapsed ASTM days: 18
Date of Last EDR Contact: 01/17/00

BEP: Bond Expenditure Plan
Source: Department of Health Services
Telephone: 916-255-2118
Department of Health Services developed a site-specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act funds. It is not updated.

Date of Government Version: 01/01/89
Date Made Active at EDR: 08/02/94
Database Release Frequency: No Update Planned
Date of Data Arrival at EDR: 07/27/94
Elapsed ASTM days: 6
Date of Last EDR Contact: 05/31/94

FID: Facility Inventory Database
Source: California Environmental Protection Agency
Telephone: 916-445-6532
The Facility Inventory Database (FID) contains a historical listing of active and inactive underground storage tank locations from the State Water Resource Control Board. Refer to local/county source for current data.

Date of Government Version: 10/31/94
Date Made Active at EDR: 09/29/95
Database Release Frequency: No Update Planned
Date of Data Arrival at EDR: 09/05/95
Elapsed ASTM days: 24
Date of Last EDR Contact: 12/28/98

HAZNET: Hazardous Waste Information System
Source: California Environmental Protection Agency
Telephone: 916-324-1781
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

HISTORICAL AND OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-260-2805
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-260-2805
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SWDIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

Area Radon Information: The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones: Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Oil/Gas Pipelines/Electrical Transmission Lines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines and electrical transmission lines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

USGS Water Wells: In November 1971 the United States Geological Survey (USGS) implemented a national water resource information tracking system. This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on more than 900,000 wells, springs, and other sources of groundwater.

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in March 1997 from the U.S. Fish and Wildlife Service.

Epicenters: World earthquake epicenters, Richter 5 or greater

UNDERGROUND STORAGE TANK PERMIT FOR CLOSURE

TYPE OF PERMIT

- [x] Removal
- [ ] Abandonment in Place
- [ ] Temporary Closure (12 Months Only)

This permit shall not be construed as to allow the violation of any law, nor does it prevent further corrections of errors found on the application, plans, or at the site. Plans must be resubmitted for approval if any additional changes are made by the applicant.

In addition to this permit, all applicable permits required by the local fire department, building department, and the air quality management district must be obtained and should be available for review at the closure site.

All tank closures must, at a minimum, comply with the California Underground Storage Tank Regulations and the appropriate section of the California Health & Safety Code.

VAL VERDE USD (Owner/Contractor/Applicant) has applied for and is granted a permit to

REMOVAL (Remove/Abandon/Temp. Close) 2 (No.) underground storage tank(s) at

VAL VERDE USD (Facility Name) located at

2656 INDIAN (Street Address) in PERRIS (City/Town), California.

Underground tank closure inspections **must be scheduled five (5) business days in advance.** Telephone (714) 358-5055.

Permit Approved By	Date	Plan Check #
[signature]	Sept 1st 93	93-283

*This Permit for Closure is VALID FOR 90 DAYS from the date of approval. If no reasonable action is taken within that period, the applicant will be required to reapply for a closure permit with all pertinent fees associated.

1.0 INTRODUCTION

Ms. Sandee Hackett , Val Verde Unified School District, has authorized **Advanced Environmental Concepts, Inc**. (AEC) to prepare this workplan to describe methods and procedures to be implemented in the excavation and remediation of potential gasoline impacted soil proximal to the former gasoline dispenser (and underground storage tanks) located at the former Transportation Yard, 2656 Indian Avenue, Perris, California (**Appendix A, Figure 1**). The agency contact for this project is Ms. Sharon Boltinghouse, Hazardous Materials Specialist with the Riverside County Environmental Health Department (County). Specific location of the proposed excavation is shown on the appended site map (**Appendix A, Figure 2**).

2.0 BACKGROUND

2.1 UST History & Construction

The Val Verde School District installed two underground fuel storage tanks (USTs) and associated dispensers in the early 1970s. The USTs had capacities of approximately 1,000 gallons each and contained diesel and gasoline. The dispenser island consisted of a raised concrete platform, approximately 3 feet by 5 feet, and was positioned in the center of a concrete drive slab having dimensions of 25 feet by 25 feet. The USTs were aligned end to end trending north-south, and the piping run was approximately 30 feet in length from the ends of the two USTs east towards the dispensers. It appears that the vent lines were also run out to the island.

The USTs were removed on September 16, 1993 by Elmer Wood, Inc., an approved UST removal contractor The removal was properly permitted with the County, and identified by Plan Check #93-283. Mr. Paul "Mitch" Mitchell, County Hazardous Materials Specialist, supervised the removal process, and subsequent soil sampling. Mr. Mitchell's Underground Storage Tank Closure Inspection Report indicated that the USTs appeared to be non-contaminated, however, the piping trench was slightly contaminated. Soil samples were collected at 2' and 6' below the fill end of the diesel UST, and at 2' and 4.5' below the fill/product line end of the gasoline UST. No samples were collected along the piping run, or beneath the dispenser. Mr. Mitchell's report also stated that "soil contamination discovered in pipe trench. Removed during UST removal process." It could not be determined whether the contaminated soil was actually removed.

The analytical results were performed by E.S. Babcock & Sons. The gasoline tank, identified as "North Tank South End @ 2'" exhibited non-detectable (ND) concentrations for TPH-gasoline, and ND for benzene, ND for ethylbenzene, 11 ppb for toluene, and 7.3 ppb for total xylenes. The sample "North Tank South End @ 6'" exhibited ND for TPH-gasoline, ND for benzene, ND for ethyl benzene, ND for total xylenes, and 6.5 ppb for toluene.

The first diesel UST sample was misiabeled as "North Tank South End @ 2'" (should read South Tank South End @ 2'). The result indicated 18 ppm of TPH as diesel. The deeper diesel UST sample identified as "South Tank South End @ 6'" exhibited 19 ppm of TPH as diesel. Note also that Mr. Mitchell indicated that the diesel soil samples were collected at 2' and 4.5' below tank invert, and yet the analytical results describe samples collected at 2' and 6' below tank invert.

Since this is an active school site currently slated for renovation, and under stringent environmental review by the Department of Toxic Substances Control (DTSC), School Unit, AEC recommended re-excavation, and sampling of the former UST and dispenser locations. On June 28, 2000 an AEC Senior Geologist supervised the re-excavation, and re-sampling of the tank pit and dispenser areas.

4400 ASHE ROAD #206 • BAKERSFIELD, CA 93313 661/831-1646 • FAX 661/831-1771

A CAT 416C backhoe was used to excavate exploratory trenches to approximate depths of 9 feet bgs through the former location of the UST graves. The soil exhibited no photoionization detector (PID) concentrations, nor was there visual, or olfactory evidence of hydrocarbon releases. Subsequently, the soil was removed from the former location of the piping trench. The exploratory excavation trended from the tank pit, to the east and center of the former dispenser location (approximately a 30 foot run). The soil was removed to a depth of 7 feet bgs, and again no PID readings, olfactory, or visual identification of hydrocarbons were identified to the western edge of the concrete drive slab (approximately 18 feet from the tank pit). Since the concrete drive slab appeared to have never been saw cut to remove the piping run, AEC sawcut the drive slab to the former dispenser location and began exploratory excavation. As AEC advanced the excavation towards the former dispenser location, visual staining and strong gasoline odors were identified. Also, the PID readings exceeded 2,000 ppm. At the former dispenser location a large leach line (crushed rock and clay pipe) was encountered. This leach line ran north-south and was directly beneath the former dispenser location at a depth of 7 feet bgs. The gasoline odor was very strong at this location. Once the leach line was encountered, AEC terminated the excavation, and backfilled the trenches with the intent to return with an excavator to remove the gasoline impacted soil.

Four soil samples were collected during this exploratory trenching. ST @ 8' was collected from the center of the south tank at 8 feet bgs, NT @ 8' was collected from 8 feet bgs from the former location of the northern UST; PL @ 6' was collected from 6 feet bgs along the product line run prior to the concrete drive slab; and SP was collected from the spoils removed from beneath the drive slab. The tank and product line samples all exhibited non-detectable TPH-gasoline, BTXE, and MTBE concentrations, however, the SP sample exhibited 2,900 ppm TPH-gasoline, 0.43 ppm benzene, 5.1 ppm toluene, 11 ppm ethyl benzene, 150 ppm total xylene, and ND for MTBE.

Following is AECs work plan to delineate the plume boundaries and dispose of the gasoline impacted soil.

3.0 PHYSICAL CHARACTERISTICS

3.1 Site Geology and Depth to Groundwater

The Val Verde Elementary School lies in the central portion of the Perris Plain, within the Santa Ana basin, which covers an area of approximately 2,000 square miles and is part of the Peninsular Ranges Province. Other major features in the area are the Pacific Coastal Plain to the west, the Transverse Ranges (including the San Bernardino and San Gabriel Mountains) and the Mojave Desert to the north, and the San Jacinto Mountains and Colorado Desert to the east.

The Perris Plain is a semi-arid, north-south trending alluvial valley bounded by low-lying granitic bedrock on the west and a series of tributary valleys and granitic mountains to the east. The valley floor has a gentle slope of approximately 20 feet per mile in a south-southeasterly direction. Ground surface elevations range from 1,400 to 1800 feet above mean sea level.

The Perris Plain is a broad, nearly flat plain where alluvium is found at the surface. The numerous bedrock hills that interrupt this flat surface are described as erosional remnants of the underlying crystalline basement rocks. The surface of low relief was developed on the crystalline basement material and drainage was typically to the east along the San Jacinto River. Development of this channelized surface was followed by periods of sedimentation. Drainage shifted toward the west and deposition of recent alluvium buried the Perris Surface, forming the relatively flat Perris Plain.

4400 ASHE ROAD #206 • BAKERSFIELD, CA 93313 661/831-1646 • FAX 661/831-1771

The Perris Plain alluvial deposits are composed of alternating layers of varying amounts of gravel, sand, silt, and clay. Thickness of the alluvium varies between a few feet to over 800 feet.

Groundwater in the Perris Valley is found in the coarse-grained alluvial deposits. These deposits are highly permeable and capable of yielding large quantities of water under unconfined conditions. The groundwater system in the Perris and More no valleys is almost completely surrounded by non water-bearing rocks such that the amount of water flowing into, or out of the basin is considered negligible. Natural recharge to the aquifer results primarily from infiltration and precipitation. Artificial recharge occurs near the housing area and Heacock Storm Drain which cause localized groundwater highs which locally affect the groundwater flow direction. Regional groundwater flow generally mimics the topographic gradient, which is to the south-southeast. First unconfined groundwater is generally identified between 50 to 75 feet below ground surface (bgs), however, "perched" water may be found in the valley floor at depths ranging from 10 to 50 feet bgs. Depth to water beneath the Val Verde Elementary School is estimated at 60 feet bgs.

The elementary school site lies between two major fault zones: the Elsinore-Whittier, 13 miles to the southwest; and the San Jacinto, 7 miles to the northeast. The area between the two faults is known as the Perris Block, or Perris Plain. These northwest trending fault zones are considered active faults by the California Division of Mines and Geology. Movement along these fault zones is predominately right lateral strike-slip. The area is classified in Seismic Hazard Zone IV and is characterized by areas likely to sustain major damage from earthquakes.

Two major soil associations are present in the area: the Cieneba-Rocky Fallbrook association, and the Monserate-Arlington-Exeter association. The Cieneba-Rocky Fallbrook association is derived from granitic rock, are typically 1 to 3 feet in thickness, have a surface layer of sandy loam to fine sandy loam, are well-drained, and have slopes ranging from 2 to 50 percent. These soils occur on undulating to steep terrain, such as granitic rock uplands and low mountains. The Monserate-Arlington-Exeter association is derived from granitic alluvium, have a surface layer of sandy loam to fine sandy loam, are well drained, and are gently sloping.

4.0 WORK PLAN

4.1 Excavation Methods

A track mounted excavator equipped with a four-foot bucket will be used to excavate the impacted soil to a maximum depth of approximately 35 feet BGL. AEC estimates that impacted soil surrounding the dispenser can be adequately removed by excavating an estimated total of 500 tons, or a hole having approximate dimensions of 20' x 20' x 35' feet deep.

All soil removed from the former dispenser area will be monitored for hydrocarbons and volatile organic compounds (VOC's) during the excavation operation to ensure proper segregation of impacted soil from clean soil. Soil monitoring will be conducted at the excavation using a MicroTIP$_{TM}$2020 Photoionization Detector (PID), manufactured by Photovac, Inc. Actual excavation depths will be determined in the field based on continuous PID monitoring and consultation with the County representative.

4.2 Excavation Boring Backfill and Compaction

Upon completion of adequate removal of the gasoline impacted soil, the excavation will be backfilled with crushed rock to approximately 10 feet bgs followed by clean import soil to surface grade and mechanically compacted to a minimum of 90% compaction.

4.3 Soil Disposal

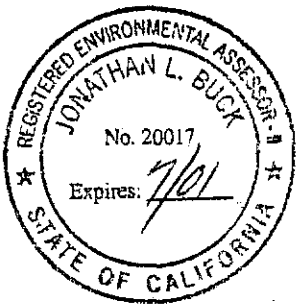

All excavated hydrocarbon impacted soil will be stockpiled on-site, then loaded into semi end dump trucks. The stockpiled soil will be sampled, and the analytical profiling results submitted to American Remedial Technology (ART) in Lynwood, California. Upon ARTs acceptance approval, the soil will be loaded in the end dumps and transported to ART for recycling, under non-hazardous waste manifests.

5.0 CLOSING

This work plan represents AEC's professional opinions based on currently available data and arrived at in accordance with accepted hydrogeologic and environmental engineering practices. No other warranty, expressed or implied, is given.

Health & Safety Plan

for

Val Verde Elementary School
2656 Indian Avenue
County of Riverside • Perris, California

Introduction:

A Site Safety Plan (SSP) has been designed to address safety provisions needed during the site soil assessment/remediation. It's purpose is to provide established procedures to protect all on-site personnel from direct skin contact, inhalation, or ingestion of potentially hazardous materials that may be encountered at the site. The SSP establishes personnel responsibilities, personal protective equipment standards, decontamination procedures and emergency action plans.

Advanced Environmental Concepts, Inc. seeks to enter the property described above for the purpose of conducting a site remediation and assessment, consisting of soil excavation using a track-mounted excavator to remove potential petroleum hydrocarbon impacted soil.

Soil samples will be collected during the boring operations. All possible efforts will be made to collect undisturbed samples. All samples to be chemically analyzed will be collected in brass sampling sleeves, capped with teflon and plastic end caps, sealed with tape, and placed on ice in a cooler immediately. All Chain-of-Custody protocol will be followed.

Excavation equipment will be brought to the site and operated by:

AEC, Inc
4400 Ashe Road, Suite 206
Bakersfield, California 93313
(661) 831-1646
CSL A#720492, Haz

This SSP describes means for protecting all on-site personnel from deleterious contamination of personal injury while conducting on-site activities. As described below, we will strive to meet all requirements promulgated by the California Department of Health Services.

Responsibilities of Key Personnel:

All personnel on-site will have assigned responsibilities. Mr. Jonathan Buck will serve as Project Manager and on-site Engineer. He will also serve as Site Safety Officer (SSO). As SSO, Mr. Buck will assure that on-site personnel have received a copy of the SSP. Personnel will be required to document their full understanding of the SSP before admission to the site. Compliance with the SSP will be monitored at all times by the SSO. Appropriate personal protective equipment, listed below, will be available and utilized by all on-site personnel. Prior to beginning work, the SSO will conduct a training session to assure that all are aware of safe work

practices. In the training session, personnel will be made aware of hazards at the site and will utilize Material Safety Data Sheets for information on compounds to be encountered.

Mr. Buck will also be responsible for keeping field notes, collecting and securing samples, and assuring sample integrity by adherence to Chain-of-Custody protocol.

All on-site employees will take reasonable precautions to avoid unforeseen hazards. After documenting their understanding of the SSP, each on-site employee will be responsible for strict adherence to all points contained herein. Any deviation observed will be reported to the SSO and corrected. On-site employees are held responsible to perform only those tasks for which they believe they are qualified. Provisions of this SSP are mandatory and personnel associated with on-site activities will adhere strictly hereto.

Job Hazard Analyses:

Hazards likely to be encountered on-site include those commonly encountered when operating any mechanical equipment, such as the danger of falling objects or moving machinery. Simple precautions will reduce or eliminate risks associated with operating such equipment.

Barney's Hole Digging Service, Inc. will deliver and operate all excavating equipment. Qualified personnel only will have any contact with this equipment. All on-site personnel, including the excavation contractor and his employees, are required to wear hard hats when in close proximity to excavating equipment. Latex sampling gloves will be worn by persons collecting or handling samples to prevent exposure to contaminants. Gloves will be changed between samples and used ones discarded, to avoid cross-contamination. Proper respiratory equipment will be worn if vapor contamination levels on-site exceed action levels as determined using a Photoionization Detector (PID). Action levels requiring respiratory apparatus will be 5-ppm, in the breathing space. Furthermore, no on-site smoking, open flame or sparks will be permitted in order to prevent accidental ignition.

Risk Assessment Summary:

Exposure to chemicals anticipated on-site include gasoline, diesel, and benzene, toluene, ethylbenzene, and xylene (BTEX). These chemicals represent a hazard because they are moderately to extremely toxic and most are highly flammable.

Threshold Limit Values (TLV's), Short Term Exposure Limits (STEL's) and Toxicity levels (LD50, oral-rat), all in mg/kg (ppm), are listed below:

Compound	TLV	STEL	Toxicity
Gasoline	200	300	----
Diesel	50	75	----
Benzene	10	25	4894
Toluene	100	150	5000
Xylene	100	150	4300

Benzene is considered an extreme cancer hazard. Applicable MSDS forms are attached.

Exposure Monitoring Plan:

Air monitoring will be conducted during excavation procedures using a TIP$_{TM}$II Photoionization Detector (PID) equipped with a 10.6eV lamp, manufactured by Photovac, Inc. The PID will be calibrated to 50 ppm hexane. Volatile emissions are not anticipated but will nevertheless be monitored.

Personal Protective Equipment:

When handling samples, the on-site Geologist will wear latex gloves. Hard hats will be worn by all personnel on-site when in proximity of excavation equipment.

Work Zones and Security Measures:

Access to the site will be restricted to authorized personnel. A set of cones, placards or wide yellow tape, surrounding the site, will define the perimeter, if needed. The Project Manager will be responsible for site security.

Decontamination Measures:

Avoidance of contamination whenever possible is the best method for protection. Common sense dictates that on-site personnel avoid sitting, leaning or placing equipment on possible contaminated soil. All personnel will be advised to wash their hands, neck and face with soap and water before taking a break or leaving the site.

Excavation, boring, and sampling equipment used will be decontaminated by steam-cleaning. Sampling equipment will be decontaminated before each sample collection.

General Safe Work Practices:

On-site personnel will be briefed each day in "tailgate" meetings as to the day's goals and equipment to be used. Anticipated contaminants and emergency procedures will be reviewed. Appropriate personal protective equipment will be put on and verified correct by SSO, including respirator fit.

Excavation, boring, and sampling equipment will be steam-cleaned before being brought on-site. The on-site Geologist will oversee operations and log the excavation strata. The Sample Coordinator will assure that proper protocol is used at all times in collecting and handling samples.

Training Requirements:

The SSO will conduct a pre-site training session which will include all points of MSDS forms, contaminant properties, warning signs, health hazard data, risk from exposure and emergency first aid.

All chemicals are to be covered and the SSO will assure that everyone fully understands site hazards.

Medical Surveillance Program:

According to CFR 29, 1910.120, Paragraph (f), employees who wear respirators thirty (30) days or more during one (1) year or who have been exposed to hazardous substances or health hazards above established permissible exposure limits are required to be monitored medically. All site personnel will be required to have had a complete chemical physical within the past year.

Record Keeping:

Documentation will be kept on personnel exposed to contaminant hazards on the job site according to OSHA regulations. These will include documentation that employees have received training on the SSP, respiratory protection, MSDS forms and all emergency procedures. These will be reviewed during the pre-site training meeting.

Exposure records on each job will be kept for thirty (30) years to meet requirements. Included will be names and social security numbers of employees, medical evaluations, on-the-job logs from entry to exit, first aid administered, visits on-site by outside persons and personal air monitoring records.

Contingency Plans:

In the event of an accident, injury, or other emergency, the Project Director, Senior Project Manager, or other person, will notify the appropriate government agencies or individuals as follows:

1.0 INTRODUCTION

This report presents the results of a soil excavation remediation project conducted by **Advanced Environmental Concepts, Inc**. (AEC) to remove hydrocarbon-impacted soil resulting from the unauthorized discharge of gasoline beneath the former dispenser island associated with the underground gasoline and diesel storage tanks (USTs) formerly located at the site. Soil contaminated with gasoline was detected following the excavation and removal of the USTs in September, 1993. The steel tanks were formerly located in the Transportation Yard of the Val Verde Elementary School, 2656 Indian Avenue, Perris, California (**Appendix A, Figure 1**).

All environmental services conducted on-site were in accordance with the recommendations previously prepared by AEC and submitted to the Riverside County Environmental Health Department, (County) Hazardous Materials Division . This excavation remediation project was authorized by the Val Verde School District (Ms. Sandee Hackett) and soil sampling was conducted under the supervision of Mr. Paul "Mitch" Mitchell, Hazardous Materials Specialist, Riverside County.

This report contains background information regarding existing site characteristics, regional and local hydrogeological profiles, and the project history. Also included in the following sections are the objectives and scope of investigation, detailed investigative procedures, and subsequent findings. Finally, AEC provides an evaluation of said findings and makes related conclusions and recommendations. The report appendices contain project maps and figures (**Appendix A**), compaction report (**Appendix B**), and chain-of-custody documentation/analytical reports (**Appendix C**).

2.0 BACKGROUND

2.1 UST History & Construction

The Val Verde School District installed two underground fuel storage tanks (USTs) and associated dispensers in the early 1970s. The USTs had capacities of approximately 1,000 gallons each and contained diesel and gasoline. The dispenser island consisted of a raised concrete platform, approximately 3 feet by 5 feet, and was positioned in the center of a concrete drive slab having dimensions of 25 feet by 25 feet. The USTs were aligned end to end trending north-south, and the piping run was approximately 30 feet in length from the ends of the two USTs east towards the dispensers. It appears that the vent lines were also run out to the island.

The USTs were removed on September 16, 1993 by Elmer Wood, Inc., an approved UST removal contractor. The removal was properly permitted with the County, and identified by Plan Check #93-283. Mr. Paul "Mitch" Mitchell, County Hazardous Materials Specialist, supervised the removal process, and subsequent soil sampling. Mr. Mitchell's Underground Storage Tank Closure Inspection Report indicated that the USTs appeared to be non-contaminated, however, the piping trench was slightly contaminated. Soil samples were collected at 2' and 6' below the fill end of the diesel UST, and at 2' and 4.5' below the fill/product line end of the gasoline UST. No samples were collected along the piping run, or beneath the dispenser. Mr. Mitchell's report also stated that "soil contamination discovered in pipe trench. Removed during UST removal process." It could not be determined whether the contaminated soil was actually removed.

The analytical results were performed by E.S. Babcock & Sons. The gasoline tank, identified as "North Tank South End @ 2'" exhibited non-detectable (ND) concentrations for TPH-gasoline, and

4400 ASHE ROAD #206 • BAKERSFIELD, CA 93313 661/831-1646 • FAX 661/831-1771

ND for benzene, ND for ethylbenzene, 11 ppb for toluene, and 7.3 ppb for total xylenes. The sample "North Tank South End @ 6'" exhibited ND for TPH-gasoline, ND for benzene, ND for ethyl benzene, ND for total xylenes, and 6.5 ppb for toluene.

The first diesel UST sample was mislabeled as "North Tank South End @ 2'" (should read South Tank South End @ 2'). The result indicated 18 ppm of TPH as diesel. The deeper diesel UST sample identified as "South Tank South End @ 6'" exhibited 19 ppm of TPH as diesel. Note also that Mr. Mitchell indicated that the diesel soil samples were collected at 2' and 4.5' below tank invert, and yet the analytical results describe samples collected at 2' and 6' below tank invert.

Since this is an active school site currently slated for renovation, and under stringent environmental review by the Department of Toxic Substances Control (DTSC), School Unit, AEC recommended re-excavation, and sampling of the former UST and dispenser locations. On June 28, 2000 an AEC Senior Geologist supervised the re-excavation, and re-sampling of the tank pit and dispenser areas. A CAT 416C backhoe was used to excavate exploratory trenches to approximate depths of 9 feet bgs through the former location of the UST graves. The soil exhibited no photoionization detector (PID) concentrations, nor was there visual, or olfactory evidence of hydrocarbon releases. Subsequently, the soil was removed from the former location of the piping trench. The exploratory excavation trended from the tank pit, to the east and center of the former dispenser location (approximately a 30 foot run). The soil was removed to a depth of 7 feet bgs, and again no PID readings, olfactory, or visual identification of hydrocarbons were identified to the western edge of the concrete drive slab (approximately 18 feet from the tank pit). Since the concrete drive slab appeared to have never been saw cut to remove the piping run, AEC sawcut the drive slab to the former dispenser location and began exploratory excavation. As AEC advanced the excavation towards the former dispenser location, visual staining and strong gasoline odors were identified. Also, the PID readings exceeded 2,000 ppm. At the former dispenser location a large leach line (crushed rock and clay pipe) was encountered. This leach line ran north-south and was directly beneath the former dispenser location at a depth of 7 feet bgs. The gasoline odor was very strong at this location. Once the leach line was encountered, AEC terminated the excavation, and backfilled the trenches with the intent to return with an excavator to remove the gasoline impacted soil.

Four soil samples were collected during this exploratory trenching. ST @ 8' was collected from the center of the south tank at 8 feet bgs, NT @ 8' was collected from 8 feet bgs from the former location of the northern UST; PL @ 6' was collected from 6 feet bgs along the product line run prior to the concrete drive slab; and SP was collected from the spoils removed form beneath the drive slab. The tank and product line samples all exhibited non-detectable TPH-gasoline, BTXE, and MTBE concentrations, however, the SP sample exhibited 2,900 ppm TPH-gasoline, 0.43 ppm benzene, 5.1 ppm toluene, 11 ppm ethyl benzene, 150 ppm total xylene, and ND for MTBE.

3.0 PHYSICAL CHARACTERISTICS

3.1 Site Geology and Depth to Groundwater

The Val Verde Elementary School lies in the central portion of the Perris Plain, within the Santa Ana basin, which covers an area of approximately 2,000 square miles and is part of the Peninsular Ranges Province. Other major features in the area are the Pacific Coastal Plain to the west, the Transverse Ranges (including the San Bernardino and San Gabriel Mountains) and the Mojave Desert to the north, and the San Jacinto Mountains and Colorado Desert to the east.

4400 ASHE ROAD #206 • BAKERSFIELD, CA 93313 661/831-1646 • FAX 661/831-1771

The Perris Plain is a semi-arid, north-south trending alluvial valley bounded by low-lying granitic bedrock on the west and a series of tributary valleys and granitic mountains to the east. The valley floor has a gentle slope of approximately 20 feet per mile in a south-southeasterly direction. Ground surface elevations range from 1,400 to 1800 feet above mean sea level.

The Perris Plain is a broad, nearly flat plain where alluvium is found at the surface. The numerous bedrock hills that interrupt this flat surface are described as erosional remnants of the underlying crystalline basement rocks. The surface of low relief was developed on the crystalline basement material and drainage was typically to the east along the San Jacinto River. Development of this channelized surface was followed by periods of sedimentation. Drainage shifted toward the west and deposition of recent alluvium buried the Perris Surface, forming the relatively flat Perris Plain.

The Perris Plain alluvial deposits are composed of alternating layers of varying amounts of gravel, sand, silt, and clay. Thickness of the alluvium varies between a few feet to over 800 feet.

Groundwater in the Perris Valley is found in the coarse-grained alluvial deposits. These deposits are highly permeable and capable of yielding large quantities of water under unconfined conditions. The groundwater system in the Perris and Moreno valleys is almost completely surrounded by non water-bearing rocks such that the amount of water flowing into, or out of the basin is considered negligible. Natural recharge to the aquifer results primarily from infiltration and precipitation. Artificial recharge occurs near the housing area and Heacock Storm Drain which cause localized groundwater highs which locally affect the groundwater flow direction. Regional groundwater flow generally mimics the topographic gradient, which is to the south-southeast. First unconfined groundwater is generally identified between 50 to 75 feet below ground surface (bgs), however, "perched" water may be found in the valley floor at depths ranging from 10 to 50 feet bgs. Depth to water beneath the Val Verde Elementary School is estimated at 60 feet bgs.

The elementary school site lies between two major fault zones: the Elsinore-Whittier, 13 miles to the southwest; and the San Jacinto, 7 miles to the northeast. The area between the two faults is known as the Perris Block, or Perris Plain. These northwest trending fault zones are considered active faults by the California Division of Mines and Geology. Movement along these fault zones is predominately right lateral strike-slip. The area is classified in Seismic Hazard Zone IV and is characterized by areas likely to sustain major damage from earthquakes.

Two major soil associations are present in the area: the Cieneba-Rocky Fallbrook association, and the Monserate-Arlington-Exeter association. The Cieneba-Rocky Fallbrook association is derived from granitic rock, are typically 1 to 3 feet in thickness, have a surface layer of sandy loam to fine sandy loam, are well-drained, and have slopes ranging from 2 to 50 percent. These soils occur on undulating to steep terrain, such as granitic rock uplands and low mountains. The Monserate-Arlington-Exeter association is derived from granitic alluvium, have a surface layer of sandy loam to fine sandy loam, are well drained, and are gently sloping.

4.0 SOIL EXCAVATION PROCEDURES

Initially, the excavation was enlarged using a Hitachi EX 200 excavator, however, the maximum reach of the Hitachi is only 18 feet bgs. Therefore, a CAT 229, equipped with a long stick, was brought in to complete the excavation to 31 feet bgs. The contaminated soil from the former dispenser area was excavated and loaded into trucks for transport and disposal at American Remedial Technology's facility in Lynwood, California. The soil was recycled using a rotary kiln, therefore, eliminating the land filling option. The excavation extended to a total depth of 31 feet BGL and approximately 566 yd^3 of gasoline-impacted soil were excavated from the

former dispenser location, under the direction of an AEC senior geologist. The final excavation was approximately 30 feet long, 30 feet wide, and 31 feet deep. Confirmatory soil samples were collected from the sidewalls and floor of the excavation (**Appendix A, Figure 2**). The following sample collection protocol was observed for all samples collected:

1) The excavator operator was instructed to retrieve a bucket of native soil from the appointed sampling locations;

2) A qualified AEC representative pushed a brass sleeve into an undisturbed portion of the soil, leaving no head space in the sleeve;

3) The sleeve was capped with a Teflon lined lid, sealed with tape, labeled, and stored in a cooler chilled with frozen Blue Ice;

4) The soil samples were recorded on a chain-of-custody document to ensure sample integrity and traceability;

5) Soil samples were analyzed by Baseline Laboratories, Inc., a State-certified laboratory located in Huntington Beach, California.

Following the completion of the remedial excavation and sampling procedures, the 31 foot deep cavity was backfilled with clean "import" crushed rock and sand, and clean overburden soil segregated from the excavation. Certified compaction was achieved using a compaction wheel mounted on the end of the excavator. The compaction was certified by the geotechnical engineering firm of Hu and Associates (**Appendix B**).

5.0 ANALYTICAL RESULTS

Soil sample analyses from the excavation were performed by Baseline Laboratories, Inc., a California-certified laboratory in Huntington Beach, to determine the presence and concentration levels of total petroleum hydrocarbons as gasoline (TPH-g) and volatile aromatics (BTXE) by CA DHS and EPA method 8020. The results of these laboratory analyses are tabulated below in **Table 1**. Laboratory reports and Chain-of-Custody documents are presented in **Appendix C**. Units are in milligrams per kilogram (mg/kg), which are equivalent to parts per million (ppm).

TPH-g: Total Petroleum Hydrocarbons as Gasoline

Other soil samples were collected for analysis during this investigation, however, because they were not collected under the direct supervision of the County, they are only used for screening purposes only. Based on field observations and the results of laboratory analyses, all accessible petroleum impacted soil beneath the former dispenser have been excavated, removed, and replaced with clean import fill material.

6.0 CONCLUSIONS

Based on the information presented in this evaluation, AEC presents the following conclusions:

- An unauthorized release of gasoline from the former dispenser occurred at the Val Verde Elementary School.
- The vertical and lateral migration of the gasoline release was increased because of the hydrostatic action of the effluent wastewater emanating from the two leach lines located beneath and adjacent to the dispenser.
- There is approximately 30 feet of unimpacted soil between the bottom of the excavation and first groundwater.

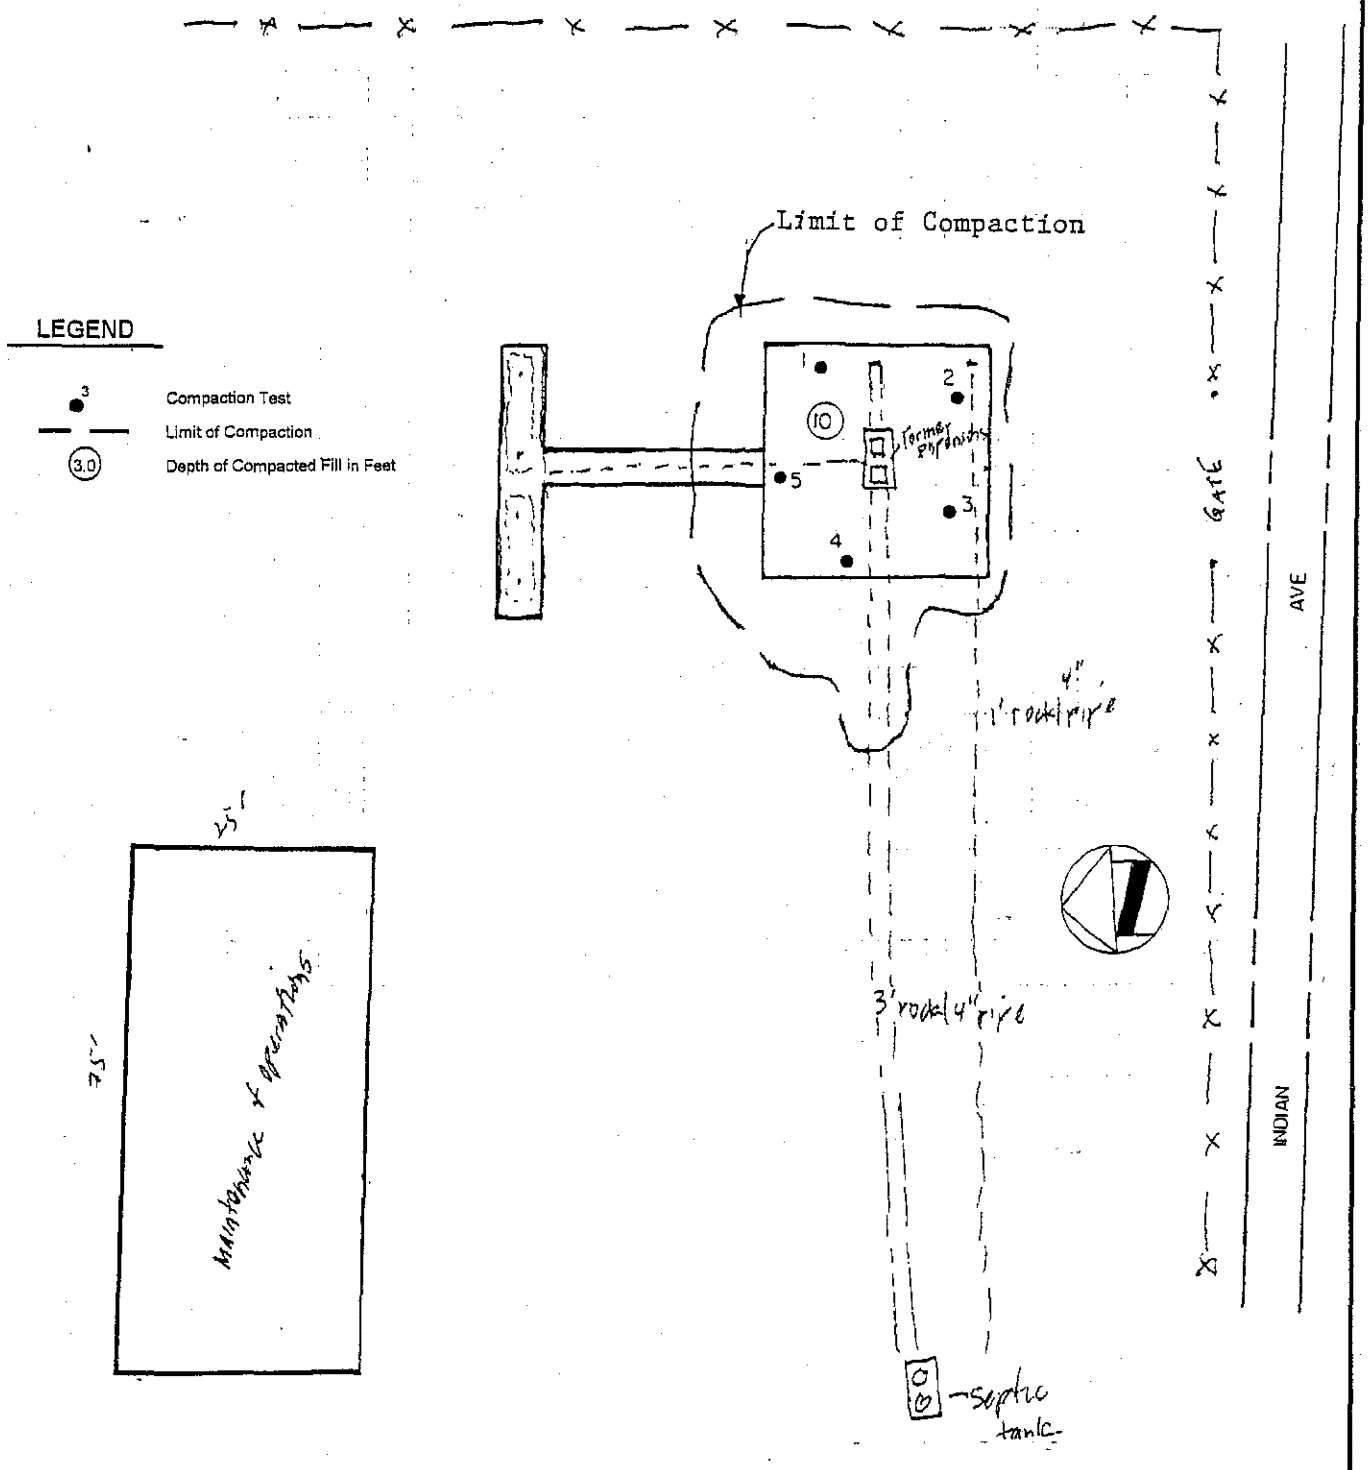

7.0 RECOMMENDATIONS

Based on the above conclusions, **Advanced Environmental Concepts, Inc.** recommends no further action and respectfully requests final closure for the underground storage tank portion of the site.

4400 ASHE ROAD #206 • BAKERSFIELD, CA 93313 661/831-1646 • FAX 661/831-1771

8.0 LIMITATIONS

This work has been performed in accordance with generally accepted environmental science and engineering practices. Conclusions and recommendations are based upon information collected and compiled during this investigation. Soil samples were collected from a finite grid, hence they are not meant to be misconstrued as indicative of unsampled surface or subsurface areas. No other warranty, expressed or implied, is given.

CERTIFICATE OF RECYCLING

Issued to: Advanced Environmental Concept, 4400 Ashe Road., Suite. 206, Bakersfield, CA
Generator: Val Verde Elementary School, 2656 Indian Avenue, Perris, CA
Manifest/Bill of Lading No: 99821054 Date Received: 06/29/00
Waste Product: PCB Ballasts

By accepting the waste products in the manifest/bill of lading referenced above, Earth Protection Services, Inc. (EPSI), certifies to the above-named generator that the transport, storage, processing and disposal methods employed by EPSI are in accordance with Toxic Substance Control Act (TSCA), Federal Regulations DOT 49 CFR, OSHA 29 CFR, EPA 40 CFR and all applicable State and Federal laws.

EPSI further certifies that:

- The Fluorescent light ballasts received on the above manifest/bill of lading have undergone mechanical processing to separate the capacitors and potting material from the recyclable metals.
- The recyclable metals have been separated and reclaimed in the form of ferrous metal, copper, and aluminum for resmelting purposes.
- The PCB capacitors and potting material will be shipped to an EPA approved Class 1 incinerator for final destruction.

Earth Protection Services, Inc., certifies that the information contained in or accompanying this document is true, accurate and complete, to the best of its knowledge.

Attention: Mr. Jonathan L. Buck

SUBJECT: **Results of Compaction Tests for a Cavity Backfill**
2656 Indian Avenue
Perris, California

Gentlemen:

This is to report the results of in-place density tests performed to evaluate degree of compaction of backfill placed in a cavity generated by removing of an underground tank at the subject site. The cavity was approximately 31 feet in depth and situated at the location shown on Plate 1. In-place density tests were taken at the site by a technician from our office on an intermittent basis, as required, during the period of backfilling.

The cavity was backfill with approximately 21 feet of rock prior to our onsite testing. The uppermost 10 feet was backfilled with a base material and fill soil. Fill was spread in lifts not exceeding 8 inches in thickness, moisture conditioned as necessary and compacted. Compaction was obtained by a track-rolling with construction equipment.

Laboratory compaction tests were performed on representative sample of the backfill materials in accordance with the ASTM D-1557-91 standard to determine the maximum density and optimum moisture content. The results are tabulated on Table One.

The in-place soil density was determined in accordance with the ASTM D-1556, standard method. The approximate test location is shown on Plate 1, attached and the test results are tabulated on Table Two.

The test results indicate that the backfill was compacted to at least 90 percent of the maximum dry density as determined by the ASTM D-1557-91 standard.

It should be realized that some settlement of the backfill is anticipated in the future. A soil detail investigation shall be performed if any future construction will encroach into the backfill area.

This report provides only the results of compaction tests taken at the locations and depths specified. No other warranty, expressed or implied, is made as to the professional advice included in this report.

This office assumes no responsibility for fill placed on the other portions of the site or for any subsequent changes to the site made by others after the final date of our testing. This report pertains only to the compaction described herein and is subject to review by the controlling agencies having jurisdiction.

Respectfully submitted,
HU ASSOCIATES, INC.

PHASE I ENVIRONMENTAL SITE ASSESSMENT DETERMINATION
VAL VERDE UNIFIED SCHOOL DISTRICT, VAL VERDE ELEMENTARY SCHOOL ADDITION, 2656 INDIAN AVENUE, PERRIS, CALIFORNIA

Dear Mr. Bush:

The Department of Toxic Substances Control (DTSC) has reviewed the Phase I Environmental Site Assessment (Phase I), dated August 2000, along with the Excavation Remediation Report (Appendix 10.5), received September 15, 2000. The Phase I was prepared for the subject site by Advanced Environmental Concepts, Inc. (AEC). The proposed project consists of a new building addition to the existing school. According to the Phase I, the site has been an operating elementary school since 1959. A 1953 aerial photograph survey indicated cultivation of alfalfa or dry farmed grain. The school had two Underground Storage Tanks (USTs) from the early 1970s until their removal in 1993. The former location of these tanks is approximately 50 feet east of the proposed new building. AEC conducted excavation and remediation activities to address hydrocarbons detected under the USTs. The County of Riverside, Health Services Agency, Department of Environmental Health approved the UST closure on August 15, 2000. Based on their review, AEC recommended "no further action" for the site.

Based on DTSC's review of the information presented in the Phase I, and a site visit on October 12, 2000, no actual or potential hazardous substance release was indicated which would pose a threat to human health or the environment. Therefore, DTSC concurs that no action is necessary with respect to investigation and remediation of the

site. As with any real property, if previously unidentified contamination is discovered at the site, additional assessment, investigation, and/or cleanup may be required.

If you have any questions regarding this determination, please contact Mr. Rao Akula, Project Manager at (818) 551-2847.

Sincerely,

for Hamid Saebfar, Chief
School Property Evaluation and Cleanup Division

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA)

of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
THE SALVATION ARMY EPA ID:: CAC002639494 EPA ID:: CAL000473736	***24201 ORANGE AVE***	***SW 0 - 1/8 (0.086 mi.)***	***D35***	***188***

SILVER CREEK INDUSTR EPA ID:: CA0001037498	***BARRETT AVE***	***NE 0 - 1/8 (0.094 mi.)***	***E41***	***243***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 8 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/03/2024 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 07/22/2024 has revealed that there are 7 CA ENVIROSTOR sites within approximately 1 mile of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/03/2024 has revealed that there are 30 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 07/01/2024 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

CRAFTECH METAL FORMI		W 1/8 - 1/4 (0.223 mi.)	L63	493

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 2 UST FINDER sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 4 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 07/24/2023 has revealed that there are 20 E MANIFEST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to

those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Citation:	23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description:	For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes:	Returned to compliance on 06/16/2021. OBSERVATION: Observed that Designated Operator inspections are being improperly performed. Observed DO inspections not completed within 30 days (1/2/21, 2/2/21, 3/31/21). CORRECTIVE ACTION: Owner/operator shall ensure that the Designated Operator is properly conducting inspections, noting observations, reviewing paperwork and alarm history reports, attaching required documentation and any other DO required functions.

Citation: HSC 6.75 25299.30-25299.34 - California Health and Safety Code, Chapter 6.75, Section(s) 25299.30-25299.34
Violation Description: Failure to submit and maintain complete and current Certification of Financial Responsibility or other mechanism of financial assurance.
Violation Notes: Returned to compliance on 07/02/2018.

MEQ T5 RLA LLC DBA TAKE 5 (Continued) **U003755858**

Violation Division:	Riverside County Department of Env Health
Violation Program:	UST
Violation Source:	CERS,
Site ID:	47886
Site Name:	Take 5 Oil Change
Violation Date:	06-29-2022
Citation:	HSC 6.7 25292.2(a) - California Health and Safety Code, Chapter 6.7, Section(s) 25292.2(a)
Violation Description:	Failure to submit and maintain complete and current Certification of Financial Responsibility or other mechanism of financial assurance.
Violation Notes:	Returned to compliance on 07/20/2022. OBSERVATION: Current Certification of Financial Responsibility documents have not been submitted to CERS and the UST system section of most recent CERS submittal was rejected for this reason. The financial responsibility uploaded to CERS expired 3/15/2022. Current financial responsibility that expires 3/2023 was available in folder on-site. CORRECTIVE ACTION: Owner/operator shall submit a current and complete Certification of Financial Responsibility in CERS.
Violation Division:	Riverside County Department of Env Health
Violation Program:	UST
Violation Source:	CERS,
Site ID:	47886
Site Name:	Take 5 Oil Change
Violation Date:	06-15-2020
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes:	Returned to compliance on 09/11/2020. OBSERVATION: The chemical inventory description page submitted for ATF and new oil contained incorrect amounts. Facility is missing inventory page for antifreeze drums on site. CORRECTIVE ACTION: Owner/operator shall update the chemical inventory page for [[[chemical name]]] and submit to the statewide information management system (e.g. CERS) at http://cers.calepa.ca.gov. Please refer to a current Safety Data Sheet (SDS) for guidance.

Violation Date:	09-09-2019
Citation:	40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description:	Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes:	Returned to compliance on 11/15/2019. OBSERVATION: Observed liquid in the secondary containment under the new oil drums. CORRECTIVE ACTION: Owner/operator shall maintain all secondary containment dry and clean, and manage according to Title 22 hazardous waste regulations. Submit a statement and supporting documentation (photos) explaining how this waste was managed to this department.

JUST TIRES #4840 (Continued) **S113161260**

Site Name: Just Tires #4840
Violation Date: 09-09-2019
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 11/15/2019. OBSERVATION: Observed two drums containing used absorbent on site without an accumulation start date. CORRECTIVE ACTION: Owner/operator shall ensure all hazardous wastes are transported off site within 180 days of the accumulation start date. Owner/operator shall have two drums containing used absorbent hazardous waste properly hauled off site by a registered hazardous waste transporter.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is

THE SALVATION ARMY (Continued) **1006826727**

used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

POTW:	Not reported
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

SILVER CREEK INDUSTRIES LLC (Continued) **1000985269**

Citation:	Un-Specified
Violation Description:	Business Plan Program - Operations/Maintenance - General Local Ordinance
Violation Notes:	Returned to compliance on 05/22/2023. OBSERVATION: Required NFPA-704 signs were not posted. CORRECTIVE ACTION: Owner/operator shall research chemical safety data sheets and post proper NFPA-704 signs. Signs shall be posted in compressed gases storage area. Submit photos to this department.
Violation Division:	Riverside County Department of Env Health
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	175290
Site Name:	Silver Creek Modular LLC
Violation Date:	03-06-2020
Citation:	40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description:	Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes:	Returned to compliance on 03/09/2020. OBSERVATION: Observed two waste paint totes and one 55 gallon waste oil drum without bung cap in place. CORRECTIVE ACTION: Owner/operator shall maintain all hazardous waste containers closed when not adding/removing hazardous waste.
Violation Division:	Riverside County Department of Env Health
Violation Program:	HW
Violation Source:	CERS,
Site ID:	175290
Site Name:	Silver Creek Modular LLC
Violation Date:	03-06-2020
Citation:	Un-Specified
Violation Description:	Business Plan Program - Operations/Maintenance - General Local Ordinance
Violation Notes:	Returned to compliance on 04/09/2020. OBSERVATION: Required NFPA-704 signs were not posted. CORRECTIVE ACTION: Owner/operator shall research chemical safety data sheets and post proper NFPA-704 signs. Signs shall be posted at the Diesel fuel/ Lubricating Oil Storage area . Submit photos to this department.

Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	175290
Site Name:	Silver Creek Modular LLC
Violation Date:	03-06-2020
Citation:	40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description:	Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes:	Returned to compliance on 03/09/2020. OBSERVATION: Observed one 55 gallon waste oil drum and two waste paint totes stored open with a funnel placed in the top opening of the totes. CORRECTIVE ACTION: Owner/operator shall store all hazardous waste containers closed, and manage according to Title 22 hazardous waste regulations. Submit a statement and supporting documentation (photos) explaining how this waste was managed to this department.

Violation Program:	HW
Violation Source:	CERS,
Site ID:	175290
Site Name:	Silver Creek Modular LLC
Violation Date:	03-06-2020
Citation:	Un-Specified
Violation Description:	Business Plan Program - Operations/Maintenance - General Local Ordinance
Violation Notes:	Returned to compliance on 03/19/2020. OBSERVATION: Observed an 8 gallon Propane tank that appeared to be "venting" through a relief valve. Propane was smelled in the area. CORRECTIVE ACTION: Owner/operator shall remove the cylinder away from the other cylinders and caution label the tank to prevent anyone from trying to use the cylinder. It should be stored in an open air location away from any sparks or flame and picked up by the Propane vendor as soon as possible. Provide an invoice showing the cylinder has been picked up by the vendor.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best

CORESLAB STRUCTURES LA , INC. (Continued) **S103958569**

management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Citation:	22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description:	Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes:	Returned to compliance on 12/05/2019. OBSERVATION: No manifests available during inspection. CORRECTIVE ACTION: Owner/operator shall obtain all manifests for hazardous waste shipments which occurred in the past 3 years. Manifests shall be made available for inspection.
Violation Division:	Riverside County Department of Env Health
Violation Program:	HW
Violation Source:	CERS,
Site ID:	144553
Site Name:	SR Bray LLC dba Power Plus
Violation Date:	08-05-2019
Citation:	HSC 6.5 25250.19(c) - California Health and Safety Code, Chapter 6.5, Section(s) 25250.19(c)
Violation Description:	"Failure to record in an operating log and retain for three years the following information for each shipment of recycled or exempted oil: 1) The name and address of the used oil recycling facility or generator claiming the oil meets the requirements of HSC 6.5 25250.1. 2) The name and address of the facility receiving the shipment. 3) The quantity of oil delivered. 4) The date of shipment or delivery. 5) A cross-reference to the records and documentation required under HSC 6.5 25250.1."
Violation Notes:	Returned to compliance on 10/10/2019. OBSERVATION: Facility is recycling used oil. No proper documentation observed during inspection. CORRECTIVE ACTION: Owner/operator shall complete proper certification for all used oil which is being recycled. Retain copies on site for a minimum of 3 years from date of disposal.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters

STAR MILLING CO (Continued) **1004442130**

of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Violations:

Site ID:	402847
Site Name:	Star Milling Company
Violation Date:	10-11-2019
Citation:	Un-Specified
Violation Description:	Business Plan Program - Operations/Maintenance - General Local Ordinance
Violation Notes:	Returned to compliance on 11/13/2019. OBSERVATION: Observed faded NFPA-704 signs located on the Alimet tank, the mold Inhibitor tank,

STAR MILLING CO (Continued) **1004442130**

lubricating oil storage area and the Diesel tank area . CORRECTIVE ACTION: Owner/operator shall replace all faded or otherwise unrecognizable NFPA-704 signs. Submit photos to this department.
Violation Division: Riverside County Department of Env Health
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 402847
Site Name: Star Milling Company
Violation Date: 11-28-2018
Citation: 2014-0057-DWQ - Industrial General Permit
Violation Description: SW - Deficient BMP Implementation
Violation Notes: Failure to contain non-Stormwater discharge made of industrial washwater.
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS,

Site ID: 402847
Site Name: Star Milling Company
Violation Date: 11-15-2022
Citation: Un-Specified
Violation Description: Business Plan Program - Operations/Maintenance - General Local Ordinance
Violation Notes: Returned to compliance on 11/15/2022. OBSERVATION: Observed gasoline pump not properly screwed into the bung opening allowing vapors to release into the atmosphere. CORRECTIVE ACTION: Owner/operator shall store all hazardous materials in a manner which will prevent an unauthorized fire, explosion, or release. Corrected on site. Pump was properly screwed into bung opening.
Violation Division: Riverside County Department of Env Health
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 402847
Site Name: Star Milling Company
Violation Date: 10-11-2019
Citation: 40 CFR 1 265.171 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.171
Violation Description: Failure to accumulate hazardous waste in a container that is in good condition.
Violation Notes: Returned to compliance on 11/12/2019. OBSERVATION: Observed one 55 gallon drum of oily dirt/absorbent being stored in non-structurally sound container, which may increase the likelihood of a release. CORRECTIVE ACTION: Owner/operator shall discontinue storing hazardous waste in damaged containers. Used absorbent/oily dirt shall be removed from damaged drum into a structurally sound drum or placed in an over-packing drum.
Violation Division: Riverside County Department of Env Health
Violation Program: HW
Violation Source: CERS,

Site ID: 402847
Site Name: Star Milling Company
Violation Date: 10-11-2019

STAR MILLING CO (Continued) **1004442130**

Violation Description:	Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.
Violation Notes:	Returned to compliance on 11/12/2019. OBSERVATION: Observed the presence of multiple hazardous waste violations at this facility. The presence of multiple violations indicates that inspections of the hazardous waste areas are not being conducted. CORRECTIVE ACTION: Owner/operator shall conduct weekly inspections of all hazardous waste storage areas.
Violation Division:	Riverside County Department of Env Health
Violation Program:	HW
Violation Source:	CERS,
Site ID:	402847
Site Name:	Star Milling Company
Violation Date:	10-11-2019
Citation:	HSC 6.5 25250.19(c) - California Health and Safety Code, Chapter 6.5, Section(s) 25250.19(c)
Violation Description:	"Failure to record in an operating log and retain for three years the following information for each shipment of recycled or exempted oil: 1) The name and address of the used oil recycling facility or generator claiming the oil meets the requirements of HSC 6.5 25250.1. 2) The name and address of the facility receiving the shipment. 3) The quantity of oil delivered. 4) The date of shipment or delivery. 5) A cross-reference to the records and documentation required under HSC 6.5 25250.1."
Violation Notes:	Returned to compliance on 11/13/2019. OBSERVATION: Facility is recycling used oil. No proper documentation observed during inspection. CORRECTIVE ACTION: Owner/operator shall complete proper certification for all used oil which is being recycled. Retain copies on site for a minimum of 3 years from date of disposal.
Violation Division:	Riverside County Department of Env Health
Violation Program:	HW
Violation Source:	CERS,
Site ID:	402847
Site Name:	Star Milling Company
Violation Date:	10-11-2019
Citation:	22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description:	Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes:	Returned to compliance on 11/13/2019. OBSERVATION: No manifests for 2016 were available during inspection and only one manifest for 2017 was available. CORRECTIVE ACTION: Owner/operator shall obtain all manifests for hazardous waste shipments which occurred in the past 3 years. Manifests shall be made available for inspection.

STAR MILLING CO (Continued) **1004442130**

	Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 10/12/2016.
Violation Division:	Riverside County Department of Env Health
Violation Program:	HW
Violation Source:	CERS,
Site ID:	402847
Site Name:	Star Milling Company
Violation Date:	10-11-2019
Citation:	40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description:	Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes:	Returned to compliance on 11/12/2019. OBSERVATION: Observed liquid in the secondary containment located on the south side of maintenance, absorbent pad on top of Gear oil drum saturated, staining on concrete under gear oil container, west side of maintenance observed several open 5 gallon buckets with liquid inside, and an open 55 gallon drum with oily dirt. CORRECTIVE ACTION: Owner/operator shall clean stains from concrete, storage all hazardous waste containers closed and dry, and immediately clean up any used absorbent, and manage according to Title 22 hazardous waste regulations. Submit a statement and supporting documentation (photos) explaining how this waste was managed to this department.

Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 11/13/2019. OBSERVATION: Observed one 55 gallon drum containing used coolant on site with accumulation start date of 9/13/18. CORRECTIVE ACTION: Owner/operator shall ensure all hazardous wastes are transported off site within 180 days of the accumulation start date. Owner/operator shall have one 55 gallon drum containing used Coolant properly hauled off site by a registered hazardous waste transporter.

Violation Date:	10-11-2019
Citation:	40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description:	Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes:	Returned to compliance on 11/12/2019. OBSERVATION: Observed 55 gallon drum of used Coolant without bung cap in place. CORRECTIVE ACTION: Owner/operator shall maintain all hazardous waste containers closed when not adding/removing hazardous waste. OBSERVATION: Observed one 55 gallon drum of used filters and one 55 gallon drum containing used absorbent/ oily dirt without cover/lid in place. CORRECTIVE ACTION: Owner/operator shall maintain all hazardous waste containers closed when not adding/removing hazardous waste.

Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 11/12/2019. OBSERVATION: Observed faded labels on 55 gallons drums of used filters and used absorbent/ oily dirt. CORRECTIVE ACTION: Owner/operator shall re-label hazardous waste containers with all the required information. Label shall include at least: the words "hazardous waste", generator name and address, accumulation start date, composition and physical state of waste, and hazardous property statement. Submit photos to this department, if applicable.

STAR MILLING CO (Continued) **1004442130**

Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: The driveway at the east end of the facility has a wheel wash activity required under the Newcastle Disease Biosecurity Guidelines. The wash water uses a mix made from a product called Virocid in a 40:1 dilution. The water runs out the driveway and down the gutter to the drainage at the end of Waters Street. The Permit only allows certain types of Non-Storm Water Discharges such as those in Section IV of the Permit. Therefore, Star Milling must stop discharging the runoff from the wheel washing. An acceptable method of disposal of the wash water may be to release the wash water into the sanitary sewer. Note that such a release must only be done with the permission of the sewering agency. The driveway mentioned above is one of the site's discharge points. There is another discharge point south of there near where the rail spur enters the property. Site staff stated they have never seen a discharge at that location. Site staff must conduct an inspection at the southerly discharge point during each rain event to ensure that a sample is taken should a discharge be occuring until the requisite number of samples for the half of the year is completed. After those two samples are obtained, the discharge point only needs to be observed during all rain events during business hours until one discharge is observed for the month. There is a large rolloff dumpster that was observed during the site visit. Regional Board staff discussed with site staff the fact that the Permit requires that all industrial waste containers be covered when they contain waste, but are not in use. Regional Board staff discussed that just using a tarp is not probably adequate because the tarp would pond water which would eventually cave the tarp in with the weight of the ponded water. We discussed that we had seen a frame of half round piping over which a tarp could be placed to effectively allow rain to run off the tarp.

STAR MILLING CO (Continued) **1004442130**

Eval Notes: The driveway at the east end of the facility has a wheel wash activity required under the Newcastle Disease Biosecurity Guidelines. The wash water uses a mix made from a product called Virocid in a 40:1 dilution. The water runs out the driveway and down the gutter to the drainage at the end of Waters Street. The Permit only allows certain types of Non-Storm Water Discharges such as those in Section IV of the Permit. Therefore, Star Milling must stop discharging the runoff from the wheel washing. An acceptable method of disposal of the wash water may be to release the wash water into the sanitary sewer. Note that such a release must only be done with the permission of the sewering agency. The driveway mentioned above is one of the site's discharge points. There is another discharge point south of there near where the rail spur enters the property. Site staff stated they have never seen a discharge at that location. Site staff must conduct an inspection at the southerly discharge point during each rain event to ensure that a sample is taken should a discharge be occuring until the requisite number of samples for the half of the year is completed. After those two samples are obtained, the discharge point only needs to be observed during all rain events during business hours until one discharge is observed for the month. There is a large rolloff dumpster that was observed during the site visit. Regional Board staff discussed with site staff the fact that the Permit requires that all industrial waste containers be covered when they contain waste, but are not in use. Regional Board staff discussed that just using a tarp is not probably adequate because the tarp would pond water which would eventually cave the tarp in with the weight of the ponded water. We discussed that we had seen a frame of half round piping over which a tarp could be placed to effectively allow rain to run off the tarp.

Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: On 2-6-15, staff met with Mr. Joe Steinmentz to inspect the site due to a request for NEC. Upon arrival, the SWPPP and inspection logs were reviewed. The SWPPP requires revision to include a new outfall in the front of the facility, installation of a sampler area, and BMPs involved. This company makes molds for sheet metal press to make airplane parts. The molds are made of metal (mainly zinc) and are stored outdoors in the back of the facility. Some of the molds had petroleum hydrocarbons and oils on them. One area where used parts are stored requires tarp cover to eliminate exposure. A curb in the secondary containment of one of the compressor units was cut and oil and grease was noted on the ground. The secondary containment should be repaired to avoid runoff or spills from this area. Outfall number 1 is connected to a large capacity in ground clarifier. The clarifier removes sediments and oil and grease. Mr. Steinmentz and Mr. Shaw were notified that due to exposure, they do not qualify for the NEC status. Furthermore, the parts in the back of the facility must be covered by a tarp. The County inspector has asked them to cover the molds and parts in the back as well. Billing and annual reports are all up-to-date. Staff will inspect the site again as soon as the proper fixes have been implemented.

Waste Description:	2h-1-Benzopyran-2-One, 4-Hydroxy-3-(3-Oxo-1-Phenylbutyl)-, & Salts, When Present At Concentrations Greater Than 0.3% (Or) Warfarin, & Salts, When Present At Concentrations Greater Than 0.3%
Waste Code:	P046
Waste Description:	Alpha,Alpha-Dimethylphenethylamine (Or) Benzeneethanamine, Alpha, Alpha-Dimethyl-
Waste Code:	P075
Waste Description:	Nicotine, & Salts (Or) Pyridine, 3-(1-Methyl-2-Pyrrolidinyl)-,(S)-, & Salts
Waste Code:	U002
Waste Description:	2-Propanone (I) (Or) Acetone (I)
Waste Code:	U034
Waste Description:	Acetaldehyde, Trichloro- (Or) Chloral
Waste Code:	U035
Waste Description:	Benzenebutanoic Acid, 4-[Bis(2-Chloroethyl)Amino]- (Or) Chlorambucil
Waste Code:	U058
Waste Description:	2h-1,3,2-Oxazaphosphorin-2-Amine, N,N-Bis(2-Chloroethyl)Tetrahydro-, 2-Oxide (Or) Cyclophosphamide
Waste Code:	U072
Waste Description:	Benzene, 1,4-Dichloro- (Or) P-Dichlorobenzene
Waste Code:	U080
Waste Description:	Methane, Dichloro- (Or) Methylene Chloride
Waste Code:	U112
Waste Description:	Acetic Acid, Ethyl Ester (I) (Or) Ethyl Acetate (I)
Waste Code:	U122
Waste Description:	Formaldehyde
Waste Code:	U129
Waste Description:	Cyclohexane, 1,2,3,4,5,6-Hexachloro-, (1alpha, 2alpha, 3beta, 4alpha, 5alpha, 6beta)- (Or) Lindane
Waste Code:	U132
Waste Description:	Hexachlorophene (Or) Phenol, 2,2'-Methylenebis[3,4,6-Trichloro-
Waste Code:	U134
Waste Description:	Hydrofluoric Acid (C,T) (Or) Hydrogen Fluoride (C,T)
Waste Code:	U150

WALMART NO 1747 (Continued) **1014387154**

Waste Description: L-Phenylalanine, 4-[Bis(2-Chloroethyl)Amino]- (Or) Melphalan

Waste Code: U154
Waste Description: Methanol (I) (Or) Methyl Alcohol (I)

Waste Code: U159
Waste Description: 2-Butanone (I,T) (Or) Methyl Ethyl Ketone (Mek) (I,T)

Waste Code: U165
Waste Description: Naphthalene

Waste Code: U182
Waste Description: 1,3,5-Trioxane, 2,4,6-Trimethyl- (Or) Paraldehyde

Waste Code: U188
Waste Description: Phenol

Waste Code: U200
Waste Description: Reserpine (Or) Yohimban-16-Carboxylic Acid, 11,17-Dimethoxy-18-[(3,4,5-Trimethoxybenzoyl)Oxy]-, Methyl Ester, (3beta, 16beta, 17alpha, 18beta, 20alpha)-

Waste Code: U205
Waste Description: Selenium Sulfide (Or) Selenium Sulfide Ses2 (R,T)

Waste Code: U210
Waste Description: Ethene, Tetrachloro- (Or) Tetrachloroethylene

Waste Code: U248
Waste Description: 2h-1-Benzopyran-2-One, 4-Hydroxy-3-(3-Oxo-1-Phenyl-Butyl)-, & Salts, When Present At Concentrations Of 0.3% Or Less (Or) Warfarin, & Salts, When Present At Concentrations Of 0.3% Or Less

Waste Code: U249
Waste Description: Zinc Phosphide Zn3p2, When Present At Concentrations Of 10% Or Less

Waste Code: U279
Waste Description: U279

Waste Code: U409
Waste Description: Carbamic Acid, [1,2-Phenylenebis (Iminocarbonothioyl)]Bis-, Dimethyl Ester (Or) Thiophanate-Methyl

Waste Code: U411
Waste Description: U411

Recognized Trader Importer: No
Recognized Trader Exporter: No
Spent Lead Acid Battery Importer: No
Spent Lead Acid Battery Exporter: No
Current Record: No
Non Storage Recycler Activity: Not reported
Electronic Manifest Broker: Not reported

Receive Date: 20141028
Handler Name: WALMART NO 1747
Federal Waste Generator Description: Not a generator, verified
State District Owner: Not reported
Large Quantity Handler of Universal Waste: No
Recognized Trader Importer: No
Recognized Trader Exporter: No
Spent Lead Acid Battery Importer: No
Spent Lead Acid Battery Exporter: No
Current Record: Yes
Non Storage Recycler Activity: Not reported
Electronic Manifest Broker: Not reported

List of NAICS Codes and Descriptions:
NAICS Code: 45291
NAICS Description: WAREHOUSE CLUBS AND SUPERCENTERS

Facility Has Received Notices of Violations:
Violations: No Violations Found

Evaluation Action Summary:
Evaluations: No Evaluations Found

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

DOLLAR TREE #02980 (Continued) **S123629415**

Site ID: 574287
Site Name: SPEEDY LUBE LLC
Violation Date: 03-29-2021
Citation: 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Description: Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.
Violation Notes: Returned to compliance on 06/21/2021.

Violation Description:	Failure to implement or maintain a written agreement between the UST owner and operator.
Violation Notes:	Returned to compliance on 02/24/2020.
Violation Division:	Riverside County Department of Env Health
Violation Program:	UST
Violation Source:	CERS,
Site ID:	93124
Site Name:	Arco Am/Pm
Violation Date:	08-03-2022
Citation:	23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description:	For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes:	Returned to compliance on 10/24/2022. OBSERVATION: Observed that the Designated Underground Storage Tank Operator Visual Inspection Reports are not being signed by the designated UST operator and the owner/operator. Specifically, inspection reports dated [insert report dates] are lacking owner/operator signatures. CORRECTIVE ACTION: Owner/operator shall ensure that the Designated Operator is properly conducting inspections, noting observations, reviewing paperwork and alarm history reports, attaching required documentation and any other DO required functions. Owner/operator is required to sign the Designated UST Operator Visual Inspection Report within 48 hours to acknowledge any compliance issues and take appropriate corrective action to correct compliance issues.

Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 08/03/2022. OBSERVATION: Observed 55 gallon metal drum of flammable liquid, four 55 gallon drums of non-hazardous purge water, and several fluorescent light bulbs on site without an accumulation start date. CORRECTIVE ACTION: Owner/operator shall ensure all hazardous wastes are transported off site within 180 days of the accumulation start date. Owner/operator shall have five 55 gallons drums of hazardous waste and the fluorescent light bulbs properly hauled off site by a registered hazardous waste transporter.

Citation:	23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at

NUEVO AM PM (Continued) **S113115204**

installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Citation: 23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes: Returned to compliance on 09/05/2023. OBSERVATION: Observed that the Designated Underground Storage Tank Operator Visual Inspection Reports are not being signed by the designated UST operator and the owner/operator. All of the DO reports from last year are lacking owner/operator signatures. CORRECTIVE ACTION: Owner/operator shall ensure that the Designated Operator is properly conducting inspections, noting observations, reviewing paperwork and alarm history reports, attaching required documentation and any other DO required functions. Owner/operator is required to sign the Designated UST Operator Visual Inspection Report within 48 hours to acknowledge any compliance issues and take appropriate corrective action to correct compliance issues. OBSERVATION: Observed that Designated Operator inspections are being improperly performed. Work Orders are missing for the month of March 2023 and DO inspections are not being completed within 30 days or less.. CORRECTIVE ACTION: Owner/operator shall ensure [Truncated]

CERS Description: Hazardous Waste Generator

Violations:
Site ID: 573094
Site Name: BURLINGTON STORE #1109
Violation Date: 06-16-2021
Citation: 40 CFR 1 262.34(d)(5)(ii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(ii)
Violation Description: Failure to post the following information next to the telephone: (A) The name and telephone number of the emergency coordinator; (B) Location of fire extinguishers and spill control material, and, if present, fire alarm; and (C) The telephone number of the fire department, unless the facility has a direct alarm.
Violation Notes: Returned to compliance on 08/10/2021. OBSERVATION: Observed emergency response information postings located in locked managers office; however, no emergency response postings were located in a conspicuous area that is available to all employees. CORRECTIVE ACTION: Owner/operator shall post required information to be available to all employees.
Violation Division: Riverside County Department of Env Health
Violation Program: HW
Violation Source: CERS,

Site ID: 573094
Site Name: BURLINGTON STORE #1109
Violation Date: 07-21-2021
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes: Returned to compliance on 08/20/2021. OBSERVATION: Observed manifest from 01/26/2021 Generator's Initial Copy; however, no other manifests were available at time of inspection. Facility does not get postal mail and has not received any manifests. CORRECTIVE ACTION: Owner/operator shall locate TSDF-signed copy of manifests.

Description:	RP states: 10 gallons of gasoline spilled while they were pumping gas. The gasoline was spilling from the bottom of the car. The spill has stopped, but RP states they will repair the car/gas tank at home. Spilled onto concrete at gas station. Cleanup is being conducted by gas station employees. This report is similar to 23-2427.

FINDS:
Registry ID: 110008277854

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different

PERRIS VALLEY CLEANERS (Continued) **1000593312**

systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/25/2024

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 05/20/2024

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

West Map:	50004756 STEELE PEAK, CA
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

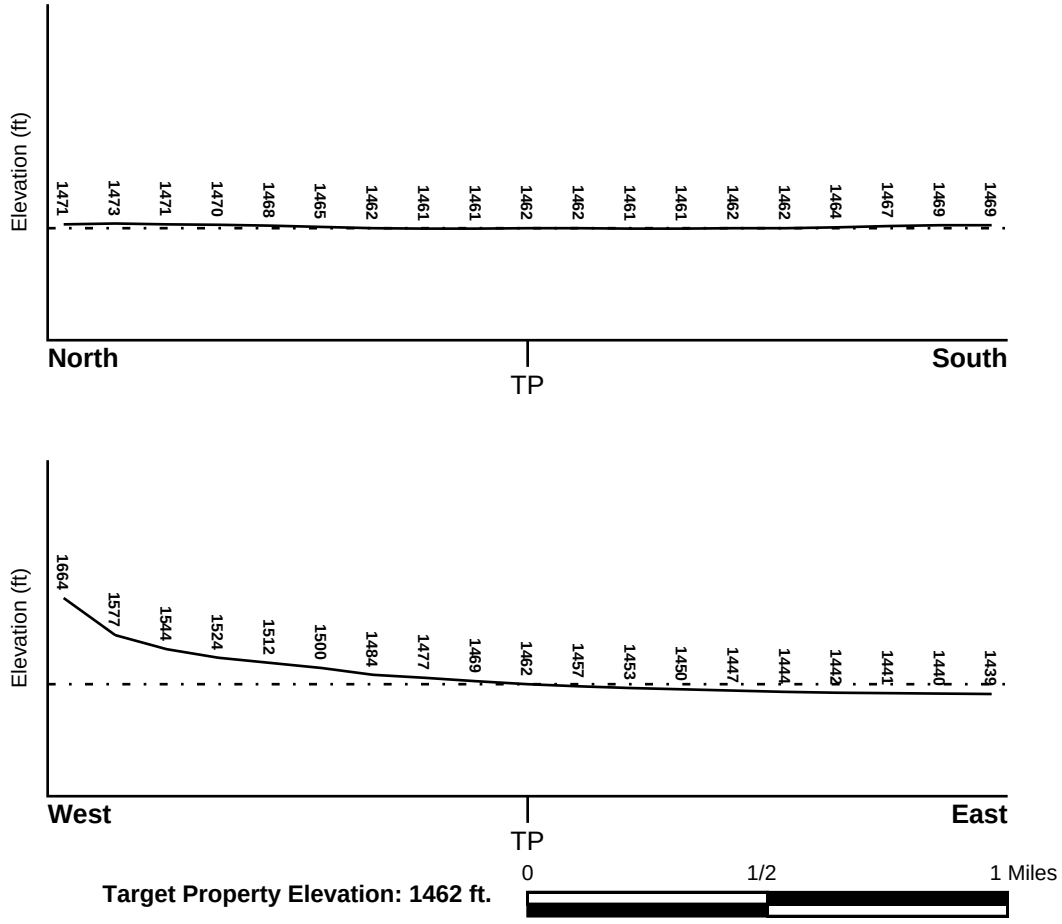

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 1462 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06065C1430H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06065C1410G	FEMA FIRM Flood data
06065C1440H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
NOT AVAILABLE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
E17	1/2 - 1 Mile West	Not Reported
1G	1/2 - 1 Mile West	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: PACHAPPA

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	20 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 7.8 Min: 6.6
2	20 inches	62 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 7.8 Min: 6.6

Soil Map ID: 2

Soil Component Name: GREENFIELD

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	25 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6
2	25 inches	42 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6
3	42 inches	59 inches	loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6
4	59 inches	72 inches	stratified loamy sand to sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6

Soil Map ID: 3

Soil Component Name: EXETER

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 4 Min: 1.4	Max: 8.4 Min: 7.4
2	16 inches	37 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 4 Min: 1.4	Max: 8.4 Min: 7.4
3	37 inches	50 inches	indurated	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 4 Min: 1.4	Max: 8.4 Min: 7.4
4	50 inches	59 inches	stratified sandy loam to silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 4 Min: 1.4	Max: 8.4 Min: 7.4

Soil Map ID: 4

Soil Component Name: RAMONA

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing
Department of Conservation
Telephone: 916-445-9686
Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division

Project Personnel Resumes

MADDIE PETERSON

Education

BA – Environmental Science and Policy, California State University, Long Beach, 2022
AA – Liberal Arts and Sciences/Communications, College of the Canyons, 2017

Specialty Certifications

40-Hour HAZWOPER Trained
SCAQMD Dust Control Officer Trained (Rule 403)

Professional Experience

Ms. Peterson is an Associate Professional who has participated in Phase I and II site investigations, sampling and monitoring at landfills, methane assessments, geophysical surveys and monitoring well installations, and pesticide and heavy metal evaluations. She has a background in environmental law and policy and sustainability. As an undergraduate, she performed heavy metal analysis and research regarding lead and zinc concentrations in soil samples for the Environmental Science and Policy Capstone Project in Long Beach (2022), and has volunteered for habitat restoration and other environmental improvement projects in Southern California.

Her SCS project work includes:

Phase I Environmental Site Assessments (ESAs). Ms. Peterson has contributed to Phase I Environmental Site Assessments (ESAs), completed in accordance with various lender, American Society for Testing and Materials (ASTM), or government guidelines. Activities consisted of evaluating current and past on-site operations, generating historical property use information, identifying potentially contaminated sites in the surrounding areas, reviewing previous reports and/or files maintained by regulatory agencies, and developing conclusions regarding the presence of Recognized Environmental Conditions (RECs) and recommendations for further investigation.

Site Investigations. Ms. Peterson has conducted soil gas surveys and soil sampling with precision mapping of sites, installation of soil borings, lithologic logging, collection of soil samples, and evaluation of subsurface contaminants in soil and groundwater in accordance with regulatory agency requirements or generally accepted guidelines.

Quarterly and Semiannual Groundwater Monitoring Reports. Ms. Peterson has assisted in preparation of numerous routine monitoring reports for various sites with oversight of various regulatory agencies. Facilities have included landfills across California and manufacturing sites.

Construction Quality Assurance (CQA). Ms. Peterson has assisted in CQA and oversight of the construction of gas collection and control system (GCCS) vertical well installation at Simi Valley, Antelope Valley, and El Sobrante Landfills.

Investigation and Remediation for Industrial Facility Redevelopment, Downey, CA. SCS conducted a series of environmental assessments, investigations, and remedial activities that provided sufficient information to identify the environmental issues, and business risks to facilitate the client's successful purchase of property for redevelopment to a commercial warehouse and office. A number of Recognized Environmental Conditions (RECs) were identified. Ms. Peterson provided oversight for numerous activities conducted concurrently with the redevelopment of the property, including the installation of groundwater monitoring wells, both on and off site; oversight of well development; soil vapor extraction (SVE) network monitoring; and permitting and removal of clarifiers.

J. JUSTIN RAUZON, REPA

Justin Rauzon, REPA

Education

MEM – Environmental Management, Duke University, 2014
BS – Zoology (Double Emphasis: Human and Marine Biology), Brigham Young University, 2004

Professional Licenses

Registered Environmental Property Assessor (REPA), National Registry of Environmental Professionals (No. 485639)

Specialty Certifications

OSHA 40-Hour Health and Safety Training for Hazardous Waste Workers
8-Hour Annual Refresher Training for Hazardous Waste Site Activities
OSHA 16-Hour Initial Asbestos Operations and Maintenance Training
Thermo Scientific Niton XRF Analyzer Operator's Training
First-Aid and CPR Training

Professional Affiliations

National Ground Water Association, Member (2015 to Present)
Industrial Environmental Association, Member (2018 to Present)

Professional Experience

Mr. Rauzon has more than 16 years of environmental services experience, all with SCS. Fluent in Spanish, Mr. Rauzon is an SCS Project Manager with a diverse background in biological and environmental sciences, and regularly performs environmental assessments and compliance audits at sites in the U.S. and in Latin America. He has technical and management experience with soil, soil vapor, and groundwater investigations at industrial, commercial, landfill, greenfield, and residential properties. He has extensive experience with environmental laws and regulations in both the U.S. and Mexico. His work experience includes all project phases, from development of cost estimates for various site assessment and cleanup programs to implementing remediation programs and interfacing with regulatory agencies. His experience with and understanding of these issues led to his appointment as a National Partner in Environmental Due Diligence in 2021.

Selected projects in which he has participated are described below.

Environmental Management

Due Diligence Assessments of Properties Prior to Real Estate Transfer of Properties in California, Arizona, New Jersey, Mexico, Puerto Rico, and the Dominican Republic. Mr. Rauzon has completed numerous due diligence assessments of properties prior to acquisition, disposition, or loan financing by investment banks, insurance companies, corporations, non-profit entities, real

estate developers, and private parties. Projects have included Phase I assessments that meet federal All Appropriate Investigation (AAI) regulations, American Society for Testing and Materials (ASTM) standards, and client-specific guidelines; inspections for asbestos and lead-based paint; Phase II investigations; preparation of abatement and remediation cost estimates; and regulatory agency coordination. These projects frequently involve review of previous environmental reports and investigation of current and past on-site operations, regulatory agency records searches, evaluation of historical property use information, identification of nearby potentially contaminated sites, and development of appropriate conclusions about environmental risks. Investigations involve preparation of work plans, soil boring and subsequent sampling, groundwater well installation and sampling, soil gas probe installation and sampling, precision mapping, evaluation of contaminants in accordance with regulatory requirements or generally accepted guidelines, preparation of investigation report, and analysis of applicable remedial alternatives. Mr. Rauzon has served as the Project Manager for sites that have received regulatory closure from various regulatory agencies.

Planning, Coordinating, and Supervising Remedial Actions That Included Excavation, Transport, and Disposal of Contaminated Soils and Water. Investigations involve preparation of Remedial Action Plans (RAPs), direction of fieldwork, oversight of confirmatory sampling, and interfacing with regulatory agencies.

Groundwater Monitoring and Reporting for Simi Valley Landfill and Recycling Center, Simi Valley, CA. Mr. Rauzon is a key team member for the sampling and monitoring of 10 groundwater wells and 5 leachate locations to evaluate potential releases from waste units affecting groundwater at Simi Valley Landfill. He also prepares the annual leachate control system's effectiveness reports and documents results of resampling of groundwater wells based on initial statistical indications of a release.

The Characterization of Hazardous Waste Materials. These projects include collection of soil and/or liquid samples to profile the waste materials, interpretation of laboratory results, and evaluation of disposal/recycling options to minimize the costs and liabilities to clients associated with the removal of wastes.

Assessment and Certification of Hazardous Waste Tank Systems. These investigations involve working with a Professional Engineer to complete field inspections of hazardous waste tanks, associated ancillary equipment, leak-detection systems, and secondary containment devices, as well as interfacing with regulatory agencies.

Project Management

Project Manager for Environmental Due Diligence Assessment and Health and Safety Program Review of Six Geothermal Power Plants Located in California, Nevada, New Mexico, and Utah. SCS services included time-sensitive field inspection, environmental document and permit review, and preparation of environmental risk evaluation reports. Mr. Rauzon reviewed and assessed plant health and safety plans and procedures; facility response plans; incident reports; and arrangements for plant selection, appointment, and management of support contractors. SCS provided support consulting services in the successful client plant acquisition and integration support.

Project Manager for Due Diligence Investigations at Dry Mill and Biofuel Distillery Plant, Madera, CA. SCS services included Phase I environmental assessment and Phase II soil, soil vapor, and groundwater investigation to support client's acquisition of an ethanol production plant at which a lumber mill was historically located. SCS provided additional consulting services related to remediation cost analysis and management of ongoing environmental issues.

Project Manager for Due Diligence Investigation of a Portfolio With More Than 300 Industrial Sites Throughout Mexico. SCS services included conducting Phase I and Phase II environmental assessments within the strict timeline of the $1.2 billion industrial real estate transaction. Subsequent to the closing of the deal, SCS provided ongoing consulting services to facilitate integration and management of various facilities with ongoing environmental issues.

Project Manager for Hazardous Materials Consulting Services in Support of the State Route 91 Corridor Improvement Project in Orange and Riverside Counties, CA. SCS services included sampling and inventory of potentially hazardous materials associated with more than 25 bridges along the SR-91 and I-15 freeways; environmental assessments on properties within the proposed freeway expansion area; and soil testing for herbicides, pesticides, and fungicides on several land parcels.

Project Manager for Investigation and Remediation of Industrial Facility Located in Fontana, CA. SCS conducted a series of environmental assessments, investigations, and remedial activities that provided sufficient information to identify environmental issues and business risks, and facilitate the client's successful purchase of property. A number of recognized environmental conditions, including releases of coal tar, solvents, heavy metals, and total petroleum hydrocarbons, were identified. Project activities conducted during the acquisition and redevelopment of the property included shallow and deep soil and soil vapor investigations; installation of groundwater monitoring wells and subsequent groundwater sampling; subsequent remedial excavation under San Bernardino County Fire Department (SBCFD) oversight to obtain closure; and excavation and off-site disposition of contaminated soil.

Health and Safety

Mr. Rauzon has participated in a certified health and safety program in compliance with OSHA Standard 29 CFR 1910.120. He is knowledgeable in incident response operations, team functions, personnel safety, and field equipment. He is able to recognize and evaluate potential chemical and physical hazards and associated risks in field operations; discuss and use personal protective equipment (PPE), such as respiratory protection and protective clothing; use and interpret direct-reading instruments; and examine and establish Standard Operating Safety Guidelines to ensure safe and effective response operations.
