RE: Perris Airport Logistics Center - PLN 22-05046, DPR 22-00005, CUP 23-05107

Sirs:

I am sure you're aware that the Perris Valley Airport recently marked its 90th year located in the City of Perris. I first visited the airport in the mid-1970s and have since watched in admiration and amazement as the airport's owners built a first-class facility for general aviation and sport parachuting. Skydive Perris is one of the premier destinations for international skydivers from both sport and military disciplines.

Now, I am concerned that the motorized truck transportation staging and warehousing development proposed for land adjacent to both sides of the airport's runways will interfere with the skydiving center's operations. I urge you to proceed with caution in considering the environmental impact of such a development, primarily because of two issues that directly affect the City of Perris' community, as follows:

- Air flow turbulence is a known problem around buildings. I urge you to review in detail the results of wind analysis studies for the Perris Valley Airport location where aircraft will be taking off and landing. The safety of the airport's customers and pilots, as well as the surrounding community, could be jeopardized by unseen turbulence on the runways and landing areas.
- Air pollution is a known factor in trucking industry operations. The airport is located on low-lying terrain where fog conditions—including harmful airborne particulates—tend to accumulate. I urge you to consider the environmental implications of allowing a known contributor of contaminants to build such a large facility so close to residential areas.

In closing, I hope you will make a responsible decision after considering all of the negative implications along with the financial advantages of the proposed development currently before you.

Sincerely,

Janet Works
