Foreword

This spreadsheet automates the Iterative Directional Volume Estimation Method originally developed and documented in NCHRP Report 255. The method is included in the body of materials developed and refined under NCHRP Project 08-83, which provides an update to NCHRP Report 255. The software does not represent a change to the original methodology; rather, its purpose is to provide a transparent

Instructions

This spreadsheet is intended for application on four-legged intersections. The following volumes are input by the user: 1) known turning movements; and 2) estimated or forecasted approach and departure volumes for each intersection leg. The spreadsheet performs the computations through six row and column iterations. Typically this will results in a desired closure within ± 10 percent. The user may desire to modify the spreadsheet to perform additional iterations by unprotecting the spreadsheet and copying the formulas into additional rows and columns. The user also may desire to modify the

With the exception of the designated cells where user input is required, all other cells are protected but

Delete all instances of "#DIV/0!"

Foreword

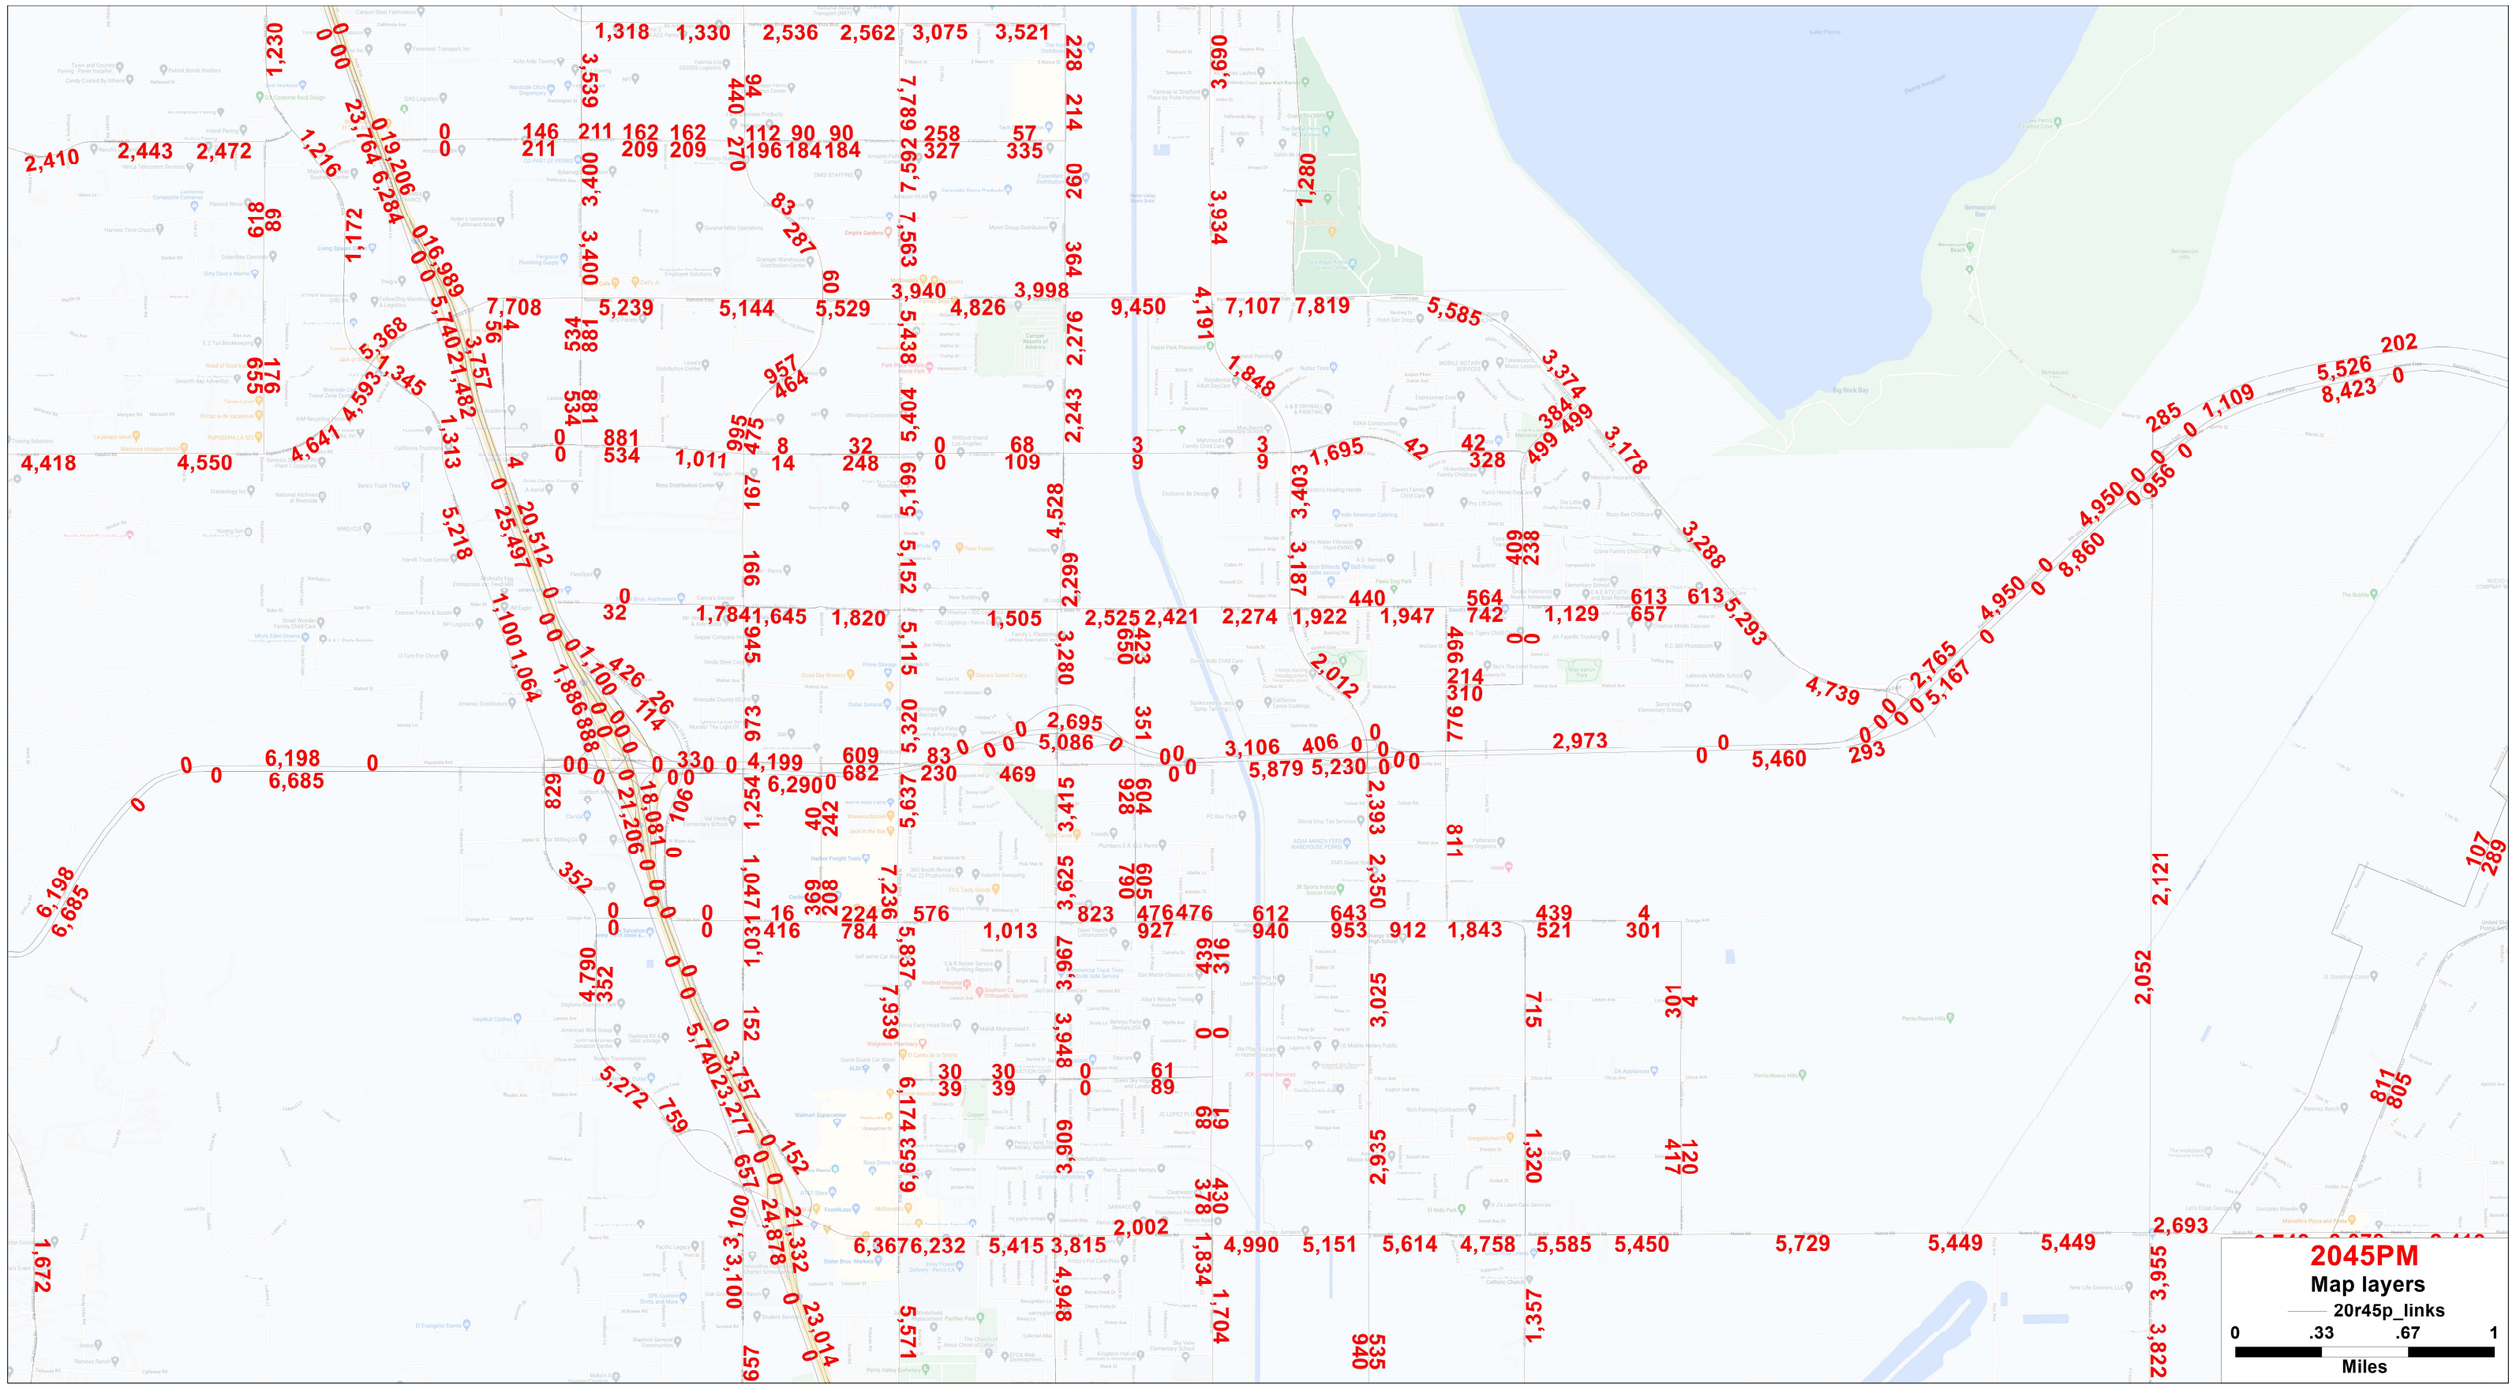

This spreadsheet automates the Iterative Directional Volume Estimation Method originally developed and documented in NCHRP Report 255. The method is included in the body of materials developed and refined under NCHRP Project 08-83, which provides an update to NCHRP Report 255. The software does not represent a change to the original methodology; rather, its purpose is to provide a transparent

Instructions

This spreadsheet is intended for application on four-legged intersections. The following volumes are input by the user: 1) known turning movements; and 2) estimated or forecasted approach and departure volumes for each intersection leg. The spreadsheet performs the computations through six row and column iterations. Typically this will results in a desired closure within ± 10 percent. The user may desire to modify the spreadsheet to perform additional iterations by unprotecting the spreadsheet and copying the formulas into additional rows and columns. The user also may desire to modify the

With the exception of the designated cells where user input is required, all other cells are protected but
